Protein Stability and Stabilization Through Protein Engineering Yoshiaki Nosoh, Takeshi Sekiguchi, 1991

Protein Engineering For Industrial Biotechnology Lilia Alberghina, 2000-01-10 Protein engineering has proved to be one of the more fruitful technological approaches in biotechnology being both very powerful and able to generate valuable intellectual property This book aims to present examples in which the application of protein engineering has successfully solved problems arising in industrial biotechnology There is a section *Stability and Stabilization of Enzymes* W.J.J. van den Tweel, A. Harder, R.M. Buitelaar, 2013-10-22 These proceedings contain most of the oral presentations and posters of the international symposium on Stability and Stabilization of Enzymes held in Maastricht in November 1992 They provide a comprehensive overview of the state of the art in this field The possible applications of enzymes are enormous Years of development have seen many enzymes brought onto the market but they are still expensive to use Therefore their efficient application is a prerequisite for common usage One of the main factors for this efficiency is the stability of the enzymes The topics thus ranged from the extensive fundamental thermodynamic knowledge gathered in academic research to the practical applied knowledge built up in industry during the time that enzymes have been produced commercially The subject Stability and Stabilization of Enzymes was discussed from various points of view as was reflected in the themes of the symposium sessions In the session on Fundamentals of Enzyme Stabilisation the thermodynamic background of the phenomenon was highlighted In yet another session the recently developed analytical tools to measure enzyme stability and stabilisation were discussed Further sessions comprised the physical chemical and biological ways to obtain enzyme stabilisation and finally the industrial practice of enzyme stabilisation was treated by representatives of the world's most important enzyme producers The book will be of interest to researchers in universities and industry in the fields of biochemistry enzymology and biotechnology **Stability and Stabilization of Biocatalysts** F.J. Plou, J.L. Iborra, P.J. Halling, 1998-11-10 Six years after the symposium on Stability and Stabilization of Enzymes a second symposium Stability and Stabilization of Biocatalysts on which this book is based was organized At the symposium 210 participants representing all continents came together to learn from 150 oral and poster communications The volume brings up to date the work already going on and identifies possible breakthroughs in the research This timely book therefore presents cutting edge developments in topics such as non covalent processes in solution protein engineering and thermophile enzymes immobilized enzymes non conventional media and whole cells An excellent addition to the available literature it will make a useful contribution to this key area of applied biocatalysis **Stabilizing Protein Function** Ciarán ÓFágáin, 1997-10-17 This book provides an account of our current knowledge of protein stability It demonstrates how an understanding of protein stability has emerged from investigations of protein denaturation inactivation and from studies on stabilizing interactions in proteins

It also describes the stability characteristics of enzymes in nonaqueous media and the special adaptations of thermophilic proteins Manipulation of protein stability is outlined in chapters on the use of additives chemical modification of proteins in solution immobilization protein engineering and long term storage of proteins The book includes numerous case studies and copious references to original research papers and relevant reviews and monographs *Seafood Safety, Processing, and Biotechnology* Fereidoon Shahidi, Yvonne M. Jones, David Kitts, 2020-08-19 Research and development of seafood continues to be productive in terms of new and improved products for both food and non food purposes The use of biotechnology microbiology computer modeling and advanced analytical techniques has led to improvements in processing and product safety This recent book provides extensive new information on these developments The 25 reports were prepared by food scientists specializing in seafood The reports are well illustrated with numerous schematics and some micrographs Extensive reference data is provided in tables and graphs New Lipases and Proteases Abu Bakar Salleh, Noor Zaliha Raja Abdul Rahman (Raja.), Mahiran Basri, 2006 Enzymatic processing of lipids and oils is becoming an important area of research Hydrolytic enzymes such as lipases and proteases are being sought after as the biocatalysts This book focuses on the search and acquisition isolation and purification and the characterisation of these enzymes **Advances in Comparative and Environmental Physiology**, 2012-12-06 ADVANCES IN COMPARATIVE AND ENVIRONMENTAL PHYSIOLOGY helps biologists physiologists and biochemists keep track of the extensive literature in the field Providing comprehensive integrated reviews and sound critical and provocative summaries this series is a must for all active researchers in environmental and comparative physiology The present volume contains six reviews on Motile Activities of Fish Chromatophores Epithelial Transport of Heavy Metals Heavy Metal Cytotoxicity in Marine Organisms Comparative Pulmonary Morphology and Morphometry Molecular Adaptations in Resistance to Penicillins Molecular Adaptations of Enzymes From Thermophilic and Psychrophilic Organisms Enzymes in Food Biotechnology Mohammed Kuddus, 2018-08-23 Enzymes in Food Biotechnology Production Applications and Future Prospects presents a comprehensive review of enzyme research and the potential impact of enzymes on the food sector This valuable reference brings together novel sources and technologies regarding enzymes in food production food processing food preservation food engineering and food biotechnology that are useful for researchers professionals and students Discussions include the process of immobilization thermal and operational stability increased product specificity and specific activity enzyme engineering implementation of high throughput techniques screening to relatively unexplored environments and the development of more efficient enzymes Explores recent scientific research to innovate novel global ideas for new foods and enzyme engineering Provides fundamental and advanced information on enzyme research for use in food biotechnology including microbial plant and animal enzymes Includes recent cutting edge research on the pharmaceutical uses of enzymes in the food industry
