Systems Science and Cybernetics - Volume I Francisco Parra-Luna, 2009-10-30 The subject Systems sciences and cybernetics is the outcome of the convergence of a number of trends in a larger current of thought devoted to the growing complexity of primarily social objects and arising in response to the need for globalized treatment of such objects This has been magnified by the proliferation and publication of all manner of quantitative scientific data on such objects advances in the theories on their inter relations the enormous computational capacity provided by IT hardware and software and the critical revisiting of subject object interaction not to mention the urgent need to control the efficiency of complex systems where efficiency is understood to mean the ability to find a solution to many social problems including those posed on a planetary scale The result has been the forging of a new academically consolidated scientific trend going by the name of Systems Theory and Cybernetics with a comprehensive multi disciplinary focus and therefore apt for understanding realities still regarded to be inescapably chaotic This subject entry is subdivided into four sections The first an introduction to

systemic theories addresses the historic development of the most commonly used systemic approaches from new concepts such as the so called geometry of thinking or the systemic treatment of non systemic identities to the taxonomic entropic axiological and ethical problems deriving from a general systemic cybernetic conceit Hence the focus in this section is on the historic and philosophical aspects of the subject Moreover it may be asserted today that beyond a shadow of a doubt problems in particular problems deriving from human interaction but in general any problem regardless of its nature must be posed from a systemic perspective for otherwise the obstacles to their solution are insurmountable Reaching such a perspective requires taking at least the following well known steps a statement of the problem from the determinant variables or phenomena b adoption of theoretical models showing the interrelationships among such variables c use of the maximum amount of wherever possible quantitative information available on each d placement of the set of variables in an environment that inevitably pre determines the problem That epistemology would explain the substantial development of the systemic cybernetic approach in recent decades The articles in the second section deal in particular with the different methodological approaches developed when confronting real problems from issues that affect humanity as a whole to minor but specific questions arising in human organizations Certain sub themes are discussed by the various authors always from a didactic vantage including problem discovery and diagnosis and development of the respective critical theory the design of ad hoc strategies and methodologies the implementation of both qualitative soft system methodologies and formal and quantitative such as the General System Problem Solver or the axiological operational perspective approaches cross disciplinary integration and suitable methods for broaching psychological cultural and socio political dynamisms The third section is devoted to cybernetics in the present dual meaning of the term on the one hand control of the effectiveness of communication and actions and on the other the processes of self production of knowledge through reflection and the relationship between the observing subject and the observed object when the latter is also observer and the former observed Known as second order cybernetics this provides an avenue for rethinking the validity of knowledge such as for instance when viewed through what is known as bipolar feedback processes through which interactions create novelty complexity and diversity Finally the fourth section centres around artificial and computational intelligence addressing sub themes such as neural networks the simulated annealing that ranges from statistical thermodynamics to combinatorial problem solving such as in the explanation of the role of adaptive systems or when discussing the relationship between biological and computational intelligence

Economic Systems and Human Rights Francesco Vigliarolo, 2025-01-15 Economic systems driven by monetary interests have enabled individuals international institutions and governments to prioritize financial gain and budget constraints over people This has placed global dominance above human rights This edited volume tackles the relationship between human rights and economic systems providing new ways to help countries prioritize human rights in their economies It includes contributions from scholars actively involved with the UNESCO Chair in Economic Systems and

Human Rights founded at the National University of La Plata These contributors specialize in a range of topics within different disciplines including economics sociology history geography law and philosophy Providing historical insights into past and present conditions the contributors explore the best ways to reform modern economic systems to ensure they promote human rights The first half of the book includes theoretical proposals and underlying themes while the second half offers concrete models and practices for use in today's dominant economic systems Unique contributions within chapters include frameworks readers can use to apply socioeconomic theory at both national and international levels The book examines structural problems such as socio environmental crises increased rates of inequality and gaps between the economy and society It discusses the transformation of dominant socio economic theory as it relates to financial systems productive labor markets social participation and the relationship between the economy society and the environment Chapters directly address the loss of the ontological function in economies and propose new approaches to existing economic systems drawing on scholars such as Adam Smith who is well known for his idea of the invisible hand The resulting book presents a modern approach to national and international well being built around human rights Readers will learn about the socioeconomic models and practices that best promote economic socialization and how this relates to global values shared across economies

