Saving The Condor:

Saving the Condor Nancy Schorsch,1991 Tells the story of biologists efforts to save the last California condors from extinction by breeding them in captivity and returning them to the wild **Return of the Condor** John Moir,2023-11-21 A heart stopping saga of the rescue from the very brink of extinction of one of the grandest of all birds Thomas Lovejoy president of the Amazon Biodiversity Center RETURN OF THE CONDOR is the riveting account of one of the most dramatic attempts to save a species from extinction in the history of modern conservation Features a new Afterword by the author With the condor s population down to only twenty two birds in the 1980s and their very survival in doubt the condor recovery team flouted conventional wisdom and pursued a controversial strategy to pull the bird back from the brink of extinction Thus began the ongoing decades long program to reestablish America s largest bird in its ancient home in Western skies Award winning science writer John Moir takes readers into the backcountry to get to know the recovery program scientists as well as some of the individual condors These are stories of peril uncertainty and controversy Woven throughout these tales of heartbreak and triumph is the extraordinary dedication of the humans who have sometimes risked their lives for this charismatic intelligent and social bird Despite the program s remarkable successes the condor s narrative is still unfolding with a number of challenges remaining This includes the dilemma of lead poisoning among free flying condors that is a major obstacle to the bird s recovery The new Afterword presents a compelling examination of the progress and continuing adversity facing the condor recovery effort since the first edition of the book was published Finalist for the William Saroyan International Writing Prize from the Stanford University Libraries Honorable Mention from the National Association of Science Writers The California Condor Alison Imbriaco,2008 This book describes the endangered status of the California condor explains that the presence of lead is one of the greatest threats to the survival of California condors and discusses the breeding programs of the California condors California Condors Meish Goldish,2009-01-01 True tales of wildlife survival show how the heroic efforts of people who stepped in when all seemed lost have brought these endangered animals back from the brink of extinction **The Cost of Freedom** Lori Polydoros,19?? Condors have been around for millions of years but sharing the planet with human beings has never been easy Only 22 Condors were left in1983 Thanks to a group of scientists and conservationists the last remaining condors were caught and bred in captivity bringing them back from the brink of extinction The big question now is whether they ll ever learn to survive on their own **After the Grizzly** Peter S. Alagona,2020-02-25 This book traces the history of threats to species and habitat in California from the time of the Gold Rush to the present The author shows how over the course of more than a century scientists and conservationists came to view the fates of endangered species as dependent on the ecological conditions and human activities in the places where those species lived The story begins with the tale of the state s extinct mascot the California grizzly and the conservation movements and laws that followed its disappearance The second half of the book focuses on four high profile endangered species the

California condor the desert tortoise the San Joaquin kit fox and the Delta smelt The author offers an account of how Americans developed a civil system in which imperiled species serve as proxies for broader conflicts about the politics of place The book concludes that the challenge for conservationists in the twenty first century will be to expand habitat conservation beyond protected wildlands to build more diverse and sustainable landscapes

The Preservation and Valuation of Biological Resources Gordon H. Orians,1990 *Wild Animal Pets* William Lovell Finley,Irene Barnhart Finley,1928 *In a Dark Wood* Alston Chase,2017-07-12 In a Dark Wood presents a history of debates among ecologists over what constitutes good forestry and a critique of the ecological reasoning behind contemporary strategies of preservation including the Endangered Species Act Chase argues that these strategies in many instances adopted for political rather than scientific reasons fail to promote biological diversity and may actually harm more creatures than they help At the same time Chase offers examples of conservation strategies that work but which are deemed politically incorrect and ignored In a Dark Wood provides the most thoughtful and complete account yet written of radical environmentalism And it challenges the fundamental but largely unexamined assumptions of preservationism such as those concerning whether there is a balance of nature whether all branches of ecology are really science and whether ecosystems exist In his new introduction Chase evaluates the response to his book and reports on recent developments in environmental science policy and politics In a Dark Wood was judged by a recent national poll to be one of the one hundred best nonfiction books written in the English language during the twentieth century A smashing good read this book will be of interest to environmentalists ecologists philosophers biologists and bio ethicists and anyone concerned about ecological issues *Is the California Condor Worth Saving?* J. Subcommittee on Fisheries and Wildlife Conservation and the Environment,1990

Nature's Ghosts Mark V. Barrow,2009-10-15 As Mark V Barrow Jr reveals in Nature s Ghosts the threat of species loss has haunted Americans since the early days of the republic Barrow shows how Americans came to understand that it was not only possible for entire species to die out but that humans themselves could be responsible for their extinction These fascinating stories of endangered animals and the dedicated individuals who have studied and struggled to protect them offer an unprecedented view of what we ve lost and a stark reminder of the hard work of preservation still ahead **Bulletin** American Game Protective Association,1926 Tehachapi Upland Multi-species Habitat Conservation Plan ,2008 **Parks & Recreation** ,1928 *Endangered Species Technical Bulletin* ,1977 *Condor'S Passage* Rafaello Fernandez,2014-10-25 A young man fulfills his long yearned desire to go to sea and earns his way through the ranks of the Spanish kings admiralty in the 17th century to find friendship and love endure loss and hardship experience adventure and intrigue Current Ornithology D.M. Power,2013-06-29 This edited series has three principal goals The first is to provide information in a relatively concise way for researchers needing an over view of specific disciplines The second is to provide an update on

specific schools of thought bringing together ideas from colleagues whose works often appear in a variety of journals And the third is to stimulate and suggest directions for new research Volume 6 continues the tradition established by the previous editor and editorial board in providing new information updating our understanding of specific disciplines and stimulating new research In the first chapter Randall Breitwisch examines mortality patterns and sex ratios in monogamous birds He argues that there are many more components to measuring parental investment than are often realized our knowledge is weak in several areas Understanding the evolution of mating systems depends on better distinguishing the different intensities of natural selection that operate on males and females Gregory Butcher and Sievert Rohwer develop a framework for assessing the role of colorfulness in birds They propose several hypotheses to test and advocate evaluating more than one hypothesis at a time Future work on the evolution of distinctive coloration and of sexual and age dimorphism must take these ideas into account

Conservation in the Anthropocene Fred Van Dyke, 2025-03-06 This book provides a critical assessment of conservation in the Anthropocene grounded in the personal historical and cultural development of human interaction with nature The author argues that conservation can no longer be primarily about preserving nature but must adapt its efforts to promote changes through which humans create a landscape that is neither abandoned nor degraded but used well by humans and non humans alike The book first reviews the origin of ideas and conditions that have led to the concept and classification of the Anthropocene and explores how the author's own interactions with nature were shaped through his experience as a conservation biologist Next it considers how humans have come to be the primary drivers of ecological activity geological events and climate change Chapters then focus on the need for new conservation thinking regarding novel ecosystems urban conservation the role of Indigenous Peoples in conservation and the value of protected areas PAs parks and wilderness The book concludes by identifying strategies for effective conservation and argues for a new formulation of conservation values that redefine human relationships and interaction with nature Chapters are enlivened by the personal experiences of the author and the first person narratives of conservation activists and scientists throughout the world who are learning to practice and succeed in conservation efforts under Anthropogenic conditions Drawing on global examples this book will be of great value to students and scholars of biodiversity conservation and environmental science ready to consider a new way of looking at the care and nurture of nature in the Anthropocene
