Handbook of Robotics Bruno Siciliano, Oussama Khatib, 2008-05-20 With the science of robotics undergoing a major transformation just now Springer's new authoritative handbook on the subject couldn't have come at a better time. Having broken free from its origins in industry, robotics has been rapidly expanding into the challenging terrain of unstructured environments. Unlike other handbooks that focus on industrial applications, the Springer Handbook of Robotics incorporates these new developments. Just like all Springer Handbooks, it is utterly comprehensive, edited by internationally renowned experts and replete with contributions from leading researchers from around the world. The handbook is an ideal resource for robotics experts but also for people new to this expanding field. *Recent Trends In Mobile Robots* Yuan F

Zheng, 1994-01-14 This book presents recent trends in the field as perceived by a global selection of researchers and experts. Subjects covered include motion planning of mobile robots in unknown environments, coordination between mobility and manipulability, computation environments for mobile robots, nonlinear control of mobile robots, and environmental modeling using advanced sensing technologies. Issues ranging from progress in applications to fundamental problems are discussed.

Dynamics and Robust Control of Robot-environment Interaction Miomir Vukobratović, 2009 This book covers the most attractive problem in robot control: dealing with the direct interaction between a robot and a dynamic environment, including the human-robot physical interaction. It provides comprehensive theoretical and experimental coverage of interaction control problems, starting from the mathematical modeling of robots interacting with complex dynamic environments and proceeding to various concepts for interaction control design and implementation algorithms at different control layers. Focusing on the learning principle, it also shows the application of new and advanced learning algorithms for robotic contact tasks. The ultimate aim is to strike a good balance between the necessary theoretical framework and theoretical aspects of interactive robots. Intelligent Robots and Systems V. Graefe, 1995-09-27 Of the 300 papers

presented during IROS 94, 48 were selected because they are particularly significant and characteristic for the present state of the technology of intelligent robots and systems. This book contains the selected papers in a revised and expanded form. Robotics and intelligent systems constitute a very wide and truly interdisciplinary field. The papers have been grouped into the following categories: Sensing and Perception, Learning and Planning, Manipulation, Telerobotics and Space Robotics, Multiple Robots, Legged Locomotion, Mobile Robot Systems, Robotics in Medicine. Other additional fields covered include control, navigation, and simulation. Since many researchers in robotics are now apparently interested in some combination of learning, mobile robots, and robot vision, most of the articles included relate to at least one of these fields. Climbing and Walking Robots and the Support Technologies for Mobile Machines Phillippe Bidaud, Faiz Ben Amar, 2002-11-08 Robotic technology advances for a wide variety of applications. Climbing and Walking Robots and the Support Technologies for Mobile Machines explores the increasing interest in real-world robotics and the surge in research and invention it has inspired. Featuring the latest advances from leading robotics labs around the globe, this book presents solutions for perennial

challenges in robotics and suggests directions for future research With applications ranging from personal services and entertainment to emergency rescue and extreme environment intervention the groundbreaking work presented here provides a glimpse of the future **The Map-Building and Exploration Strategies of a Simple Sonar-Equipped Mobile Robot**
