**Bonds That Tie: Chemical Heritage and the Rise of Cannabis Research** J. N. Campbell, 2020-10-23 This book traces the global chemical history of cannabidiol CBD which is a compound that originates partially from hemp the fiber marijuana the popularized term for medicinal recreational use and cannabis the species sativa It also argues about the position that CBD is in today and the heritage established by chemists over the course of its development Each term associated with the plant spans centuries of development and cross culturally became an object of cultivation and commerce Humans have explored cannabis complex chemical possibilities with the hope that it would offer pain relief or some type of mind numbing portal to other existences As such the trio and their many incarnations have been and will continue to be an integral part of the past the present and the future Known as cannabis compound cannabidiol CBD a non psychoactive component of the drug it is one of some 100 plus known cannabinoids offshoots of the original plant that are isolated and in some cases chemically altered Just as with any supposed pharmaceutical marvel chemists are at the center of this narrative In order to understand its historical roots central to CBD s discovery was the efforts of scientists who worked in separate eras and regions These included Americans Roger Adams and Allyn Howlett and the Bulgarian born Israeli chemist Raphael Mechoulam along with a throng of others They influenced a generation of students and changed the face of cannabis research into the 21st century What does its history tell us about the future of chemical products like CBD This brief will explore the chemical heritage that formed across a complicated nexus of global events These are the bonds that tie

**Chemistry in America 1876-1976** A. Thackray, J.L. Sturchio, P.T. Carroll, R.F. Bud, 2012-12-06 This study is an outgrowth of our interest in the history of modern chemistry The paucity of reliable quantitative knowledge about past science was brought home forcibly to us when we undertook a research seminar in the comparative history of modern chemistry in Britain Germany and the United States That seminar which took place at the University of Pennsylvania in the spring of 1975 was paralleled by one devoted to the work of the Annales School The two seminars together catalyzed the attempt to construct historical measures of change in aspects of one science or chemical

indicators The present volume displays our results Perhaps our labors may be most usefully compared with the work of those students of medieval science who devote their best efforts to the establishment of texts Only when acceptable texts have been constructed from fragmentary and corrupt sources can scholars move on to the more satisfying business of making history So too in the modern period a necessary preliminary to the full history of any scientific profession is the establishing of reliable quantitative information in the form of statistical series This volume does not offer history Instead it provides certain element indicators that may be useful to individuals interested in the history of American chemistry and chemical industry and suggestive for policy

**Biographies of Scientists for Sci-Tech Libraries** Tony Stankus, 2019-12-05 This book first published in 1991 is an invaluable guide to biographies of scientists from a wide variety of scientific fields The books selected for this highly descriptive bibliography help librarians shatter readers stereotypes of scientists as monomaniacal and uninteresting people by providing interesting and provocative titles to capture the interest of students and other readers The biographies included in this very special bibliography were carefully selected for their humour and human insights to give future scientists encouragement inspiration and an understanding of the origins of particular scientific fields These biographies are unique in that they explore the whole personality of the scientist giving students a glimpse at the variety and drama of the lives beyond well known contributions or Nobel prize accomplishments

**No Boundaries** Lillian Hoddeson, 2004 Like any great university the University of Illinois owes its prominence to the excellence of its faculty In Lillian Hoddeson's No Boundaries twenty three scholars provide easily accessible vignettes about University of Illinois faculty who have made major contributions to their fields to knowledge and to the world Here are many of the most inspiring and often most amusing people whose work elevated the University of Illinois into a world leader in a variety of areas Their lives demonstrate again and again that the work of the University takes place as much away from campus as on it Oscar Lewis's pioneering studies of poverty in Mexico for example Ralph Grim's geological work in Africa and Nathan Newmark's architectural work in Mexico City Here also are insights into the remarkable careers of classicist William Oldfather chemist Roger Adams the amazing double Nobel Prize winning physicist John Bardeen and accounts of Katharine Sharp's work that made the University of Illinois Library into a national treasure Also included are the legendary contributions of the University of Illinois to computer science biochemistry history literary study and electronic music

*Enough for One Lifetime* Matthew E. Hermes, 1996 This is a story of invention and chemistry and the ineluctable fate of the inventor of nylon Wallace Carothers was hired by DuPont in 1928 to lead a program called basic research Carothers brought a passion to his work and wanted to synthesize large molecules that would challenge Emil Fischer's largest molecule of 4200 molecular weight In a burst of creativity in the spring of 1930 Carothers gave us our first truly synthetic rubber and fiber The rubber quickly became neoprene the fiber in time led to nylon Carothers took an infant science called polymer chemistry defined it and guided it toward its present maturity He gave us condensation polymerization Hermes tells

Carothers story his sudden dramatic research successes and his relentless slide into depression alcohol and suicide through Carothers revealing letters to his professional colleagues Roger Adams C S Marvel John R Johnson and his family and college classmates At the end Carothers habit was to hide himself from his co workers and friends Hermes narrative searches for the shrouded heart of the inventor s story by using stories of F Scott Fitzgerald and other contemporaries as parables from which Carothers truth may be drawn

Contrasts in Scientific Style Joseph Stewart Fruton,1990 Recounts the various styles of leadership shown by several prominent German chemists and biochemists during the period 1830 to 1914 Featured particularly are chemists Liebig Baeyer and Emil Fischer and biochemists Hoppe Seyler Kuhne and Hofmeister In a final chapter Fruton considers the relevance of the conclusions drawn from the style of these 19th and early 20th century men to the styles of more recent research groups in the chemical and biochemical sciences Special emphasis is placed on their influence on their scientific progenies in Germany and in England Russia and the U S Attention is given to the individual contributions of the junior members of these scientific groups to the growth of knowledge within their disciplines

