Making Minds Less Well Educated Than Our Own, 2012 Imaginative Science Education Yannis

Hadzigeorgiou, 2016-05-26 This book is about imaginative approaches to teaching and learning school science. Its central premise is that science learning should reflect the nature of science and therefore be approached as an imaginative creative activity. As such, the book can be seen as an original contribution of ideas relating to imagination and creativity in science education. The approaches discussed in the book are storytelling, the experience of wonder, the development of romantic understanding, and creative science including science through visual art, poetry, and dramatization. However, given the perennial problem of how to engage students of all ages in science, the notion of aesthetic experience and hence the possibility for students to have more holistic and fulfilling learning experiences through the aforementioned imaginative approaches is also discussed. Each chapter provides an in-depth discussion of the theoretical background of a specific imaginative approach. e.g. storytelling, wonder, full science reviews the existing empirical evidence regarding its role in the learning process and points out its implications for pedagogy and instructional practices. Examples from physical science illustrating its implementation in the classroom are also discussed. In distinguishing between participation in a science activity and engagement with science ideas per se, the book emphasizes the central role of imaginative engagement with science content knowledge and thus the potential of the recommended imaginative approaches to attract students to the world of science.

The Role of Criticism in Understanding Problem Solving Samuel Fee, Brian Belland, 2012-05-26 In 1991 Denis Hlynka and John Belland released *Paradigms Regained*, a well-received reader for graduate students in the field of educational technology. *The Role of Criticism in Understanding Problem Solving* updates some of those ideas initially proposed in *Paradigms Regained* and extends the conversation into the contemporary discourse regarding problem-based learning (PBL). *Paradigms* proposed the idea of criticism as a third method for the conduction of educational research, the first two being qualitative and quantitative. The concept of criticism as a tool for research is not well established in educational technology, although it is well established in other educational research traditions such as Curriculum Studies. Unfortunately, it is not always clear how criticism can be applied. This book views criticism as a way to step back and look at an educational intervention within educational technology through a particular critical lens. Criticism is viewed as a valuable approach to guiding meta-analyses and theoretical studies serving to prevent the proverbial spinning of the wheels that often happens in educational research. By indicating new potential research questions and directions, criticism approaches can invigorate educational research. This book revisits the ideals of criticism in order to establish their usefulness for studying educational technology interventions to support problem-based learning. First, a few foundational chapters set the stage for the conversations on criticism. Then, the role criticism can play in enhancing analysis and interpretation of the PBL literature is explored. Finally, case studies addressing the central concepts of the text are presented and dissected. This book represents a

complete overhaul and rethinking of the use of criticism as a method for understanding and furthering the research area of PBL within the field of Educational technology

Wonder-Full Education Kieran Egan, Annabella I. Cant, Gillian Judson, 2013-07-24 For many children much of the time their experience in classrooms can be rather dull and yet the world the school is supposed to initiate children into is full of wonder This book offers a rich understanding of the nature

and roles of wonder in general and provides multiple suggestions for to how to revive wonder in adults teachers and curriculum makers and how to keep it alive in children Its aim is to show that adequate education needs to take seriously the task of evoking wonder about the content of the curriculum and to show how this can routinely be done in everyday classrooms The authors do not wax flowery they present strong arguments based on either research or precisely described experience and demonstrate how this argument can be seen to work itself out in daily practice The emphasis is not on ways of evoking wonder that might require virtuoso teaching but rather on how wonder can be evoked about the everyday features of the math or science or social studies curriculum in regular classrooms
