the immune system and summarising how different forms of exercise affect the characteristics and functioning of the immune system this new and fully revised edition will explore exercise immunology in the context of immune ageing cancer autoimmune diseases and cardiometabolic disease In addition the authors discuss other factors that impact immune health such as nutrition and environmental stressors and explain the physiological basis of how exercise changes immune function across the healthspan and lifespan This book is written by leading exercise immunologists and is structured to provide a suggested curriculum of an exercise immunology degree component Every chapter includes summaries of current and up to date research and offers practical guidelines to translate laboratory based information into clinical settings This textbook is essential for any exercise immunology degree component or advanced exercise physiology degree and will be vital reading for students in exercise and biological sciences and clinicians and researchers interested in the therapeutic applications of exercise

Diet, immunity and inflammation M. Gleeson, 2013-09-30 The chapter begins by discussing the impact of intensive exercise training on immune function and susceptibility to infection in athletes It then reviews the evidence that diet and nutritional supplements can modify immune responses to exercise and reduce infection incidence symptom severity or duration in endurance athletes
