Sensors Fault Diagnosis Trends and Applications Piotr Witczak, 2021-09-01 Fault diagnosis has always been a concern for industry In general diagnosis in complex systems requires the acquisition of information from sensors and the processing and extracting of required features for the classification or identification of faults Therefore fault diagnosis of sensors is clearly important as faulty information from a sensor may lead to misleading conclusions about the whole system As engineering systems grow in size and complexity it becomes more and more important to diagnose faulty behavior before it can lead to total failure In the light of above issues this book is dedicated to trends and applications in modern sensor fault diagnosis

Distributed Network Systems Weijia Jia,Wanlei Zhou,2004-12-15 Both authors have taught the course of Distributed Systems for many years in the respective schools During the teaching we feel strongly that Distributed systems have evolved from traditional LAN based distributed systems towards Internet based systems Although there exist many excellent textbooks on this topic because of the fast development of distributed systems and network programming protocols we have difficulty in finding an appropriate textbook for the course of distributed systems with orientation to the requirement of the undergraduate level study for today s distributed technology Specifically from to date concepts algorithms and models to implementations for both distributed system designs and application programming Thus the philosophy behind this book is to integrate the concepts algorithm designs and implementations of distributed systems based on network programming After using several materials of other textbooks and research books we found that many texts treat the distributed systems with separation of concepts algorithm design and network programming and it is very difficult for students to map the concepts of distributed systems to the algorithm design prototyping and implementations This book intends to enable readers especially postgraduates and senior undergraduate level to study up to date concepts algorithms

and network programming skills for building modern distributed systems It enables students not only to master the concepts of distributed network system but also to readily use the material introduced into implementation practices **Water Contamination Emergencies** Ulrich Borchers, John Gray, K Clive Thompson, 2013-07-01 How do we assess and manage the actual risks from water contamination Can we learn from previous experiences What can be done in future This book is the proceedings of the fifth conference on this topic and addresses these issues relating to drinking water and drinking water systems With emphasis on effectively and efficiently managing the risks and threats and sharing experiences it provides information on successful use of leading edge technologies and best practice both now and for the future With contributions from leading scientists and experts in academia and industry it offers a truly international perspective on our ability to deal with water contamination emergencies Emphasis is given to prevention strategy and unusual emergency incident situations relating to drinking water The book will appeal across a diverse group from public health professionals water companies and water security experts and regulators
