purpose of cognition is to increase the agent s repertoire of effective actions and its power to anticipate the need for future actions and their outcomes and c development plays an essential role in the realization of these cognitive capabilities Our goal in this book is to identify the key design principles for cognitive development We do this by bringing together insights from four areas enactive cognitive science developmental psychology neurophysiology and computational modelling This results in roadmap comprising a set of forty three guidelines for the design of a cognitive architecture and its deployment in a humanoid robot The book includes a case study based on the iCub an open systems humanoid robot which has been designed specifically as a common platform for research on embodied cognitive systems **Designing Autonomous Agents** Pattie Maes,1990 Designing Autonomous Agents provides a summary and overview of the radically different architectures that have been developed over the past few years for organizing robots These architectures have led to major breakthroughs that promise to revolutionize the study of autonomous agents and perhaps artificial intelligence in general The new architectures emphasize more direct coupling of sensing to action distributedness and decentralization dynamic interaction with the environment and intrinsic mechanisms to cope with limited resources and incomplete knowledge The research discussed here encompasses such important ideas as emergent functionality task level decomposition and reasoning methods such as analogical representations and visual operations that make the task of perception more realistic Contents A Biological Perspective on Autonomous Agent Design Randall D Beer Hillel J Chiel Leon S Sterling Elephants Don t Play Chess Rodney A Brooks What Are Plans For Philip E Agre and David Chapman Action and Planning in Embedded Agents Leslie Pack Kaelbling and Stanley J Rosenschein Situated Agents Can Have Goals Pattie Maes Exploiting Analogical Representations Luc Steels Internalized Plans A Representation for Action Resources David W Payton Integrating Behavioral Perceptual and World Knowledge in Reactive Navigation Ronald C Arkin Symbol Grounding via a Hybrid Architecture in an Autonomous Assembly System Chris Malcolm and Tim Smithers Animal Behavior as a Paradigm for Developing Robot Autonomy Tracy L Anderson and Max Donath *Robotics: Concepts, Methodologies, Tools, and Applications* Management Association, Information Resources,2013-10-31 This book explores some of the most recent developments in robotic motion artificial intelligence and human machine interaction providing insight into a wide variety of applications and functional areas Provided by publisher
