Rossiter, 2010-11-25 This book proposes a revolutionary new theory of construct measurement called C OAR SE for the social sciences The acronym is derived from the following key elements construct definition object representation attribute classification rater entity identification selection of item type enumeration and scoring The new theory is applicable to the design of measures of constructs in Management Marketing Information Systems Organizational Behavior Psychology Sociology C OAR SE is a rationally rather than empirically based theory and procedure It can be used for designing measures of the most complex and also the most basic constructs that we use in social science research C OAR SE is a radical alternative to the traditional empirically based psychometric approach and a considerable amount of the book
