NEW DIRECTIONS

The Workshop on New Directions in Applied Mathematics is a satellite meeting of ICTS Inaugural Event. It will focus on highlighting some novel themes in applied mathematics that have dominated the applied mathematics landscape in recent years and are only beginning to take roots in India. These have been spurred by recent developments in natural sciences such as statistical mechanics and chemical dynamics, unique computational problems introduced by very large data sets, and problems arising from engineering disciplines of communications and computer science that are defining the tenor of the future through revolutions such as the Internet. These have not only thrown open new issues, but whole new paradigms, spawning entirely new subject areas: complex systems, random graphs, analysis in very large dimensional spaces, to mention a few.

The Workshop will bring together some of the leading researchers in these frontiers to give a bird's eye view of their respective specialties and a roadmap for the future. It is hoped that this will spur some young Indian applied mathematicians to venture into such uncharted territories that have a lot of intellectual adventures to offer.

Faculty and students interested in participating in this workshop should apply online by clicking on the "Register" link at the following address: <http://www.icts.res.in/program/ndam>. Selected participants will be reimbursed their travel expense (as per Government of India norms) and provided local hospitality. Local participants are also required to formally apply.

New Directions In Applied Mathematics:

New Directions in applied mathematics ,1982 New Directions in Applied Mathematics P.J. Hilton,G.S. Young,2012-12-06 It is close enough to the end of the century to make a guess as to what the Encyclopedia Britannica article on the history of mathematics will report in 2582 We have said that the dominating theme of the Nineteenth Century was the development and application of the theory of functions of one variable At the beginning of the Twentieth Century mathematicians turned optimistically to the study of functions of several variables But wholly unexpected difficulties were met new phenomena were discovered and new fields of mathematics sprung up to study and master them As a result except where development of methods from earlier centuries continued there was a recoil from applications Most of the best mathematicians of the first two thirds of the century devoted their efforts entirely to pure mathematics In the last third however the powerful methods devised by then for higher dimensional problems were turned onto applications and the tools of applied mathematics were drastically changed By the end of the century the temporary overemphasis on pure mathematics was completely gone and the traditional interconnections between pure mathematics and applications restored This century also saw the first primitive beginnings of the electronic calculator whose development in the next century led to our modern methods of handling mathematics **Current and Future Directions in Applied Mathematics** Mark Alber,Bei Hu,Joachim Rosenthal,2012-12-06 Mark Alber Bei Hu and Joachim Rosenthal vii Part I Some Remarks on Applied Mathematics Roger Brockett 1 Mathematics is a Profession Christopher 1 Byrnes 4 Comments on Applied Mathematics Avner Friedman 9 Towards an Applied Mathematics for Computer Science Jeremy Gunawardena 11 Informal for Applied Mathematics Darryl Holm 15 On Research in Mathematical Economics M Ali Khan 21 Applied Mathematics in the Computer and Communications Industry Brian Marcus 25 Friends in Applied Mathematics Jerrold E Marsden 28 Applied Mathematics as an Interdisciplinary Subject Clyde F Martin 31 vi Contents Panel Discussion on Future Directions in Applied Mathematics Laurence R Taylor 38 Part II Feedback Stabilization of Relative Equilibria for Mechanical Systems with Symmetry A M Bloch J E Marsden and G Sanchez 43 Oscillatory Descent for Function Minimization R Brockett 65 On the Well Posedness of the Rational Covariance Extension Problem C I Byrnes H J Landau and A Lindquist 83 Singular Limits in Fluid Mechanics P Constantin 109 Singularities and Defects in Patterns Far from Threshold N M Ercolani 137 Mathematical Modeling and Simulation for Applications of Fluid Flow in Porous Media R E Ewing 161 On Loeb Measure Spaces and their Significance for Non Cooperative Game Theory M A Khan and Y Sun 183 Mechanical Systems with Symmetry Variational Principles and Integration Algorithms J E Marsden and J M Wendlandt 219 Preface The applied sciences are faced with increasingly complex problems which call for sophisticated mathematical models New Directions in Applied Mathematics , New Directions in Applied Mathematics Kenneth Baclawski,1982 *The Merging of Disciplines: New Directions in Pure, Applied, and Computational Mathematics* Richard E. New Directions in Two-Year College Mathematics Donald J. Albers, Stephen B. Rodi, Ann E. Watkins, 2012-12-06 by Donald J Albers ix INTRODUCTION In July of 1984 the first national conference on mathematics education in two year colleges was held at Menlo College The conference was funded by the Alfred P Sloan Foundation Two year colleges account for more than one third of all undergraduate enrollments in mathematics and more than one half of all college freshmen are enrolled in two year colleges These two facts alone suggest the importance of mathematics education in two year colleges particularly to secondary schools four year colleges and universities For a variety of reasons four year colleges and universities are relatively unaware of two year colleges Arthur Cohen who was a participant at the New Directions conference warns Four year colleges and universities ignore two year colleges at their own peril Ross Taylor another conference participant encouraged two year college faculty to be ever mindful of their main source of students secondary schools and to work hard to strengthen their ties with them There are many other reasons why it was important to examine two year college mathematics from a national perspective 1 Over the last quarter century no other sector of higher education has grown so rapidly as have two year colleges Their enrollments tripled in the 60 s doubled in the 70 s and continue to increase rapidly in the 80 s x 2 Twenty five years ago two year colleges accounted for only one seventh of all undergraduate mathematics enrollments today the fraction is more than one third
