Riparian Ecosystem Recovery In Arid Lands Strategies And References:

Riparian Ecosystem Recovery in Arid Lands Mark K. Briggs, 2023-02-07 Riparian ecosystems are declining throughout the southwestern United States where many have disappeared completely yet progress toward checking their decline has been marginal and the results of only a few recovery projects have been evaluated In this guidebook Mark K Briggs has filled this gap in riparian conservation literature Based on his experiences gleaned from evaluating the results of many riparian rehabilitation projects Briggs presents these results in a manner that biologists hydrologists government planners resource managers and other concerned citizens can immediately apply toward developing site specific recovery strategies The book opens with a review of watershed characteristics and an examination of drainage systems then proceeds to determining the causes of riparian decline It introduces five factors that have a significant effect on the results of riparian rehabilitation natural regeneration water availability channel stability direct impacts such as livestock grazing and recreational activities and soil salinity and offers case studies that demonstrate how revegetation has been used both effectively and ineffectively It also discusses strategies other than revegetation that may be effective in improving the ecological condition of a site Many of the strategies presented are also relevant to nonarid climates and to urban areas By emphasizing evaluation of riparian ecosystems so that the causes of degradation can be understood and by offering general approaches that can be tailored to specific situations Riparian Ecosystem Recovery in Arid Lands takes a holistic approach to riparian recovery that will enable users to better judge whether recovery expenditures are likely to produce desired results An unprecedented work it will substantially add to efforts across the Southwest and elsewhere to restore these unique and priceless ecosystems

Ecological Restoration in International Environmental Law Anastasia Telesetsky, An Cliquet, Afshin

Akhtar-Khavari, 2016-12-01 Human activities are depleting ecosystems at an unprecedented rate. In spite of nature conservation efforts worldwide, many ecosystems, including those critical for human well-being, have been damaged or destroyed. States and citizens need a new vision of how humans can reconnect with the natural environment. With its focus on the long-term holistic recovery of ecosystems, ecological restoration has received increasing attention in the past decade from both scientists and policymakers. Research on the implications of ecological restoration for the law and law for ecological restoration has been largely overlooked. This is the first published book to examine comprehensively the relationship between international environmental law and ecological restoration. While international environmental law (IEL) has developed significantly as a discipline over the past four decades, this book enquires whether IEL can now assist states in making a strategic transition from not just protecting and maintaining the natural environment but also actively restoring it. Arguing that states have international duties to restore, this book offers reflections on the philosophical context of ecological restoration and the legal content of a duty to restore from an international law, European Union law, and national law perspective. The book concludes with a discussion of several contemporary themes of interest to both lawyers and ecologists, including the role of private actors, protected areas, and climate change in ecological restoration. *Renewing Our Rivers*

Mark K. Briggs, Waite R. Osterkamp, 2021-01-05 Our rivers are in crisis and the need for river restoration has never been more urgent. Water security and biodiversity indices for all of the world's major rivers have declined due to pollution, diversions, impoundments, fragmented flows, introduced and invasive species, and many other abuses. Developing successful restoration responses are essential. *Renewing Our Rivers* addresses this need head-on with examples of how to design and implement stream corridor restoration projects. Based on the experiences of seasoned professionals, *Renewing Our Rivers* provides stream restoration practitioners the main steps to develop successful and viable stream restoration projects that last. Ecologists, geomorphologists, and hydrologists from dryland regions of Australia, Mexico, and the United States share case studies and key lessons learned for successful restoration and renewal of our most vital resource. The aim of this guidebook is to offer essential restoration guidance that allows a start-to-finish overview of what it takes to bring back a damaged stream corridor. Chapters cover planning such emerging themes as climate change and environmental flow, the nuances of implementing restoration tactics, and monitoring restoration results. *Renewing Our Rivers* provides community members, educators, students, natural resource practitioners, experts, and scientists broader perspectives on how to move the science of restoration to practical success. *Rio Salado Environmental Restoration of Two Sites Along the Salt River: (1) Phoenix Reach and (2) Tempe Reach, Feasibility Report, Phoenix and Tempe*, 1998

Stewardship Across Boundaries Richard L. Knight, Peter Landres, 2013-06-17 Every piece of land, no matter how remote or untrammelled, has a boundary. While sometimes boundary lines follow topographic or biological features, more often they follow the straight lines of political

dictate and compromise Administrative boundaries nearly always fragment a landscape resulting in loss of species that must disperse or migrate across borders increased likelihood of threats such as alien species or pollutants and disruption of natural processes such as fire Despite the importance and ubiquity of boundary issues remarkably little has been written on the subject Stewardship Across Boundaries fills that gap in the literature addressing the complex biological and socioeconomic impacts of both public and private land boundaries in the United States With contributions from natural resource managers historians environmentalists political scientists and legal scholars the book develops a framework for understanding administrative boundaries and their effects on the land and on human behavior examines issues related to different types of boundaries wilderness commodity recreation private public presents a series of case studies illustrating the efforts of those who have cooperated to promote stewardship across boundaries synthesizes the broad complexity of boundary related issues and offers an integrated strategy for achieving regional stewardshi Stewardship Across Boundaries should spur open discussion among students scientists managers and activists on this important topic It demonstrates how legal social and ecological conditions interact in causing boundary impacts and why those factors must be integrated to improve land management It also discusses research needs and will help facilitate critical thinking within the scientific community that could result in new strategies for managing boundaries and their impacts **Let the Water Do the Work**

Bill Zeedyk, Van Clothier, 2014 Let the Water Do the Work is an important contribution to riparian restoration By thinking like a creek one can harness the regenerative power of floods to reshape stream banks and rebuild floodplains along gullied stream channels Induced Meandering is an artful blend of the natural sciences geomorphology hydrology and ecology which govern channel forming processes Induced Meandering directly challenges the dominant paradigm of river and creek stabilization by promoting the intentional erosion of selected banks while fostering deposition of eroded materials on an evolving floodplain The river self heals as the growth of native riparian vegetation accelerates the meandering process Not all stream channel types are appropriate for Induced Meandering yet the Induced Meandering philosophy of going with the flow can inform all stream restoration projects Induced meandering strives to understand rivers as timeless entities governed by immutable rules serving their watersheds setting their own timetables and coping with their own realities as they carry mountains grain by grain to the sea Anyone with an interest in natural resource management in these uncertain times should read this book and put these ideas to work **Proceedings RMRS. ,1998**