The Routledge Handbook of Comparative Economic Systems Bruno Dallago, Sara

Casagrande, 2022-12-19 The Routledge Handbook of Comparative Economic Systems examines the institutional bases of economies and the different ways in which economic activity can function be organized and governed It examines the complexity of this academic and research field assessing the place of comparative economic studies within economics paying due attention to future perspectives and presenting critically important questions analytical methods and relative approaches This complements the recent revival of the systemic view of economic governance which was accelerated by the COVID 19 pandemic and likely even more the renewed East West clash epitomized by the Russian invasion of Ukraine and the West's reaction to it The Handbook is divided into five parts Each part deals with an issue of relevance for the discipline The first and second parts look at the subject content and approach of the discipline and its comparative method The third part looks at the idiosyncratic nature of different economic systems and their constituent elements The fourth part considers the outcomes that different economic systems generate and how these outcomes change following the evolution and transformation of economic systems The last part takes stock and looks ahead at the challenges from a theoretical and applied perspective and the exogenous and endogenous factors promoting the advancement of the discipline including the interaction between and competition among varied approaches and opposing paradigms The Handbook brings together leading international contributors to reflect on the relevant debates and case or country studies provides a balanced overview of the results achieved and current knowledge as well as evolving issues and new fields of research The book provides researchers students and analysts with a complete critical and forward looking presentation and analysis of the

The Shape of Social Inequality David Bills, 2005-08-24 This volume brings together former students, colleagues and others influenced by the sociological scholarship of Archibald O. Haller to celebrate Haller's many contributions to theory and research on social stratification and mobility. All of the chapters respond to Haller's programmatic agenda for stratification research. A full program aimed at understanding stratification requires first that we know what stratification structures consist of and how they may vary; second that we identify the individual and collective consequences of the different states and rates of change of such structures; and third, seeing that some degree of stratification seems to be present everywhere, that we identify the factors that make stratification structures change. The contributors to this Festschrift address such topics as the changing nature of stratification regimes, the enduring significance of class analysis, the stratifying dimensions of race, ethnicity and gender, and the interplay between educational systems and labor market outcomes. Many of the chapters adopt an explicitly cross-societal comparative perspective on processes and consequences of social stratification. The volume offers both conceptually and empirically important new analyses of the shape of social stratification.

Integrated Management Robert Sroufe, 2025-04-09 Building on the award-winning success of the first edition, *Integrated Management* offers initiatives we would want to achieve regardless of their proven positive impacts on a single bottom line, as they are practices that benefit the environment and society in dynamic ways that for too long have been overlooked.

The Relevance of Economic Theories C. H. Feinstein, Josef Pajestka, 1980-11-27

The Making and Breaking of Minds: How social interactions shape the human mind Isabella Sarto-Jackson, 2022-04-05 The human brain has a truly remarkable capacity. It reorganizes itself flexibly, adjusting to fluctuating environmental conditions, a process called neuroplasticity. Neuroplasticity provides the basis for wide-ranging learning and memory processes that are particularly profuse during childhood and adolescence. At the same time, the exceptional malleability of the developing brain leaves it highly vulnerable to negative impact from the surroundings. Abusive or neglecting social environments, as well as socioeconomic deprivation and poverty, cause toxic stress and complex traumas that can severely compromise cognitive development, emotional processing, self-perception, and executive brain functions. The neurophysiological changes entailed in impaired emotional regulation lead to heightened anxiety and afflict attachment and the formation of social bonds. Neuroplastic changes following severely adverse experiences are not something that a person grows out of and gets over. These experiences alter the neurobiological and biochemical makeup and cause people to live in an emotionally relabeled world in which the evaluation of any social cue, their behavior, cognition, and state of mind are biased towards the negative. Even more worrying, detrimental neurophysiological consequences are not limited to the traumatized.

individual but are often transmitted to subsequent generations through a process of social niche construction thereby creating a vicious cycle. Thus the making and breaking forces of the brain are epitomized by parents, alloparents, peers and our socioeconomic niche. This book expounds on the formative role that the social environment plays in healthy brain development, especially during infancy, childhood and adolescence. Based on scientific findings, the book advocates for bold measures and responsible stewardship to combat child abuse, maltreatment and child poverty. By bringing together insights from neuroscience, evolutionary biology and social education work, it lays out a fact-based transdisciplinary endeavor that aims at rising to the societal challenge of providing a rewarding perspective to youth at risk. It will be a valuable resource for academics from social education, pedagogy, cognitive science, neuroscience as well as professionals in the fields of social work, pedagogy, education, child welfare.

