**From Pain to Violence** Felicity de Zulueta, 2006-05-01

Violence is all around us yet despite its widespread prevalence we remain unclear about its causes In this book Felicity de Zulueta begins by defining violence as distinct from aggression and then attempts to trace its origins highlighting the polarization between those who believe mankind to be innately violent and those who see violence as the outcome of man's life experiences As a result of her investigations the author suggests that the current high level of violence may well be linked to the effects of childhood and adult trauma which appear to be far more widespread than has hitherto been acknowledged These findings are relevant to understanding why normal people can become violent in certain conditions This is a second edition and has been fully updated A new chapter on terrorism has been added

*The Green Halo* Erazim V.

Kohák, 2000 The Green Halo is a readable introduction to the vast field of contemporary ecological thought It is a basic education in environmental philosophy and a welcome propaedeutic for understanding the most crucial problem facing humankind in the coming century How can humans live on this Earth so that they do not destroy the preconditions for their own existence

Systems Thinking and Viable Systems Sergio Barile, 2024-02-26 In the last few decades managerial and business studies have shown an increasing inability to explain and forecast emergent dynamics in society economics and the environment Consolidated managerial approaches and business theories seem to be incapable of communicating and depicting the ongoing evolution and new perspectives are required to support both researchers and practitioners in tracing new paths for development Building upon the constructivist approach this book illustrates the multiple advantages that systems thinking can offer in supporting a holistic understanding of social and economic phenomena The book proposes a representation of the firm as a viable system and represents its functioning and decision making processes through a recursive depiction that can be applied for each of the multiple levels through which socio economic environments are defined As a result of the focus on the differences between decision making and problem solving processes the book enriches current knowledge about systems thinking and provides useful instruments through which both researchers and practitioners can effectively understand the multiple variables able to influence decisions and actions within a firm's configuration The book is

aimed at both postgraduate students and researchers interested in the multiple dimensions of systems thinking      *The Language of Living Matter* Bernd-Olaf Küppers, 2022-06-01 This book by an eminent scientist and philosopher provides strong evidence for the claim that language is a general principle of Nature rooted exclusively in physical and chemical laws The author's radical idea inevitably leads us to view the essence origin and evolution of life in a completely new light It shifts the coordinates of our scientific world view in favor of an overarching concept of language that is able to bridge the gap between matter and mind At the same time it removes a blind spot in the Darwinian concept of evolution To justify this far reaching idea the book takes a long and deep look at our scientific and philosophical thinking at language as such at science's claim to truth and at its methods unity limits and perspectives These are the cornerstones structuring the book into six thematically self contained chapters rounded off by an epilogue that introduces the new topic of Nature's semantics The range of issues covered is a testimony to how progress in the life sciences is transforming the whole edifice of science from physics to biology and beyond The book is aimed at a broad academic and general readership it requires no mathematical expertise      *Science, Technology, and Public Policy: Books, monographs, documents, and articles in journals, 1968 through 1970* Lynton Keith Caldwell, William B. DeVille, Hedvah L. Shuchman, 1968      **Thinking Through Systems Thinking** Ion Georgiou, 2007 Guided by an original analysis of the fundamental idea of emergent property Thinking Through Systems Thinking uncovers the distinct significance but also incompleteness of the systems approach as a theory of human epistemological engagement      **Norbert Elias** Richard Kilminster, 2007-11-13 Few sociologists of the first rank have scandalised the academic world to the extent that Elias did Developed out of the German sociology of knowledge in the 1920s Elias's sociology contains a sweeping radicalism which declares an academic war on all your houses His sociology of the human condition sweeps aside the contemporary focus on modernity and rejects most of the paradigms of sociology as one sided economic teleological individualistic and or rationalistic As sociologists Elias also asks us to distance ourselves from mainstream psychology history and above all philosophy which is summarily abandoned although carried forward on a higher level This enlightening book written by a close friend and pupil of Elias is the first book to explain the refractory uncomfortable side of Elias's sociological radicalism and to brace us for its implications It is also the first in depth analysis of Elias's last work The Symbol Theory in the light of selected contemporary developments in archaeology anthropology and evolutionary theory      **Social Information Transmission and Human Biology** Jonathan CK Wells, Simon Strickland, Kevin Laland, 2006-05-22 Recent research has emphasized that socially transmitted information may affect both the gene pool and the phenotypes of individuals and populations and that an improved understanding of evolutionary issues is beneficial to those working towards the improvement of human health In response to a growing interest across disciplines for information regarding the contribution of social behavior to a range of biological outcomes Social Information Transmission and Human Biology connects the work of evolutionary theorists and those dealing with practical issues in human health and
