P. S. Bajaj,2012-12-06 **Haploids in Crop Improvement I** Y. P. S. Bajaj,2012-12-06 Haploid plants have the gametophytic number of chromosomes They are of great importance especially in studies on the induction of mutations and also for the production of homozygous plants they are needed in large numbers The conventional methods employed by plant breeders for their production are cumbersome time consuming laborious and rather inefficient Sometimes it may take years to produce a pure line However with the introduction of in vitro techniques especially anther culture for the induction of androgenesis it has become increasingly evident that these methods considerably accelerate the production of haploids for plant breeding programs During the last decade in vitro produced haploids have been incorporated into breeding programs of many agricultural crops and positive results have been obtained especially with rice wheat potato barley maize asparagus sunflower brassica tobacco etc Among these rice and wheat are the best examples in which a number of improved varieties have been released In wheat the breeding cycle can be shortened by three or four generations when the pollen haploid breeding method is used instead of conventional cross breeding The release of the wheat varieties Jinghua 1 and Florin is a typical example of what can be achieved with other crops Taking these developments into consideration the present volume Haploids in Crop Improvement I was compiled **Ethnopharmacological Properties, Biological Activity and Phytochemical Attributes of Medicinal Plants Volume 4** Bharat Singh,2023-10-24 This book covers the morphological characteristics ethnopharmacological properties isolated and identified structurally diverse secondary metabolites biological and pharmacological activities of medicinal plants Ethnopharmacology is the systematic study of folklore traditional medicines which continue to provide innovative drugs and lead molecules for the pharmaceutical industry In fact plant secondary metabolites used as a single molecule or as a mixture are medicines that can be effective and safe even when

synthetic drugs fail Therefore the description of these secondary metabolites as well as methods for the targeted expression and or purification is of high interest In addition to surveying the morphological features ethnopharmacological properties biological and pharmacological activities and studies of clinical trials this book offers a comprehensive treatment of 56 plant species It also presents the cell culture conditions and various methods used for increasing the production of medicinally important secondary metabolites in plant cell cultures This volume Provides the morphological features habitat and distribution of each species of 56 genera selected from the different regions of the world Presents ethnopharmacological applications of various species of the 56 genera in this book Different species of 56 genera are used for ethnomedicinal uses by the people of various countries of the world Describes structures of various secondary metabolites identified in 56 plant species together with their biological and pharmacological activities Discusses strategies of secondary metabolites production such as organ culture pH elicitation hairy root cultures light and mutagenesis Provides a complete overview of each species of 56 genera and the complete information up to 2022 Ethnopharmacological Properties Biological Activity and Phytochemical Attributes of Medicinal Plants is an important book for undergraduate and postgraduate students pharmacologists phytochemists Ayurvedic practitioners medical doctors and biotechnologists interested in the ethnopharmacological properties phytochemistry biological and pharmacological activities of plants

Plant Protoplasts and Genetic Engineering III Y. P. S. Bajaj, 2012-12-06 In continuation of Volumes 8 and 9 1989 on in vitro manipulation of plant protoplasts this new volume deals with the regeneration of plants from protoplasts and genetic transformation in various species of Agrostis Arabidopsis Atropa Brassica Catharanthus Datura Cucumis Daucus Digitalis Duboisia Eustoma Festuca Helianthus Hordeum Kalanchoe Linum Lobelia Lolium Lotus Lycium Lycopersicum Mentha Nicotiana Pelargonium Pisum Pyrus Salvia Scopolia and Solanum These studies reflect the far reaching implications of protoplast technology in genetic engineering of plants They are of special interest to researchers in the field of plant tissue culture molecular biology genetic engineering and plant breeding

Medicinal and Aromatic Plants Tariq Aftab, Khalid Rehman Hakeem, 2021-03-27 Before the concept of history began humans undoubtedly acquired life benefits by discovering medicinal and aromatic plants MAPs that were food and medicine Today a variety of available herbs and spices are used and enjoyed throughout the world and continue to promote good health The international market is also quite welcoming for MAPs and essential oils The increasing environment and nature conscious buyers encourage producers to produce high quality essential oils These consumer choices lead to growing preference for organic and herbal based products in the world market As the benefits of medicinal and aromatic plants are recognized these plants will have a special role for humans in the future Until last century the production of botanicals relies to a large degree on wild collection However the increasing commercial collection largely unmonitored trade and habitat loss lead to an incomparably growing pressure on plant populations in the wild Therefore medicinal and aromatic plants are of high priority for conservation Given the above we bring forth a comprehensive volume

Medicinal and Aromatic Plants Healthcare and Industrial Applications highlighting the various healthcare industrial and pharmaceutical applications that are being used on these immensely important MAPs and its future prospects This collection of chapters from the different areas dealing with MAPs caters to the need of all those who are working or have interest in the above topic

Wheat Y. P. S. Bajaj, 2013-03-09 Wheat which is the second most important cereal crop in the world is being grown in a wide range of climates over an area of about 228 945 thousand ha with a production of about 535 842 MT in the world Bread wheat *Triticum aestivum* L accounts for 80% of the wheat consumption however it is attacked by a large number of pests and pathogens rusts and smuts cause enormous damage to the crop and reduce the yield drastically in some areas The major breeding objectives for wheat include grain yield earliness resistance to lodging and diseases spikelet fertility cold tolerance leaf duration and net assimilation rate fertilizer utilization coleoptile length nutritional value organoleptic qualities and the improvement of characters such as color and milling yield The breeding of wheat by traditional methods has been practiced for centuries however it has only now come to a stage where these methods are insufficient to make any further breakthrough or to cope with the world's demand Although numerous varieties are released every year around the world they do not last long and long term objectives cannot be realized unless more genetic variability is generated Moreover the introduction of exotic genetic stocks and their cultivation over large areas results in the depletion and loss of the native germplasm pool

Somaclonal Variation in Crop Improvement I Professor Dr. Y. P. S. Bajaj, 2013-03-14 **Tobacco BY-2 Cells** Toshiyuki Nagata, Seiichiro Hasezawa, Ann Depicker, 2004-01-30 The first compilation of a wealth of knowledge on tobacco BY 2 cells often cited as the HeLa cell line of higher plants Basic issues of cell cycle progression cytokinesis cell organization and factors that are involved in these processes are covered in detail Since the tobacco cell line is used as a tool for research in molecular and cellular biology several chapters on such studies are also included Further changes of primary and secondary metabolites during culture and factors that affect these processes are treated Last but not least the so far unpublished historical background of the BY 2 cell line is described This volume is a must for any scientist working in the field of plant biology
