This report also offers facts on the mineral content of rations and its intake by military personnel and addresses the potential effects of nutrient deficiencies due to inadequate intake or higher requirements during military operations. **Mineral Requirements for Military Personnel** provides information and recommendations on the development and uses of MDRIs and a description of strategies to increase intake of specific minerals whether via usual foods fortification or supplementation. This report features a description of the metabolism and needs for selected minerals by military personnel under garrison training, recommendations on mineral intake levels and an assessment of mineral level adequacy in operational rations. This report also includes a prioritization of the research needed to answer information gaps and details of study designs required to gain such information.

Volume 8 of **Advances in Nutritional Research** deals with several topics of prime current interest in nutritional research including the role of nutrition in hypertension, the infections associated with protein energy malnutrition and in pathological conditions associated with the generation of oxygen radicals in the tissues as well as with topics of ongoing interest. Recent research indicates that reduction of obesity, of alcohol intake and of sodium intake by salt sensitive individuals are the most effective non-pharmacological means of reducing high blood pressure. A new approach to therapy for infections caused by protein energy malnutrition based on restoration of immunocompetence by administration of thyroid and anti-glucocorticoid hormones is presented. Current research into the role of nutrition in modulating tissue

damage caused by oxygen radicals generated in various pathologies is reviewed Two chapters deal with perinatal nutrition one with the transfer of nutrients across the placenta and the other with the energy requirements of term and preterm infants Another dicusses methods of assessing the nutritional status of hospitalized patients vii Contents Chapter 1 The Transfer of Nutrients across the Perfused Human Placenta Joseph Dands 1 Introduction 1 2 Comments on Comparative Placentology 1 3 The Perfusion Technique 3 4 Review of Transfer Experiments 3 4 1 Transfer of Glutamic Acid 3 4 2 Transfer of Riboflavin 6 5 Potentials and Umltations 9 References 10