*The American Synthetic Organic Chemicals Industry* Kathryn Steen,2014-08-03 Prior to 1914 Germany dominated the worldwide production of synthetic organic dyes and pharmaceuticals like aspirin When World War I disrupted the supply of German chemicals to the United States American entrepreneurs responded to the shortages and high prices by trying to manufacture chemicals domestically Learning the complex science and industry however posed a serious challenge This book explains how the United States built a synthetic organic chemicals industry in World War I and the 1920s Kathryn Steen argues that Americans intense anti German sentiment in World War I helped to forge a concentrated effort among firms the federal government and universities to make the United States independent of foreign chemicals Besides mobilization efforts to make high explosives and war gases federal policies included protective tariffs gathering and publishing market information and most dramatically confiscation of German owned chemical subsidiaries and patents Meanwhile firms and universities worked hard to develop scientific and manufacturing expertise Against a backdrop of hostilities and intrigue Steen shows how chemicals were deeply entwined with national and international politics and policy during the war and subsequent isolationism of the turbulent early twentieth century

Women Scientists in America Margaret W. Rossiter,1998-09-29 Winner of the Pfizer Award for Outstanding Book in the History of Science Margaret Rossiter s widely hailed *Women Scientists in America* Struggles and Strategies to 1940 marked the beginning of a pioneering effort to interpret the history of American women scientists That effort continues in this provocative sequel that covers the crucial years of World War II and beyond Rossiter begins by showing how the acute labor shortage brought on by the war seemed to hold out new hope for women professionals especially in the sciences But the public posture of welcoming women into the scientific professions masked a deep seated opposition to change Rossiter proves that despite frustrating obstacles created by the patriarchal structure and values of universities government and industry women scientists made genuine contributions to their fields

grew in professional stature and laid the foundation for the breakthroughs that followed 1972 *Prometheans in the Lab* Sharon Bertsch McGrayne, 2001 Table of contents includes Soap and Nicholas Leblanc Color and William Henry Perkin Sugar and Norbert Rillieux Clean water and Edward Frankland Fertilizer poison gas and Fritz Haber Leaded gasoline safe refrigeration and Thomas Midgley Jr Nylon and Wallace Hume Carothers DDT and Paul Hermann Muller Lead free gasoline and Clair C Patterson *The American Synthetic Rubber Research Program* Peter J. T. Morris, 2017-01-30 This history of the government funded synthetic rubber research program 1942 1956 offers a rare analysis of a cooperative research program geared to the improvement of existing products and the creation of new ones The founders of the program believed the best way to further research in the new field was through collaboration among corporations universities and the federal government Morris concludes that in fact the effort was ultimately a failure and that vigorous competition proves the best way to stimulate innovation Government programs like the rubber research program are far better at improving existing products the author contends than creating wholly new ones **Introducing the Chemical Sciences** Chemical Heritage Foundation, 1997 An introductory guide that is designed particularly for teachers and their students but is useful in many other contexts This new edition lists reference works histories of science and technology histories of the chemical sciences and industries including company histories autobiographies and biographies edited classical texts and journals

*Biographical Memoirs* National Academy of Sciences, 2001-08-27 Biographic Memoirs Volume 79 contains the biographies of deceased members of the National Academy of Sciences and bibliographies of their published works Each biographical essay was written by a member of the Academy familiar with the professional career of the deceased For historical and bibliographical purposes these volumes are worth returning to time and again **Historical Dictionary of Nuclear, Biological, and Chemical Warfare** Benjamin C. Garrett, 2017-08-25 The history of biological weapons BW chemical weapons CW and nuclear weapons is complicated It can be disturbing tragic and occasionally encouraging It is rarely amusing although the names selected for certain weapons suggest a casualness toward the consequences of their use Atomic Annie Blue Peacock Dew of Death Fat Man Flying cow George Gilda Helen of Bikini Hurricane Katie Little Boy Lulu Mike Red Beard Sewer Pipe Squirt Use of BW and CW in warfare has produced mixed results in terms of effecting the outcome of a battle or campaign despite this mixed record both weapon types have attracted intense interest and strong advocacy for further use The sole experience with use of nuclear weapons in warfare is viewed as hastening surrender by Japan created competition among nations to develop more such weapons and influenced efforts to ban any use or even stockpiling of such weapons Each of these three weapon types has its own peculiar history as recounted in this dictionary This second edition of Historical Dictionary of Nuclear Biological and Chemical Warfare contains a chronology an introduction and an extensive bibliography The dictionary section has over 700 cross referenced entries on terms related to NBC warfare ranging from basic descriptions of substances used to details on incidents and episodes where NBC weapons

were used historical events persons important to NBC warfare countries where such weapons have been developed or used and international treaties and treaty related organizations

**Inventing Polymer Science** Yasu Furukawa,2016-11-11 It would be difficult to overestimate the importance of polymer science to life in the twentieth century Developments in polymer chemistry and engineering have led not only to the creation of a variety of substances such as synthetic fibers synthetic rubber and plastic but also to discoveries about proteins DNA and other biological compounds that have revolutionized western medicine For these reasons the history of the discipline tells an important story about how both our material and intellectual worlds have come to be as they are Yasu Furukawa explores that history by tracing the emergence of macromolecular chemistry the true beginning of modern polymer science It is a lively book given human interest through its focus on the work of two of the central figures in the development of macromolecular chemistry Hermann Staudinger and Wallace Carothers In *Inventing Polymer Science* Furukawa examines the origins and development of the scientific work of Staudinger and Carothers illuminates their different styles in research and professional activities and contrasts the peculiar institutional and social milieus in which they pursued their goals
