**Membrane Fluidity in Biology** Roland C. Aloia, Joan M. Boggs, 2013-09-24 Membrane Fluidity in Biology Volume 3 Disease Processes focuses on the relationship of membrane lipid alterations and membrane fluidity to various pathological conditions providing unique phenomenological conceptualizations of disease states This book compiles comprehensive reviews on topics such as respiratory distress syndrome diabetes and receptor function muscular dystrophies atherosclerosis alcohol membrane effects and lymphocyte function and cancer This publication also evaluates the interplay between membrane lipid alterations and membrane fluidity and abnormal cellular function emphasizing how possible alterations in membrane lipids and cholesterol and consequent changes in membrane fluidity can influence normal cellular activity and lead to pathological cellular function This volume is intended for molecular and cellular biologists clinician scientists struggling with an understanding of the mechanisms of pathological processes and biophysicists seeking research problems in pathology to study **The Ecology of Biological Invasions**, 1987 **Nickel and Its Surprising Impact in Nature** Astrid Sigel, Helmut Sigel, Roland K. O. Sigel, 2007-03-13 Helmut Sigel Astrid Sigel and Roland K O Sigel in close cooperation with John Wiley Sons launch a new Series Metal Ions in Life Sciences The philosophy of the Series is based on the one successfully applied to a previous series published by another publisher but the move from biological systems to life sciences will open the aims and scope and allow for the publication of books touching on the interface between chemistry biology pharmacology biochemistry and medicine Volume 2 focuses on the vibrant research area concerning nickel as well as its complexes and their role in Nature With more than 2 800 references and over 130 illustrations it is an essential resource for scientists working in the wide range from inorganic biochemistry all the way through to medicine In 17 stimulating chapters written by 47 internationally recognized experts Nickel and Its Surprising Impact in Nature highlights critically the biogeochemistry of nickel its role in the environment in plants and cyanobacteria as well as for the gastric pathogen *Helicobacter pylori* for gene expression and carcinogenesis In addition it covers the complex forming properties of nickel with amino acids peptides phosphates nucleotides and nucleic

acids The volume also provides sophisticated insights in the recent progress made in understanding the role of nickel in enzymes such as ureases hydrogenases superoxide dismutases acireductone dioxygenases acetyl coenzyme A synthases carbon monoxide dehydrogenases methyl coenzyme M reductases and it reveals the chaperones of nickel metabolism

**Metal Ions In Biological Systems, Volume 44** Helmut Sigel,Roland Sigel,2005 Volume 44 devoted solely to the vital research areas concerning the biogeochemistry of metals and their transport in the environment and availability to living systems offers 9 timely and authoritative chapters on these fascinating topics by 19 internationally recognized experts

Selected Topics in Inorganic Chemistry - Part II Dr. A. AHMED RAZA & Dr. SEENU RAVI,2024-09-05 This book is for the postgraduate students of chemistry aspiring to crack competitive examinations such as CSIR NET GATE SLET SET and PhD entrance examinations Presently admission to PhD programs in premier institutions like IITs NITs CSIR laboratories central universities and state universities is based on either NET GATE certificate or PhD entrance examinations Further the minimum eligibility criteria laid by UGC for the direct recruitment of Assistant Professors in the higher educational institutions is a postgraduate degree with NET SLET SET certificate Thus the students are bound to pass these examinations to pursue a bright career either in research or in academic teaching The cut off for qualifying these exams is 40 to 50% However the qualifying percentage of the candidates appearing for these examinations is around 5% only Therefore an attempt has been made by authors to develop study material pertaining to the syllabus of these exams along with the solved problems from the previous year question papers which will guide the students to qualify easily *Metallothioneins and Related Chelators* Astrid Sigel,Helmut Sigel,Roland K. O. Sigel,2009 Chapters 3 to 5 give an account of bacterial MTs MTs in yeast and fungi and MTs in plants Most astonishingly the MTs of bacteria and plants contain next to cysteine also histidine residues and thus metal ions are not only sulfur but also imidazole coordinated which gives rise to zinc finger like structures Remarkably yeast and fungal MTs are Cu I rather than Zn II or Cd II binding proteins Next Chapters 6 through 9 discuss the MTs of dipteran insects including the model organism *Drosophila melanogaster* earthworms and nematodes as well as echinoderms crustaceans molluscs and fish Actually aquatic animals both vertebrates and invertebrates have the potential to be used for monitoring metal contamination in aquatic ecosystems Interestingly in Chapter 9 the remarkable speculation is presented that under chronic natural exposure conditions the animals establish a trade off between the cost of detoxifying non essential metals and the cost of allowing some of these metals to spill over onto metal sensitive sites This contrasts with laboratory experiments involving aquatic animals where the toxicity of non essential metals normally exhibits a threshold response at low exposure concentrations the organisms can detoxify the incoming metal and thus tolerate the exposure whereas at concentrations above the threshold the detoxification mechanism is no longer able to protect the organism completely *Metal Ions in Bio-Imaging Techniques* Astrid Sigel,Eva Freisinger,Roland K.O. Sigel,2021-03-08 Volume 22 entitled *Metal Ions in Bio Imaging Techniques* of the series *Metal Ions in Life Sciences* deals with metal ions as tools in

imaging This dates back to the first half of the past century when barium sulfate was orally given to patients undergoing X ray examination The use of contrast agents has since developed into a large interdisciplinary field encompassing not only medicine but also chemistry material sciences physics biology engineering and computer sciences MILS 22 provides deep and current insights in 17 stimulating chapters on the new research frontiers of this fast growing field on bio imaging and beyond For example adding bio sensing yields theranostic agents meaning diagnosis and therapy linked in the same molecule ions of Gd Mn Fe Co Ir  $^{99m}\text{Tc}$  etc are involved Other important topics are e g metal complexes in paramagnetic Chemical Exchange Transfer paraCEST radiometals for Positron Emission Tomography PET imaging or paramagnetic metal ion probes for  $^{19}\text{F}$  magnetic resonance imaging MILS 22 is written by 57 internationally recognized experts from 12 countries that is from the US via Europe to China The impact of this vibrant research area is manifested by more than 2300 references and nearly 120 figures mostly in color and several informative tables To conclude Metal Ions in Bio Imaging Techniques is an essential resource for scientists working in the wide range from material sciences enzymology analytic organic and inorganic biochemistry all the way through to medicine including the clinic not forgetting that also excellent information for teaching is provided
