## **Role Of Gis In Lifting The Cloud Off Chernobyl:**

Role of GIS in Lifting the Cloud Off Chernobyl Jaromir Kolejka, 2002-08-31 Proceedings of the NATO Advanced Research Workshop on Role of Geoinformation Technology in Mitigation of Chernobyl Nuclear Accident held in Yalta Ukraine 17 21 September 2001      **Role of GIS in Lifting the Cloud Off Chernobyl** Jaromir Kolejka, 2013-03-11 The 15th anniversary of the Chernobyl nuclear power plant disaster offered a timely opportunity for an expert assessment of the current situation and suggestions for approaches to managing the information associated with the site and surrounding contaminated territories. The great quantity of data coming from the contaminated region was and is very difficult to use without the aid of modern information technologies especially Geographic Information Systems GIS and Remote Sensing RS. Application of these technologies and related expertise became crucial to the region's economic recovery and sustainability planning. Given the real possibility of a similar accident at nuclear facilities elsewhere around the world, the development of recovery strategies based on experience gained at Chernobyl using modern scientific methods and technologies will be invaluable in the future. The presentations and discussion reported in the book have led to some key conclusions. Image maps derived from satellite imagery are the most economical up to date and readily available basis for Chernobyl related applications as well as for other future applications. The study of soil plant transfer of radionuclides afforded comparatively much more reliable data. GIS in association with adequate knowledge is a valuable tool in decision making and modelling of contaminated areas and objects.

**Remediation of Contaminated Environments**, 2009-05-12 Remediation of Contaminated Environments summarises amongst other things what happened to the people and environment around Chernobyl and other nuclear sites and what measures need to be taken in future in the event of nuclear accidents etc plus it has a very important and currently topical use in detailing what to do in the event of a terrorist dirty bomb attack on a city. Remediation including characterization of contaminated sites, safety requirements, remediation planning, effectiveness of individual measures in different environments, social, ethical and economic considerations, application of modern decision aiding technologies. Applicable to different categories of contaminated environments and contaminants comprising areas contaminated by radiation accidents and incidents, nuclear weapon tests, natural radionuclides associated with nuclear fuel cycle, fossil material mining and gas and oil production. Associated side effects, environmental and social and human based remediation measures, comprising perception of this activity by the population with particular regard to stakeholders and population involvement in making decisions on environmental safety and remediation of contaminated sites.      Sources and Effects of Ionizing Radiation, 2011      Sources and Effects of Ionizing Radiation United Nations, 2011      **Technical Reports Series**, 2010      *Directory of Published Proceedings*, 2003      *American Book Publishing Record*, 2002      Index of Conference Proceedings British Library.
