Computational Statistics Yadolah Dodge,Joe Whittaker,2012-12-06 The papers assembled in this book were presented at the biannual symposium of International Association for Statistical Computing in Neuchâtel Switzerland in August of 1992 This congress marked the tenth such meeting from its inception in 1974 at Vienna and maintained the tradition of providing a forum for the open discussion of progress made in computer oriented statistics and the dissemination of new ideas throughout the statistical community It was gratifying to see how well the groups of theoretical statisticians software developers and applied research workers were represented whose mixing is an event made uniquely possible by this symposium While maintaining traditions certain new features have been introduced at this conference there were a larger number of invited speakers there was more commercial sponsorship and exhibition space and a larger body of proceedings have been published The structure of the proceedings follows a standard format the papers have been grouped together according to a rough subject matter classification and within topic follow an approximate alphabetical order The papers are published in two volumes according to the emphasis of the topics volume I gives a slight leaning towards statistics and modelling while volume II is focussed more on computation but this is certainly only a crude distinction and the volumes have to be thought of as the result of a single enterprise
