SUMMARY

1. Water quality guidelines are important for the management of water resources. Initially, guidelines focused on quality for domestic drinking water and for agricultural, recreational and industrial purposes. More recently, the emphasis has been on ecosystem protection, as well.

2. This paper discusses the key elements of new risk-based water quality guidelines being developed in Australia and New Zealand, that should lead to more effective management and protection of aquatic ecosystems.

3. There are three essential elements to this new approach: (i) it is *ecosystem-based* — ideally the guidelines should be, as far as possible, ecosystem-specific; (ii) it is *issue-based* — the guidelines should focus on the actual issues or problems caused by physical, chemical and biological stressors rather than on the individual indicators, as at present; and (iii) it is *risk-based*. There is generally great difficulty in deciding whether adverse biological effects will result from various stressors added to an ecosystem. The new approach develops guideline ‘packages’ for each issue and, where possible, for each ecosystem type. Each ‘package’ consists of specified key performance indicators, trigger levels for these indicators (that is, levels which indicate the degree of risk that adverse biological effects may occur), and for high risk situations (where trigger levels are exceeded) a protocol for considering the effect of ecosystem-specific factors in reducing (or enhancing) the biological effects.

4. This paper presents a case study related to a highly relevant aquatic ecosystem issue in Australia, namely the excessive growth of cyanobacteria (blue-green algal blooms), to illustrate how the new risk-based guidelines might be applied.

Keywords: water quality, guidelines, ecosystem protection, risk assessment

Introduction

Water quality guidelines have been used over the years as an important component of the management of water resources. Initially, the guidelines focused on quality for domestic drinking water, and on agricultural, recreational and industrial waters. More recently, however, the emphasis has been more

towards ecosystem protection (Hart *et al.*, 1993). This paper reports a new risk-based approach in the development of water quality guidelines for the protection of aquatic ecosystems.

Until very recently, the available water quality guidelines for ecosystem protection emphasized the effects of toxicants, with considerably less attention on other factors (e.g. nutrients, organic matter, temperature, environmental flows, sediments) that can have equally important effects on ecosystem health. In many countries, including Australia and New Zealand, problems due to toxicants, particularly heavy metals, are of local significance. Often, there is much greater general concern about

New Evaluation Procedures For A New Generation Of Water Related Projects:

New Evaluation Procedures for a New Generation of Water-related Projects Ronald G. Cummings, Ariel Dinar, Douglas Olson, 1996-01-01 This groundbreaking study presents the results of a large survey of more than 400 industrial firms in Russia conducted by the World Bank in mid 1994 The survey examined the role and organization of the enterprise sector which is a key issue in transition economies particularly in Russia where a concerted attempt has been made to change ownership arrangements and hence corporate governance More than half the firms surveyed are in the private sector the rest remain in state hands or are partially privatized A major focus of the book is to understand whether the Russian privatization has led to improvements in corporate governance The authors identify some initial positive changes but also find that the manner in which privatization has occurred has not yet had a strong effect on the internal operations of Russian industrial firms However they do find evidence from their sample of significant growth in new firms The volume examines the positive and negative aspects of restructuring employment and workers compensation issues budget constraints the effects of privatization on employee behavior and future prospects for Russian firms *Groundwater in Urban Development* Stephen S. D. Foster, Adrian Lawrence, Brian Morris, 1998 This paper highlights key urban groundwater issues and management needs It also raises awareness and understanding of hydrogeological processes in urban areas and provides a framework for the proper and systematic consideration of groundwater dimensions in urban management This paper suggests options for greater sustainable development and management of groundwater in urban areas **Concessions for Infrastructure** Michel Kerf, 1998-01-01 This paper examines the increased role of the private sector in developing and maintaining critical infrastructure It identifies governments quest to shift part of the burden of new infrastructure investments to the private sector for the economic development of firms and industry and the improvement of quality of life and given the constraints on public budgets to finance growing infrastructure needs Adequate infrastructure services include power telecommunications transport water supply and sanitation The paper also emphasizes the private sector involvement in bringing increased efficiency to investment and management and operation **Soil Fertility Management in Sub-Saharan Africa** W.
