Engineering Simulations as Scientific Instruments: A Pattern Language Susan Stepney, Fiona A.C. Polack, 2018-11-01 This book describes CoSMoS Complex Systems Modelling and Simulation a pattern based approach to engineering trustworthy simulations that are both scientifically useful to the researcher and scientifically credible to third parties This approach emphasises three key aspects to this development of a simulation as a scientific instrument the use of explicit models to capture the scientific domain the engineered simulation platform and the experimental results of running simulations the use of arguments to provide evidence that the scientific instrument is fit for purpose and the close co working of domain scientists and simulation software engineers In Part I the authors provide a managerial overview the rationale for and benefits of using the CoSMoS approach and a small worked example to demonstrate it in action Part II is a catalogue of the core patterns Part III lists more specific helper patterns showing possible routes to a simulation Finally Part IV documents CellBranch a substantial case study developed using the CoSMoS approach

Control in Robotics and Automation Bijoy K. Ghosh, T. J. Tarn, Ning Xi, 1999-04-09 Microcomputer technology and micromechanical design have contributed to recent rapid advances in Robotics Particular advances have been made in sensor technology that allow robotic systems to gather data and react intelligently in flexible manufacturing systems The analysis and recording of the data are vital to controlling the robot In order to solve problems in control and planning for a Robotic system it is necessary to meet the growing need for the integration of sensors in to the system Control in Robotics and Automation addresses this need This book covers integration planning and control based on prior knowledge and real time sensory information A new task oriented approach to sensing planning and control introduces an event based method for system design together with task planning and three dimensional modeling in the execution of remote operations Typical remote systems are teleoperated and provide work efficiencies that are on the order of ten times slower than what is directly achievable by humans Consequently the effective integration of automation into teleoperated remote systems offers potential to improve remote system work efficiency The authors introduce visually guided control systems and study the role of computer vision in autonomously guiding a robot system Sensor Based Planning and Control in an Event Based Approach Visually Guided Sensing and Control Multiple Sensor Fusion in Planning and Control System Integration and Implementation Practical Applications

Active Vision and Perception in Human-Robot Collaboration Dimitri Ognibene,Tom Foulsham,Giovanni Maria Farinella,Letizia Marchegiani,2022-03-07 *Decision Science and Technology* James Shanteau,Barbara A. Mellers,David A. Schum,2012-12-06 Decision Science and Technology is a compilation of chapters written in honor of a remarkable man Ward Edwards Among Ward s many contributions are two significant accomplishments either of which would have been enough for a very distinguished career First Ward is the founder of behavioral decision theory This interdisciplinary discipline addresses the question of how people actually confront decisions as opposed to the question of how they should make decisions Second Ward laid the groundwork for sound normative systems by noticing which tasks humans can do well and which tasks computers should perform This volume organized into five parts reflects those accomplishments and more The book is divided into four sections Behavioral Decision Theory examines theoretical descriptions and empirical findings about human decision making Decision Analysis examines topics in decision analysis Decision in Society explores issues in societal decision making The final section Historical Notes provides some historical perspectives on the development of the decision theory Within these sections major multi disciplinary scholars in decision theory have written chapters exploring some very bold themes in the field as an examination of the book s contents will show The main reason for the health of the Decision Analysis field is its close links between theory and applications that have characterized it over the years In this volume the chapters

by Barron and Barrett Fishburn Fryback Keeney Moreno Pericchi and Kadane Howard Phillips Slovic and Gregory Winkler and above all von Winterfeldt focus on those links Decision science originally developed out of concern with real decision problems and applied work such as is represented in this volume will help the field to remain strong

