Protean Self:

The Protean Self Robert Jay Lifton, 1999-11 We are becoming fluid and many sided Without quite realizing it we have been evolving a sense of self appropriate to the restlessness and flux of our time This mode of being differs radically from that of the past and enables us to engage in continuous exploration and personal experiment I have named it the protean self after Proteus the Greek sea god of many forms from *The Protean Self* Robert J. Lifton, 1995-01-04 Proteanism or the protean self describes a psychological phenomenon integral to our times We live in a world marked by breathtaking historical change and instantaneous global communication Our lives seem utterly unpredictable there are few absolutes Rather than collapsing under these threats and pulls Robert Jay Lifton tells us the self turns out to be remarkably resilient Like the Greek god Proteus who was able to change shape in response to crisis we create new psychological combinations immersing ourselves in fresh and surprising endeavors over our lifetimes **The Construction of the Self, Second Edition** Susan Harter, 2015-05-26 An important work from a leading scholar this book explores self development from early childhood to adulthood Susan Harter traces the normative stages that define the emergence of many self processes including self esteem She also addresses individual differences and societal influences on self development Presenting pioneering empirical research Harter shows that increasingly mature features of the self have both benefits and liabilities for psychological adjustment The book highlights the causes and consequences of different types of self representations including those that are unrealistically negative or positive New to This Edition Reflects more than a decade of conceptual empirical and methodological advances Provides a broader sociocultural framework for understanding self development Chapters on emerging adulthood self esteem and physical appearance self processes in the classroom motivation cross cultural issues and the quest for authenticity Expanded chapters on childhood adolescence and the self conscious emotions Increased attention to the liabilities of our contemporary preoccupation with the self Self and Identity : Fundamental Issues Richard D. Ashmore Professor of Psychology Rutgers University, Lee Jussim Associate Professor of Psychology Rutgers University, 1997-04-17 Self and identity have been important yet volatile notions in psychology since its formative years as a scientific discipline Recently psychologists and other social scientists have begun to develop and refine the conceptual and empirical tools for studying the complex nature of self This volume presents a critical analysis of fundamental issues in the scientific study of self and identity These chapters go much farther than merely taking stock of recent scientific progress World class social scientists from psychology sociology and anthropology present new and contrasting perspectives on these fundamental issues Topics include the personal versus social nature of self and identity multiplicity of selves versus unity of identity and the societal cultural and historical formation and expression of selves These creative contributions provide new insights into the major issues involved in understanding self and identity As the first volume in the Rutgers Series on Self and Social Identity the book sets the stage for a productive second century of scientific

analysis and heightened understanding of self and identity Scholars and advanced students in the social sciences will find this highly informative and provocative reading Dr Richard D Ashmore is a professor and Dr Lee Jussim is an associate professor in the Department of Psychology at Rutgers University New Brunswick New Jersey

The Other Self Dēmētrēs Tziovas, 2003-01-01 The Other Self is the first English language book length literary analysis of some of the most celebrated Greek novels of the nineteenth and twentieth centuries A must read for anyone interested in Greek literature and culture it offers both a solid introduction to modern Greek literature and close reading of individual texts Author Dimitris Tziovas focuses on the issues of identity autobiography and social determinism raised in these texts providing a fresh perspective and suggesting new ways of exploring forms of engagement between self and society Greek narratives of self Tziovas suggests are not naked and transparent presentations of existence but articulations of the relationship between the individual and the social world they are negotiations of the past through the otherness of the present A compelling demonstration of the richness and complexity of modern Greek fiction The Other Self provides exciting and challenging interpretations of Greek literature and Greek society

Trauma and Self Charles B. Strozier, Michael Flynn, 1996 This remarkable collection of original essays written by prominent scholars recognized for their achievements in a wide range of disciplines defines trauma as a disruption in the fragile process of symbolization or the human capacity to imbue life with meaning by representing the self s immortality The contributors analyze the multiple meanings and deeper significance of trauma whether of shell shocked war veterans or victims of sexual abuse and they discuss its manifestations both subtle and obvious in human behavior and memory Organized as an honorary volume to Robert Jay Lifton who identified trauma as the core psychological issue of the postmodern world this book demonstrates how trauma and other fundamental breaks in human continuity inform psychiatric historical religious literary political cultural and scientific interpretations of the self

Culture, Self, and Meaning Victor de Munck, 2000-07-14 In this highly informative and interdisciplinary exploration of the relationship between culture and psyche de Munck provides a substantive introduction to pertinent issues theory and empirical studies that lie at the junction of psychology sociology and anthropology This engagingly written text reviews various approaches to such questions as Where is culture located inside or outside the head What is the self is there a single unified self or do many selves inhabit the body Do institutional structures form to meet our needs or are our everyday lives simply a result of institutional structures What is meaning and how do we study it de Muncks examination of these different approaches illuminates the importance of the topic expands readers understanding of human life and points to psychological anthropologys relevance in affecting public policies

Self and Identity Richard D. Ashmore, Lee Jussim, 1997-05-15 Self and identity have been important yet volatile notions in psychology since its formative years as a scientific discipline Recently psychologists and other social scientists have begun to develop and refine the conceptual and empirical tools for studying the complex nature of self This volume presents a critical analysis of fundamental issues in the scientific study of self and identity These chapters

go much farther than merely taking stock of recent scientific progress World class social scientists from psychology sociology and anthropology present new and contrasting perspectives on these fundamental issues Topics include the personal versus social nature of self and identity multiplicity of selves versus unity of identity and the societal cultural and historical formation and expression of selves These creative contributions provide new insights into the major issues involved in understanding self and identity As the first volume in the Rutgers Series on Self and Social Identity the book sets the stage for a productive second century of scientific analysis and heightened understanding of self and identity Scholars and advanced students in the social sciences will find this highly informative and provocative reading Dr Richard D Ashmore is a professor and Dr Lee Jussim is an associate professor in the Department of Psychology at Rutgers University New Brunswick New Jersey

Romantic Science and the Experience of Self Martin Halliwell, 2019-07-23 First published in 1999 this volume follows the work of five influential figures in twentieth century transatlantic intellectual history The work forms the basis for this engaging interdisciplinary study of romantic science In this book Martin Halliwell constructs a tradition of romantic science by indicating points of theoretical intersection in the thought of William James American philosopher Otto Rank Austrian psychoanalyst Erik Erikson Danish German psychologist and Oliver Sacks British neurologist Beginning with the ferment of intellectual activity in late eighteenth century German Romanticism Halliwell argues that only with William James theory of pragmatism early in the twentieth century did romantic science become a viable counter tradition to strictly empirical science Stimulated by recent debates over rival models of consciousness and renewed interest in theories of the self Halliwell reveals that in their challenge to Freud's adoption of ideas from nineteenth century natural science these thinkers have enlarged the possibilities of romantic science for bridging the perceived gulf between the arts and sciences
