Prostaglandin Inhibitors In Tumor Immunology And Immunotherapy:

Prostaglandin Inhibitors in Tumor Immunology and Immunotherapy Jules E. Harris, Donald P. Braun, Kenning M. Anderson, 2024-12-06 This book provides an updated overview of eicosanoid metabolism It also presents a timely discussion of eicosanoid metabolism in the process of tumor cell metastasis in chemoprotection and radioprotection associated with cancer therapy and in cell differentiation The book focuses on the role of eicosanoids in the immunology of malignant disease This includes how various immune cell populations in cancer are affected by the secretion and action of various eicosanoids and metabolites of eicosanoids and how these processes may be affected by various pharmacological manipulations and interventions to augment anti tumor immunity Head and neck cancer is covered in great detail to illustrate a cancer in humans where these considerations are particularly relevant This important volume demonstrates that the principal factor in cancer patient immunologic deficiency is related to excess secretion by monocytes of prostaglandins Prostaglandin Inhibitors in Tumor Immunology and Immunotherapy Jules E. Harris, Donald P. Braun, Kenning M. Health and Disease Jürgen Fuchs, Maurizio Podda, Lester Packer, 2003-09-12 At the nexus of advances in molecular genetics and findings in redox biology this volume elaborates on the dynamics governing cellular redox states and aggregates the body of evidence linking oxidative stress and redox modulation with a host of monogenetic and polygenetic diseases

Immunotherapy and Small Molecule Inhibitors as Combinational Cancer Therapeutics Mohd Wajid Ali Khan, Shariq Qayyum, Saravanan Rajendrasozhan, Subhash Kumar Tripathi, Mohammad Azhar Aziz, 2023-09-26 Cancer is a multifactorial chronic disease in which several factors contribute to its pathogenesis and progression Our immune system is designed to continuously identify and destroy tumor or aberrant cells However a compromised immune system has been associated with the development of cancer In such immune state cancer cells often develop the ability to hide from the immune surveillance network and adopt intelligent survival tactics which are continuously developing Therefore researchers are focusing on boosting anti tumor immunity by developing novel cancer immunotherapies Adoptive cell based cancer therapies are being used including in vitro expansion and activation of immune effector cells and transfer to the patients Tumor cells can be

eliminated either by directly targeting the tumor cells or by enhancing various functions of the immune system Other than CD8 and NK cell based cytotoxic cancer cell killing there are antigen presenting cells APCs such as dendritic macrophages B cells and T cells which aggressively participate in the activation of anti tumor immune response against many different cancers myeloma lymphoma colorectal melanoma breast colon prostate and ovarian cancers

The Oncobiology of the Prostate D.P. Wood,K.V. Honn,2000-12-20 Prostate cancer PCa is the most common newly diagnosed cancer among men in the United States today With the advent of the prostate specific antigen PSA test the number of newly diagnosed cases has increased tremendously The rates of PCa have increased so dramatically over the last decade that the age adjusted incidence rate of PCa is no greater than that for any other cancer among men in the United States Although PCa rates have risen steadily since 1973 there has been a dramatic acceleration in the late 1980s which has been associated with the introduction and use of PSA for screening and early detection There is now some evidence that the rates may be levelling off and even decreasing in some areas After lung cancer PCa is the leading cause of death due to cancer in men in the United States Although PCa can occur in younger men it is essentially a cancer of elderly men The highest rates of PCa in the world occur among African American men in the United States African Americans have higher rates than Caucasians at all age levels in the United States and adjusting for social economic status does not appear to account for this difference to any appreciable extent There is no clear reason why PCa rates are so much greater among African Americans compared with Caucasians in the United States The reported rates in Africans are substantially lower than those of an African American suggesting that environmental factors have an influence on PCa In spite of this substantial impact on our society PCa remains a relatively understudied disease with an essentially unknown etiology The reviews contained in this book are by no means exhaustive We have however attempted to provide information regarding the pathology of prostate cancer the status of diagnostic and prognostic markers as well as a discussion of our understanding of the molecular basis for the disease The biology of prostate cancer is covered with a discussion on the role of apoptosis in prostate cancer and the suggestion of it being the target for new therapeutic development as well as the role played by integrins and angiogenesis The status of current therapies both hormonal and chemotherapy are also discussed This volume should provide a useful background for individuals wishing to commence an in depth understanding of prostate cancer

Prostaglandins, Leukotrienes and Other Eicosanoids Friedrich Marks,Gerhard Fürstenberger,2008-11-21 Polyunsaturated fatty acids are essential for human cell metabolism As precursors of a very large and extremely versatile family of signaling compounds they play a key role in intracellular communication Eicosanoids constitute one of the most abundant and prominent subfamilies of these fatty acid derivatives which are formed primarily along oxidative pathways Prostaglandins leukotrienes and related eicosanoids have a modulatory function in mammalian cells and are responsible for tissue responses such as inflammation or wound repair Increasing activity in eicosanoid research sheds new light on today s most common diseases including atherosclerosis cancer Alzheimer s allergies

and rheumatic diseases The recent advances already have far reaching implications in medicine This detailed account written by leading experts covers the ground breaking developments in recent eicosanoid research The topics span eicosanoid biogenesis new aspects of their pathophysiology for example their influence on the cardiovascular system as well as the clinical application of synthetic eicosanoids and their antagonists Researchers and students working in biochemistry or in pharmaceutical physiological medicinal and neurochemistry will value this informative introduction to one of the most rapidly developing fields in cell biology

Radioprotectors Edward A. Bump, Kamal Malaker, 2021-12-24 It is essential to minimize damage to normal tissues during radiation therapy and many strategies have been employed in finding the best methods for radioprotection This book integrates chemical biological and clinical perspectives on these strategies and developments providing a comprehensive treatise It emphasizes new concepts in radioprotection aiming to inspire further basic science and clinical progress in radioprotector research *Radioprotectors Chemical Biological and Clinical Perspectives* includes the following topics Early research on radioprotectors WR 2721 an aminothiols prodrug as a radioprotector New results with naturally occurring thiols Nitroxides as effective radioprotectors in vitro and in vivo Radioprotection observed with radical scavengers or antioxidants Bone marrow radioprotection with cytokines and biological modifiers Multiple mechanisms of altering radiation response by eicosanoids Vascular response to radiation and the importance of vascular damage to normal tissue Modifiers of radiation induced apoptosis Survey of clinical trials with radioprotectors Radiation biologists and oncologists cancer researchers and toxicologists will benefit from the findings discussed and strategies for future research