Robotics Goes MOOC Bruno Siciliano, 2025-02-04 A robot's appearance and its way of interacting with humans is of fundamental importance Until a few years ago there was a clear asymmetry between the typically excellent performance of industrial robots and their ugly and disharmonious bodies with crude ways and potentially very dangerous movements for the human environment A modern artifact can be as harmonious and beautiful as a complex biological machine or a work of plastic art and thus it should be clear how design plays a key role for robot technology to become a part of our everyday life and change it essentially in a responsible and beneficial manner It is designers who shape the interface between humans and machines and as such they will contribute to make robots as customizable and intuitively useful to inexperienced users according to a plug and play mode The new concept of robotronics as the mechatronics approach to designing advanced robots is the focus of the first chapter of the second book of the Robotics Goes MOOC project by Asfour et al The main issues for robot manipulator design are covered in the subsequent material namely redundant robots in Chapter 2 by Maciejewsky et al and parallel robots in Chapter 3 by Moller where widely adopted kinematic solutions are presented Then the adoption to flexibility as opposed to the rigid mechanics paradigm is discussed in Chapter 4 by Bertram et al with reference to elastic robots and in Chapter 5 by Laschi focused on soft robotics Somewhat speculating on the previous two design solutions comes Chapter 6 by Cutkosky dealing with bioinspired robots The last part of the book is devoted to robot locomotion namely Chapter 7 by Vendittelli on wheeled robots and Chapter 8 by Harada on biped humanoids

Consciousness in Humanoid Robots Antonio Chella, Angelo Cangelosi, Giorgio Metta, Selmer Bringsjord, 2019-06-05 Building a conscious robot is a scientific and technological challenge Debates about the possibility of conscious robots and the related positive outcomes and hazards for human beings are today no longer confined to philosophical circles Robot consciousness is a research field aimed at a two part goal on the one hand scholars working in robot consciousness take inspiration from biological consciousness to build robots that present forms of experiential and functional consciousness On the other hand scholars employ robots as tools to better understand biological consciousness Thus part one of the goal concerns the replication of aspects of biological consciousness in robots by unifying a variety of approaches from AI and robotics cognitive robotics epigenetic and affective robotics situated and embodied robotics developmental robotics anticipatory systems and biomimetic robotics Part two of the goal is pursued by employing robots to advance and mark progress in the study of consciousness in humans and animals Notably neuroscientists involved in the study of consciousness do not exclude the possibility that robots may be conscious This eBook comprises a collection of thirteen manuscripts and an Editorial published by Frontiers in Robotics and Artificial Intelligence under the section Humanoid Robotics and Frontiers in Neurorobotics on the topic Consciousness in Humanoid

Robots This compendium aims at collating the most recent theoretical studies models and case studies of machine consciousness that take the humanoid robot as a frame of reference The content in the articles may be applied to many different kinds of robots and to software agents as well **Proceedings of the Seventeenth Annual Conference of the Cognitive Science Society** Cognitive Science Society (U.S.). formalization is evaluated in several experiments in simulation and on real humanoid robots

Dance Notations and Robot Motion Jean-Paul Laumond, Naoko Abe, 2015-11-24 How and why to write a movement Who is the writer Who is the reader They may be choreographers working with dancers They may be roboticists programming robots They may be artists designing cartoons in computer animation In all such fields the purpose is to express an intention about a dance a specific motion or an action to perform in terms of intelligible sequences of elementary movements as a music score that would be devoted to motion representation Unfortunately there is no universal language to write a motion Motion languages live together in a Babel tower populated by biomechanists dance notators neuroscientists computer scientists choreographers roboticists Each community handles its own concepts and speaks its own language The book accounts for this diversity Its origin is a unique workshop held at LAAS CNRS in Toulouse in 2014 Worldwide representatives of various communities met there Their challenge was to reach a mutual understanding allowing a choreographer to access robotics concepts or a computer scientist to understand the subtleties of dance notation The liveliness of this multidisciplinary meeting is reflected by the book thank to the willingness of authors to share their own experiences with others

Intelligent Control and Applications for Robotics, Volume II Yimin Zhou, Chen Qiao, Huiyu Zhou, 2023-11-22 Driven by sustaining demands from industrial automation space applications and the lack of labor forces robotics has received increasing attention from researchers in the field of automation and control Optimizing control schemes is critical to fully exploit the potential of industrial and daily use robots Usually accuracy and repeatability are measured to evaluate the performance of a robot and deviation of the two parameters from normal status would inevitably leads to positional error and creates a problem for the process Moreover the repeatability of a robot is different in various parts of the working envelope fluctuating with speed and payload Due to the inherent complexity an advanced learning methodology is crucial to the self learning and fast adaptation to disturbances
