of the newest approaches to diagnosis and treatment Gain fresh perspectives and up to date insights from the world's leading authorities on the pathophysiology diagnosis and management of stroke Access the comprehensive expert clinical guidance you need to recognize the clinical manifestations of stroke use the latest laboratory and imaging studies to arrive at a diagnosis and generate an effective medical and surgical treatment plan Make efficient and accurate diagnoses with the aid of abundant full color CT images and pathology slides Stay up to date on hot topics such as mechanisms of action of commonly used drugs neuronal angiogenesis and stem cells basic mechanisms of spasm and hemorrhage prevention of stroke genetics predisposing risk factors and much more

### **Utilisation of Excess Heat Towards a Circular Economy**

Sofia Päivärinne, 2017-11-23 In order to significantly lower the environmental impact from human activities numerous efforts and approaches related to the transformation of human activities have developed during the last decades Examples of such efforts are policies and strategies at different levels some with a top down approach focusing on extensive institutional changes and some with a bottom up approach focusing on industrial actors and industry led activities One essential aspect of these efforts concerns the energy used producing the products and services provided within our society This includes for example improved efficiency of processes in order to minimise the amount of energy used or optimisation of efficiency by using energy with the lowest possible exergy value It can also be about re use of energy which is the focus of this thesis Heat which is the main by product of all energy systems can be utilised for heating purposes to lower the primary energy demand for heating Increased utilisation of excess heat however requires collaboration between normally unrelated actors those with a supply of and those demanding excess heat In Sweden which is a Northern European country with high demand for heat the tradition of large energy intensive manufacturing industries generating large amounts of excess heat in combination with well established district heating distribution systems constitute good conditions for excess heat utilisation Despite the fact that Sweden is among the world leaders in utilising excess heat there is however still a large unutilised potential From this background the objective of this thesis is to identify challenges behind excess heat utilisation for heating purposes and to propose practical suggestions to facilitate expanded excess heat utilisation The overall objective is analysed with a focus on drivers and barriers behind interorganisational collaborations on excess heat utilisation important components of interorganisational business models and how the technical conditions regarding supply and demand could be facilitated by strategic municipal spatial planning processes The research is largely based on interviews conducted with societal actors with different perspectives on excess heat utilisation energy companies industries generating high grade excess heat facilities generating low grade excess heat facilities demanding low grade excess heat experts of utilisation of low grade excess heat branch organisations municipal spatial planners energy and climate advisors and developers Document studies have been conducted in order to collect case specific knowledge The research questions are explored based on literature studies on the principles of industrial symbiosis business model perspective and strategic planning Further they are

examined in a Swedish context It is concluded that the three perspectives complement each other by providing a system perspective on increased utilisation of excess heat as they seek to contribute both environmental and financial benefits at both a company and societal level In order to facilitate further utilisation of excess heat it is important to focus on the organisational factors of humility honesty transparency trust fine grained information transfer joint problem solving and shared visions of common goals which are important conditions behind development of functional and long term durable collaborations Business models for collaboration could contribute to the creation of these organisationally important conditions Such business models could also provide knowledge on how to create and capture joint values For some collaborations involving actors lacking the technical knowledge related to the capturing and distribution of excess heat a third party providing services related to the technical knowledge required could be beneficial Collaborations in which one of the actors consists of an energy company often entail the technical knowledge required This implies that different collaborations involving different types of actors and under different prevailing financial technical and organisational conditions require customised and flexible business solutions Local authorities could through their overall function initiate interorganisational collaborations on excess heat within the framework of municipal spatial planning The results do however show that the investigated planning processes could develop more extensive stakeholder participation to include further societal actors related to excess heat More extensive stakeholder participation have the potential to initiate new development of collaborations on excess heat between normally unrelated actors both with and without involvements of third party knowledge brokers A broader participation is also expected to result in increased knowledge on how to plan to further facilitate the condition of excess heat utilisation

**Essential Guide to Calving** Heather Smith Thomas, 2008-01-01 Every cattle farmer from the keeper of a family milk cow to the rancher overseeing a large herd will gain confidence and control by becoming more knowledgeable about calving Healthy pregnancies safe births and thriving calves are critical to every cattle operation and in remote farm locations the veterinarian is not always readily available Even if the vet is nearby the farm's finances will be healthier if the farmer can oversee most of the calving process Heather Smith Thomas an expert on livestock with decades of firsthand experience covers every routine situation likely to arise before during and after calving And when the calving process is out of the ordinary Thomas guides the farmer through pregnancy problems difficult deliveries recognizing when to call in a vet and postpartum complications Her thorough coverage of what to expect in every situation gives farmers the knowledge they need to care personally for their cows The second half of the book is dedicated to ensuring that every calf gets off to a healthy start Thomas helps farmers work with cows reluctant to nurse substitute mothers and frail calves A complete chapter on calfhood illnesses explains warning signs and offers tips on prevention and treatment As people return to farming in growing numbers the demand for safe humane livestock knowledge continues to increase Farmers will turn to this reliable volume again and again as they welcome each new calf

**Thermal Energy** Yatish T.

Shah,2018-01-12 The book details sources of thermal energy methods of capture and applications It describes the basics of thermal energy including measuring thermal energy laws of thermodynamics that govern its use and transformation modes of thermal energy conventional processes devices and materials and the methods by which it is transferred It covers 8 sources of thermal energy combustion fusion solar fission nuclear geothermal microwave plasma waste heat and thermal energy storage In each case the methods of production and capture and its uses are described in detail It also discusses novel processes and devices used to improve transfer and transformation processes

**Bibliography of Agriculture with Subject Index** ,1993-05 Understanding the Molecular Mechanisms of Plant Responses to Abiotic Stress Sang Yeol Lee,Dae-Jin Yun,Jose M. Pardo,Motoaki Seki,Yan Guo,Abel Rosado,2020-02-20 Plant responses to environmental stress are governed by complex molecular and biochemical signal transduction processes which act in coordination to determine tolerance or sensitivity at the whole plant level Upon exposure to abiotic stress plants express a sophisticated coordinated response to reprogram interconnected defense networks and metabolic pathways by alterations in the transcription translation and post translational modification of defense related genes and proteins Traditionally physiological and phenotypic responses were the major ones to be collected in plant stress biology However modern studies include the identification of key genes that influence stress tolerance and plant growth under the imposing stress and the verification of gene functions using knock out mutants or overexpression lines In addition genomics has become a necessary tool for the understanding of plant stress responses at the whole genome levels The identification of stress tolerant plant resources and the investigation of the functional role of the genetic variants is also a valuable tool in this research field Recently the advent of CRISPR Cas genome editing technology enables these variations to be introduced in crops for improved stress tolerance traits Through the understanding of the molecular mechanisms involved in plant signaling in response to abiotic stress and crop performance characters under stress conditions we hope to open new ways for the breeding of superior crops
