Companion Robots for Older Adults Sofia Thunberg,2024-05-06 This thesis explores through a mixed methods approach what happens when companion robots are deployed in care homes for older adults by looking at different perspectives from key stakeholders Nine studies are presented with decision makers in municipalities care staff and older adults as participants and the studies have primarily been carried out in the field in care homes and activity centres where both qualitative e.g observations and workshops and quantitative data surveys have been collected The thesis shows that companion robots seem to be here to stay and that they can contribute to a higher quality of life for some older adults It further presents some challenges with a certain discrepancy between what decision makers want and what staff might be able to facilitate For future research and use of companion robots it is key to evaluate each robot model and potential use case separately and develop clear routines for how they should be used and most importantly let all stakeholders be part of the process The knowledge contribution is the holistic view of how different actors affect each other when emerging robot technology is introduced in a care environment Den h r

then there are also vacuum robots available for the average household's chores. In Japan there is a robot teacher that can mimic a wide range of human emotions including anger at uncooperative students thanks to eighteen small motors hidden beneath the latex skin covering her face. The Japanese government hopes to use robots to fill jobs left vacant by an anticipated labor shortage due to an aging population. In the United States robots even help with surgery allowing for incisions to be cut much smaller than they would be otherwise meaning fewer complications and faster recovery times. This fascinating book in the Fact Atlas series explores the history of robots from the very first robot designed by Leonardo da Vinci to predictions of the roles robots will play in our future. Kids will learn about how robots are often modeled after real life forms such as bees, sharks, and of course humans. *Robots* also takes into account the robots in pop culture robots we have imagined could be a part of our future. Readers can decide for themselves whether or not they think robots should be developed to their fullest potential or kept in check by safety limitations.

Intelligent Educational Robots Stamatiou Papadakis, Georgios Lampropoulos, 2024-12-16 This book focuses on recent advances in maker education and in human robot interaction and on the integration of intelligent educational robots (IER) in P-12 education. It covers various topics and trends about the evolution of maker education and the use of IER and artificial intelligence (AI) in P-12 education. This book offers an overview of recent research into the adoption, integration, advancements, and impact of IER and AI in education. It helps researchers, practitioners, professionals, and academicians of various scientific disciplines explore and better comprehend the state of the art of maker education, AI, and IER, their advancements, impact, and future potentials in education.

Fuzzy Systems and Data Mining IX Antonio J. Tallón-Ballesteros, Raquel Beltrán-Barba, 2023-12-15 Fuzzy systems and data mining are indispensable aspects of the digital technology on which we now all depend. Fuzzy logic is intrinsic to applications in the electrical, chemical, and engineering industries and also in the fields of management and environmental issues. Data mining is indispensable in dealing with big data, massive data, and scalable, parallel, and distributed algorithms. This book presents the proceedings of FSDM 2023, the 9th International Conference on Fuzzy Systems and Data Mining, held from 10-13 November 2023 as a hybrid event with some participants attending in Chongqing, China, and others online. The conference focuses on four main areas: fuzzy theory, algorithms, and systems; fuzzy application; data mining; and the interdisciplinary field of fuzzy logic and data mining, and provides a forum for experts, researchers, academics, and representatives from industry to share the latest advances in the field of fuzzy sets and data mining. This year, topics from two special sessions on granular ball computing and the application of generative AI, as well as machine learning and neural networks, were also covered. A total of 363 submissions were received, and after careful review by the members of the international program committee, 110 papers were accepted for presentation at the conference and publication, here representing an acceptance rate of just over 30%. Covering a comprehensive range of current research and developments in fuzzy logic and data mining, the book will be of interest to all those working in the field of data science.

introductory guide includes discussion of the major contemporary positions on compatibilism and incompatibilism and of the central arguments that are a focus of the current debate including the Consequence Argument manipulation arguments and Frankfurt's famous argument against the Principle of Alternate Possibilities *How Our Love of Dogs Creates Social Conflict* James K. Beggan, 2022-09-07 For the last twenty thousand years dogs and people have shared a unique bond in the animal kingdom In *How Our Love of Dogs Creates Social Conflict* James K Beggan uses symbolic interaction to examine the meaning that dogs have for people as friends and family members Although many animal rights advocates express dismay over the subordinate status ownership implies the author argues that ownership creates a powerful psychological connection that makes it easier for people to imbue dogs with humanlike characteristics Beggan outlines how dogs sensitivity to inequity in combination with a high degree of cognitive capacity makes it possible for dogs to be active agents in creating conflict between people The author's analysis of social conflict between people over their dogs connects to profound philosophical concepts about the nature of mind the relationship between humans and animals and the moral responsibility human beings have to dogs and other animals *New Perspectives on Human-Animal Interactions* Sarah Knight, Harold Herzog, Rick H. Hoyle, 2009-09-01 Animals are important in human psychological and cultural life and our relationships with other species are psychological and morally complicated This special issue presents a series of original research articles concerning attitudes towards animals the ethics of their treatment the effects of companion animals on human health and psychological well being and the role that culture plays in our interactions with other species The articles illustrate the scope of the new field of human animal relationships the variety of research approaches and the implications of research findings for social policy
