Primary Care Nutrition David Heber, Zhaoping Li, 2017-07-14 This book contains the necessary knowledge and tools to incorporate nutrition into primary care practice As a practical matter this effort is led by a dedicated primary care physician with the help of motivated registered dietitians nurses psychologists physical therapists and office staff whether within a known

practice or by referral to the community. It is essential that the nutrition prescription provided by the physician be as efficient as possible. While many team members have superior knowledge in the areas of nutrition, exercise, and psychology, the health practitioner remains the focus of patient confidence in a therapy plan. Therefore, the endorsement of the plan rather than the implementation of the plan is the most important task of the physician. This book proposes a significant change in attitude of primary health care providers in terms of the power of nutrition in prevention and treatment of common disease. It features detailed and referenced information on the role of nutrition in the most common conditions encountered in primary care practice. In the past, treatment focused primarily on drugs and surgery for the treatment of disease, with nutrition as an afterthought. Advanced technologies and drugs are effective for the treatment of acute disease, but many of the most common diseases, such as heart disease, diabetes, and cancer, are not preventable with drugs and surgery. While there is mention of prevention of heart disease, this largely relates to the use of statins, with some modest discussion of a healthy diet. Similarly, prevention of type 2 diabetes is the early introduction of metformin or intensive insulin therapy.

Nutrition and Immunity
M. Gershwin, 2012-12-02

Nutrition and Immunity discusses the interaction between nutrition, immune function, and immunity based on an empirical and epidemiologic point of view. It is organized into 14 chapters that focus on experimental studies on laboratory animals, including animal models to isolate specific factors in the interaction between nutrition and immunity. The book starts with an introduction to the potential impact of nutritional factors on immune responsiveness. Two chapters deal with the evaluation of immune function and nutritional assessment. Other chapters present classic observations on malnutrition and infectious disease involving field studies as well as studies on the effect of nutritional factors on immune ontogeny. The following chapters examine issues related to caloric intake, proteins, minerals, vitamins, lipids, breast milk, and alcohol, as well as their effects in immune function and immunity. The book's final chapters cover future directions and the potential role of nutritional modulation in immune dysfunction. Each chapter is meant to be an authoritative review, presenting the state of the art as well as providing key illustrations from classic papers in a given field. Nutritionists, immunologists, scientists, and researchers will find this book very helpful in expanding their knowledge in the interrelationship between nutrition and immunity.
