*Climate Change Adaptation Strategies in Agriculture and Allied Sectors* GSLHV Prasad Rao,2011-03-01 Weather related disasters like occurrence of floods droughts heat wave and

cold waves is not uncommon across the Country It is true world over Increase in sea surface temperature and sea level has potential impact on monsoon uncertainties water resources shift in coastal population and marine products Vulnerability to extreme weather events is higher than vulnerability to changing average climatic conditions The society linked sectors like agriculture biodiversity fisheries forestry water resources human and animal health and infrastructure are the worst sufferers in the event of weather uncertainties As a result it is realized that food security is under threat due to global warming The book deals with climate change impacts and adaptation strategies in agriculture horticulture plantation crops in the humid tropics livestock fisheries forestry water resources and biodiversity The invited and research papers included in the book provide clues for developing adaptation and mitigation strategies in coping up with the expected climate change in future Although global foodgrains production is likely to increase in tune with rising population and demand in ensuing decades it may suffer unless new approaches to adapt crop plants to climate change are adopted Therefore Research and education policy in climate change adaptation and mitigation is the need of the hour to address the climate issues in various sectors as the frequency of occurrence of floods and droughts cold and heat waves are likely to increase under projected climate change scenarios and a threat to food security

*Sustainable Horticulture Development and Nutrition Security (Vol. 3)* Prem Nath, 2018-01-01 We all are indebted to nature for providing us food and its resources for our subsistence and survival In the food domain cereal and legume grains occupy the front line whereas horticultural crops have occupied the second line of defense For healthy diet cereals and legumes provide us with carbohydrates and protein whereas fruits and vegetables provide us minerals and vitamins Both macro and micro nutrients are essential for human growth and development The fruits and vegetables are the major source of micro nutrients It is estimated that up to 2.7 million lives could potentially be saved each year if fruit and vegetable production was sufficiently increased Both at national and international levels food and agriculture horticulture development plans and estimates are basically developed framed and implemented and narrowed down to cereal production In the present context of attaining nutrition security this mode of thinking on food needs to be changed to nutrients which will include necessarily all those crops including fruit and vegetables which provide all macro and micro nutrients to ensure balanced nutrition needed for good human health The present publication has attempted to reflect and discuss the above views and ideas on the subject of sustainable horticulture development and nutrition security in nine chapters with 32 articles by 32 authors
