Protoliterary Steps Toward An Anthropology Of Culture:

The Protoliterary Karl Ludwig Pfeiffer, 2002 This is a broad ranging and ambitious attempt to rethink aesthetic and literary studies in terms of an anthropology of symbolic media generally Central to the author's argument is the proposition that the idea of literature at least as it has been understood in the West since the eighteenth century as the paradigm for artistic experience is both limited and limiting In its place the author offers a more general theory of aesthetic experience appropriate to a wide range of media in the term's broadest sense and geared toward performativity and bodily experience The author develops the idea of the protoliterary as a cultural aesthetic discourse prior to and external to the literary as traditionally conceived in Western aesthetics Manifestations of the protoliterary tend to occur within forms of multimedia theatricalization in which suggestive images of the body loom large The appeal of the protoliterary lies in its ability to function on both cognitive and somatic levels thereby neutralizing such distinctions as self society and reality fiction The author's argument is indebted to John Dewey's belief in a basic human need for aesthetic experience a need that can be met in a variety of ways from tattoos and scarification through sports parades and cosmetics to literature opera and film From this basis the book theorizes a history of the development of separate hierarchical arts in the West while suggesting that independent histories of single arts and artistic experience are no longer desirable or even possible Although the genesis of particular forms of media are inextricably linked to specific historical sociological and technological conditions their potential functions and effects are not tied to those conditions nor should they be

Travelling Concepts for the Study of Culture

Birgit Neumann, Ansgar Nünning, 2012-10-01 Bringing together innovative and internationally renowned experts this volume provides concise presentations of the main concepts and cutting edge research fields in the study of culture rather than the infinite multitude of possible themes More specifically the volume outlines different models for the study of culture explores avenues for interdisciplinary exchange assesses key concepts and traces their travels across various disciplinary historical and national contexts To trace the travelling of concepts means to map both their transfer from one discipline approach or culture of research to another and also to identify the transformations which emerge through these processes of transfer The volume serves to show that working with travelling concepts provides a unique strategy for research and research design which can open up a wide range of promising perspectives for interdisciplinary exchange It offers an exemplary overview of an interdisciplinary and international approach to the travelling concepts that organize structure and shape the study of culture In doing so the volume serves to initiate a dialogue that exceeds disciplinary and national boundaries and introduces a self reflexive dimension to the field thus affording a recognition of how deeply disciplinary premises and nation specific research traditions affect different approaches in the study of culture
