Cognition Mats Andrén, Marlene Johansson Falck, Jordan Zlatev, 2008-12-18 Using a plethora of concepts theories and
methods the theoretical and empirical studies described in this volume are united in their approach of treating language not
in isolation e g as a module but as both based on structures and processes of cognition and at the same time as affecting the
human mind The book is organized in 7 parts corresponding to some of the major fields in language research today a
linguistic meta theory and general issues b lexical meaning c metaphor d grammar e pragmatics f gesture and bodily
communication and g historical linguistics At the same time the non modular approach to language adopted by the authors is
reflected by the fact that there are no strict boundaries between the parts Thus the book is a valuable contribution to the
growing interdisciplinary field of Language and Cognition **The Theory of Linguistic Channels in Alphabetical Texts**
Emilio Matricciani, 2023-12-15 This book is a collection of papers on a mathematical statistical theory concerning the deep
language structure of alphabetical texts The theory does not follow the actual paradigm of linguistic studies which consider
neither Shannon s communication theory nor the fundamental connection that some linguistic parameters have with the
reading skill and short term memory capacity of readers The book proposes to young researchers and students in the fields of
cognitive psychology theory of communication information theory phonics and linguistics history of modern and ancient
literatures and stylometry a possible theoretical framework which could allow one to further research the fundamental
mathematical structure of human language This research might enable academics to devise a mathematical theory that
includes meaning the great absent element since Shannon s times in our mathematical theories of human communication
