Ring Theory And Algebraic Geometry A. Granja,J.A. Hermida Alonso,A Verschoren,2001-05-08 Focuses on the interaction between algebra and algebraic geometry including high level research papers and surveys contributed by over 40 top specialists representing more than 15 countries worldwide Describes abelian groups and lattices algebras and binomial ideals cones and fans affine and projective algebraic varieties simplicial and cellular complexes polytopes and arithmetics

Rings and Geometry R. Kaya,P. Plaumann,K. Strambach,1985-09-30 When looking for applications of ring theory in geometry one first thinks of algebraic geometry which sometimes may even be interpreted as the concrete side of commutative algebra However this highly developed branch of mathematics has been dealt with in a variety of monographs so that in spite of its technical complexity it can be regarded as relatively well accessible While in the last 120 years algebraic geometry has again and again attracted concentrated interest which right now has reached a peak once more the numerous other applications of ring theory in geometry have not been assembled in a textbook and are scattered in many papers throughout the literature which makes it hard for them to emerge from the shadow of the brilliant theory of algebraic geometry It is the aim of these proceedings to give a unifying presentation of those geometrical applications of ring theory outside of algebraic geometry and to show that they offer a considerable wealth of beautiful ideas too Furthermore it becomes apparent that there are natural connections to many branches of modern mathematics e.g. to the theory of algebraic groups and of Jordan algebras and to combinatorics To make these remarks more precise we will now give a description of the contents In the first chapter an approach towards a theory of non commutative algebraic geometry is attempted from two different points of view
