Rifts World Two Atlantis:

Anomalous Magnetic Field of the World Ocean Alexander M. Gorodnitsky, 1994-10-12 This book investigates the anomalous magnetic field of the ocean and its connection with geological structure tectonic evolution of the oceanic lithosphere and magnetic properties of different rock types in the oceanic crust The book describes new instruments and techniques of gradient magnetic measurements with three sensors as well as the new technique of processing and interpreting hydromagnetic data on the basis of adoptive filtration and reparametrization The text provides unique data of geomagnetic surveys carried out by Russian research vessels in different regions of the World Ocean including submersible apparatus and ingenious theoretical and experimental technology of the magnetic modeling and investigations of the nature of magnetic anomalies The results of systems analysis of geochemical content and composition during the mid oceanic ridge basalt are presented *Rift Zones of the World Ocean* Aleksandr Pavlovich Vinogradov, Gleb Borisovich Udintov, 1975

Sedimentation and Tectonics in Rift Basins Red Sea:- Gulf of Aden B.H. Purser, D.W. Bosence, 2012-12-06 Sedimentation and Tectonics in Rift Basins Red Sea Gulf of Aden presents new case studies and synthesises the results of recent research on the sedimentological evolution of the Red Sea Gulf of Aden rift system This rift basin is generally regarded as the best natural geological laboratory in the world in which to study the processes of rift formation Uplift of the rift margins in an arid climate results in extensive three dimensional exposures of pre and syn rift strata and associated structures These serve as analogues for the understanding and hydrocarbon exploration of deeper buried rift systems on continental margins such as the North Sea and the Atlantic margins The Red Sea Gulf of Aden rift is also exceptional in that its stratigraphy spans all stages from pre rift environments syn rift continental to marine environments through the rift to drift transition to post rift sea floor spreading The work is arranged in eight sections following a review of the sedimentology and stratigraphy of rift basins the magmatism and structural evolution of the Red Sea Gulf of Aden rift is reviewed Subsequently new case studies are presented of the early rifting environment syn rift sedimentation tectonics and diagenesis evaporites and salt tectonics Post rift sediments of the axial trough are then discussed along with studies of reefs coastal zone and shelf sediments and the tectonic geomorphology of the rift margin escarpment This work results from extensive new research in the rift basin largely carried out under collaborative research projects by European and Middle Eastern geologists It will be an invaluable reference work for geoscientists in the hydrocarbon groundwater and mineral extraction industries as well as for researchers in university departments of earth sciences mining and physical geography *American Bookseller*, 1991 *Metalliferous Sediments of the World Ocean* Evgeny G. Gurvich, 2006-01-16 Dramatic advances in understanding global tectonics have been made in the last half century and the information and specific data acquired on the floor of the World Ocean by the scientific community probably has exceeded that available in all previous time With the benefit of new technology and advanced concepts in the earth sciences extensive exploration of the deep seabed became possible and has been carried out

in many parts of the world Many features have been recognized and data recorded that are vital for understanding the fundamental processes that shape the earth s surface and control the habitable environment The data collected to date on the ocean floor and its physical environment greatly exceeds our understanding and appreciation of their fundamental importance in the earth sciences and our ability to apply this knowledge effectively in improving our way of life With his extensive scientific knowledge and unique experience from many cruises in association with scientists throughout the world Dr Evgeny Gurvich has made an outstanding contribution in acquiring basic data on hydrothermal and sedimentation processes in the ocean as well as in the synthesis of data and concepts available from cruise reports and an extensive literature
