

Other medical treatment as indicated including antiarrhythmic therapy, device placement if appropriate, standard heart failure management

Active cardiac sarcoidosis

- Ventricular tachyarrhythmias, high-grade heart block or new bifascicular block, left or right ventricular dysfunction, and
- Active FDG uptake on cardiac FDG-PET

Treat in cases of active inflammation with symptoms based on the following stratification (see Figure 2)

- Definite: Should treat
- Highly probable: Should treat
- Probable: Individualized decision-making

Initiate corticosteroids

- Prednisone 30–40 mg/day with taper specific to patient presentation and comorbidities
- Consider concomitant initial therapy with one of the following steroid-sparing agents: methotrexate, mycophenolate, azathioprine, or leflunomide

Reassessment at 3–6 months

- Cardiac FDG PET

Decreased or resolved inflammation

- Continue prednisone at 10–20 mg/day or taper prednisone further (if on a steroid sparing agent or if clinical manifestations are improved)

Reassessment at 3–6 months

- Cardiac FDG PET

Resolved inflammation

- Taper immunosuppression to off after 12 months of treatment from time of initiation
- Additional decision-making for monitoring of active CS should be guided by clinical course

Decreased but residual inflammation

- Individualize decision-making for immunosuppression based on clinical picture (eg change in arrhythmia burden or cardiac function)
- Additional decision-making for monitoring of active CS should be guided by clinical course

Unchanged or worsening inflammation

Unchanged or worsening inflammation

- Raise prednisone to the lowest previous effective dose
- Add a previously unused steroid-sparing agent: methotrexate, mycophenolate, azathioprine, or leflunomide

Reassessment at 3–6 months

- Cardiac FDG PET

Minimal residual or resolved inflammation

- Wean prednisone to 10–20 mg/day
- Continue steroid sparing agent

Reassessment at 6 months

- Cardiac FDG PET

Resolved inflammation

- Wean prednisone to off
- Continue steroid sparing agent
- Additional decision-making for weaning immunosuppression should be guided by clinical course

Unchanged or worsening inflammation

In cases of no response, evaluate for an alternative diagnosis and/or false positive PET scan especially if diagnosis of CS was not histologically confirmed

If significant drug side effects or contraindications to a steroid sparing agent, start a biologic

Unchanged or worsening inflammation

- Raise prednisone to the lowest previous effective dose
- Add a biologic agent (infliximab or adalimumab)
- Additional decision-making for weaning immunosuppression should be guided by clinical course

Sarcoidosis Clinical Management

Sarcoidosis Clinical Management:

Sarcoidosis--clinical Management Om P. Sharma, 1984 *Clinical Management of Salivary Gland Disorders* Louis Mandel, 2024-06-22 This book will serve as a complete reference guide for the totality of salivary gland SG disease. Focusing on the clues available to the practitioner during the patient examination, it will completely review and update the available data concerning all manner of SG conditions. Looking beyond the perspectives of surgery, imaging, pathology, or sialendoscopy in diagnosis and therapy, this book will provide all professionals interested in the head and neck extensive and detailed diagnostic information about each SG entity. Achieving an accurate diagnosis involves the use of multiple clinical tools: history, physical examination, imaging, serology, biopsy, etc. The indication for and significance of each of these investigative procedures will be discussed, integrated, and photographically illustrated in tandem with the diagnostic review of the relevant SG entity. Besides a diagnostic review of readily diagnosed SG entities (Sjogren's sialolithiasis, infection, etc.), the book will cover subjects whose diagnoses have been inadequately described: juvenile recurrent parotitis, sarcoid, radioactive iodine for thyroid cancer, pediatric Sjogren's, etc., or never reviewed: middle ear surgery and saliva, Stensen's duct dilatation, first bite syndrome, HIV, paraparotid fat, etc. It will be organized by diagnosis. Written by an expert in the field with over six decades of clinical experience, *Clinical Management of Salivary Gland Disorders* will call attention to the large number of presenting patients who can be categorized as false positives. This includes a psychosomatic group with perceptual salivary complaints, patients with masseteric hypertrophy, paraglandular opacities misdiagnosed as sialoliths, dental caries thought to have a salivary origin, and more. Finally, this book will offer thorough methodology for identifying and diagnosing these initially confusing problems. An exhaustive resource for the field of salivary gland complaints, this book will be useful to otolaryngologists, head/neck surgeons, plastic surgeons, oral medicine, oral pathology practitioners and residents, oral and maxillofacial surgeons, and dentists. Internists concerned with physical diagnosis of head/neck problems, neuroradiologists concerned with relating imaging results to a clinical salivary gland condition, and nurse practitioners and dental hygienists will also find this book most helpful.
