Brown, 2020-01-09 Conceived as the meanings that individuals attach to their selves a substantial stockpile of theory related to identities accumulated across the arts social sciences and humanities over many decades continues to nourish contemporary research on self identities in organizations In times which are more reflexive narcissistic and fluid the identities of participants in organizations are increasingly less fixed and less certain making identity issues both more salient and more interesting Particular attention has been given to processes of identity construction often styled identity work Research has focused on how why and when such processes occur and their implications for organizing and individual group and organizational outcomes This has resulted in a burgeoning stream of research from discursive dramaturgical symbolic socio cognitive and psychodynamic perspectives that most often casts individuals efforts to fabricate identities as intentional relational and consequential Seemingly intractable debates centred on the nature of identities their relative stability or fluidity whether they are best regarded as coherent or fractured positive or not and how they are fabricated within relations of power combined with other conceptual issues continue to invigorate the field However these debates have also led to some scepticism regarding the future potential of identities research Yet as the chapters in this Handbook demonstrate there are considerable grounds for optimism that identity as root metaphor nexus concept and means to bridge levels of analysis has significant potential to generate multiple compelling streams of theorizing in organization and management studies *Rethinking the Knowledge Controversy in Organization Studies* Walter R. Leadership Processes and Follower Self-identity Robert G. Lord, Douglas J. Brown, 2003-09-12 Presenting a follower centered perspective on leadership this book focuses on followers as the direct determinant of leadership effects because it is generally through follower reactions and behaviors that leadership attempts succeed or fail Therefore leadership theory needs to be articulated with a theory of how followers create meaning from leadership acts and how this meaning helps followers self regulate in specific contexts In this book an attempt

is made to develop such a theory maintaining that the central construct in this process is the self identity of followers In developing this theoretical perspective the authors draw heavily from several areas of research and theory The most critical constructs do not come directly from the leadership literature but from social and cognitive theory pertaining to follower s self identity self regulatory processes motivation values cognitions and emotions and perceptions of social justice Leaders may have profound effects on these aspects of followers and it is by analyzing such indirect follower mediated leadership effects that most ideas regarding leadership theory and practice are developed Due to its broad theoretical focus this book is relevant to a number of audiences The authors principal concern is with the development of leadership theory and the practice of leadership making the book relevant to audiences in management applied psychology and social psychology They have tried to clearly define key constructs and provide practical examples so that the book could be accessible to advanced undergraduate students However the diversity of the underlying theoretical literatures and the complexity of the framework developed also make the book appropriate for graduate courses in those disciplines and for readers with a professional interest in leadership theory or practice *Multiteam Systems* Stephen J.