Effective Cybersecurity Operations for Enterprise-Wide Systems Adedoyin, Festus Fatai, Christiansen, Bryan, 2023-06-12

Cybersecurity or information technology security, IT security, is the protection of computer systems and networks from information disclosure, theft of or damage to their hardware, software or electronic data as well as from the disruption or misdirection of the services they provide. The field is becoming increasingly critical due to the continuously expanding reliance on computer systems, the internet, wireless network standards such as Bluetooth and Wi-Fi, and the growth of smart devices which constitute the internet of things (IoT). Cybersecurity is also one of the significant challenges in the contemporary world due to its complexity both in terms of political usage and technology. Its primary goal is to ensure the dependability, integrity and data privacy of enterprise-wide systems in an era of increasing cyberattacks from around the world. *Effective Cybersecurity Operations for Enterprise Wide Systems* examines current risks involved in the cybersecurity of various systems today from an enterprise-wide perspective. While there are multiple sources available on cybersecurity, many publications do not include an enterprise-wide perspective of the research. The book provides such a perspective from multiple sources that include investigation into critical business systems such as supply chain management, logistics, ERP, CRM, knowledge management and others. Covering topics including cybersecurity in international business, risk management, artificial intelligence, social engineering, spyware, decision support systems, encryption, cyber attacks and breaches, ethical hacking, transaction support systems, phishing and data privacy, it is designed for educators, IT developers, education professionals, education administrators, researchers, security analysts, systems engineers, software security engineers, security professionals, policymakers and students.

Computer Integrated Production Systems and Organizations Felix Schmid, Stephen Evans, Andrew W.S. Ainger, Robert J. Grieve, 2012-12-06

The Background to the Institute The NATO Advanced Study Institute (ASI) People and Computers: Applying an Anthropocentric Approach to Integrated Production Systems and Organisations came about after the distribution of a NATO fact sheet to Brunel University which described the funding of ASIs. The embryonic director of the ASI brought this opportunity to the attention of the group of people, some at Brunel and some from outside, who were together responsible for the teaching and management of the course in Computer

Integrated Manufacturing CIM in Brunei s Department of Manufacturing and Engineering Systems This course had been conceived in 1986 and was envisaged as a vehicle for teaching manufacturing engineering students the technology of information integration through project work While the original idea of the course had also included the organisational aspects of CIM the human factors questions were not considered This shortcoming was recognised and the trial run of the course in 1988 contained some lectures on people issues The course team were therefore well prepared and keen to explore the People Organisation and Technology POT aspects of computer integration as applied to industrial production A context was proposed which would allow the inclusion of people from many different backgrounds and which would open up time and space for reflection The proposal to organise a NATO ASI was therefore welcomed by all concerned **Creative**

Technological Change Ian Mcloughlin,2002-03-11 Creative Technological Change draws upon a wide range of thinking from organisational theory innovation studies and the sociology of technology It explores the different ways in which these questions have been framed and answered especially in relation to new virtual technologies The idea of metaphor is used to capture the differences between and strengths and weaknesses of various ways of conceptualising the technology organisation relationship This approach offers the possibility of developing new ways of thinking about viewing and ultimately responding creatively to the organisational challenges posed by technological change *Community-based*

Control of Invasive Species Theodore Alter,Paul Martin,Don Hine,Tanya Howard,2019-06-01 Invasive species are among the greatest challenges to environmental sustainability and agricultural productivity in the world One of the most promising approaches to managing invasive species is voluntary citizen stewardship However in order for control measures to be effective private citizens often need to make sustained and sometimes burdensome commitments Community Based Control of Invasive Species is based on five years of research by leading scholars in natural resource and human behavioural sciences which involved government and citizen groups in Australia and the United States It examines questions including how can citizens be engaged in voluntarily managing invasive species what communication strategies will ensure good motivation and coordination and how can governing bodies support citizens in their efforts With chapters on institutional frameworks changing governance systems thinking organisational learning engagement communication and behavioural change this book will be a valuable reference for researchers and practitioners involved in natural resources management **Handbook of**
