Robot Components and Systems François Lhôte, Pierre André, Jean-Pierre Taillard, Jean-Marie Kauffmann, 1987-06-30
The contemporary industrial robot is the focal point of a wide variety of elements in modern technology It is a collection of parts some of which act as drives and some of which act as architectural materials that give the robot body strength This book is a thorough inventory of the technologies involved and the way in which they meet and work together in order to produce a functional robot arm The authors have striven to describe thoroughly the components that make up robot arms This gives both the student and the practitioner a complete view of the principles involved in such components and the differences between existing technologies However it is not only the student who benefits from this approach but also the potential robot user who at the moment may be faced with a bewildering choice of combinations of different types of components in the robots that are available to him For example it is difficult for a production manager to appreciate the differences between robots that use direct current motors stepping motors and pneumatic actuators The authors have succeeded in structuring the book so that the reader can weigh up the pros and cons of these different techniques at whatever level of depth he requires Certainly the book aims to provide as much depth as there is in these topics without assuming a detailed knowledge of specialized areas of engineering Robot Technology François Lhôte, 1983 **Robot**

Robot Technology Igor Aleksander, Henri Farreny, Malik Ghallab, Claude Lurgeau, François Lhote, Alain Liégeois, Michel Parent, Jean Vertut, 1983 **Medical Robot Technology** Jingang Jiang, Dianhao Wu, Yongde Zhang, Xuesong Dai, 2024-11-28

This book mainly describes the basic principles, basic knowledge and application of medical robots. The book includes the characteristics and classification of the medical robot, the key technology of medical robot and the engineering research of clinical application of medical robot. While expounding the basic principles and knowledge, this book pays attention to its clinical application research. From the research background, research significance, key technologies and typical examples, hospital service robot, neurosurgery robot, vascular intervention robots, laparoscopic robot, capsule robot, prostate minimally invasive interventional robot and breast minimally invasive interventional robot, orthopedic robot, rehabilitation robot, complete denture tooth arrangement robot, orthodontic archwire bending robot and other medical robots are analyzed and described. On this basis, the development of medical robots is analyzed from the perspectives of policies and regulations, market, industry chain structure and technology. This book is suitable for researchers, senior undergraduate students and postgraduate students and industry practicing engineers in medical robots and biomedical engineering to consolidate the basic principles and knowledge and learn about the industry frontiers. And it also is suitable for clinicians to understand relevant engineering practices.

Cellular Robotics and Micro Robotic Systems Toshio Fukuda, Tsuyoshi Ueyama, 1994. This book introduces interesting topics from concepts to the latest research on cellular and micro robotic systems. The cellular robotic system is a self-organizing robotic system composed of a large number of autonomous robotic units named cells. This idea came from the organic structure of a living body. Several attractive topics in this area are covered such as swarm intelligence, communications and robotic mechanisms. The micro robotic system is currently the most fascinating technology. Micro mechanisms, control and intelligence with respect to this system are treated here. The combination of both technologies will prepare the way for a new paradigm in the field of engineering.

Robotics Goes MOOC Bruno Siciliano, 2025-06-08. It is often read in the media that AI and Robotics are the primary cause of technology unemployment. AI and machine learning techniques are expected to take over lower level tasks while humans can spend more time with higher level tasks. In perspective, it can be said that jobs requiring boring cognitive tasks or repeatable and dangerous physical tasks will be considerably shredded by automation thanks to the wide adoption of AI. Robotics technology to replace humans while jobs requiring challenging cognitive tasks or unstructured physical tasks will be suitably re-engineered with the progressive introduction of AI. Robotics technology to assist humans. From the discussion above, it should be clear that in a world populated by humans and robots, issues arise that go beyond engineering and technology due to the impact resulting from the use of robots in various application scenarios. The anthropization of robots cannot ignore the resolution of those ethical, legal, sociological, economic, ELSE problems that have so far slowed their spread in our society. The final book of the Robotics Goes MOOC project enlightens the impact of using robotic technology in the

main fields of application namely industrial robots as in Chapter 1 by Bischoff et al medical robotics as in Chapter 2 by Dario et al aerial robots as in Chapter 3 by Ollero et al orbital robotics as in Chapter 4 by Lampariello underwater robots in Chapter 5 by Antonelli and rescue robots as in Chapter 6 by Murphy The last part is devoted to the open dilemma of using and accepting robots in human co habited environments which is addressed in Chapter 7 on social robotics by Pandey and the very final chapter by Tamburrini on the important issues raised with roboethics
