Protooncogenes And Growth Factors In Steroid Hormone Induced Growth And Differentiation:

Protooncogenes and Growth Factors in Steroid Hormone Induced Growth and Differentiation Sohaib A. Khan, George M. Stancel, 1993-12-17 Protooncogenes and Growth Factors in Steroid Hormone Induced Growth and Differentiation reviews current information regarding the complex nature of hormone induced cell growth and differentiation The contributors examine the emerging consensus that protooncogenes and growth factors mediate perhaps the most crucial steps leading to cell growth and differentiation The primary objective of this book is to unite the status of current research related to protooncogenes and growth factors from diverse physiological systems to help readers gain a comprehensive understanding of the subject Leading researchers have contributed outstanding chapters pertaining to steroid hormone regulated cell growth and differentiation in normal and or neoplastic tissues This book will appeal to basic science researchers clinicians industrial researchers and graduate students

Hormones and Reproduction of Vertebrates, Volume 3 David O. Norris, Kristin H. Lopez, 2011-05-04 This series of volumes represents a comprehensive and integrated treatment of reproduction in vertebrates from fishes of all sorts through mammals It is designed to provide a readable coordinated description of reproductive basics in each group of vertebrates as well as an introduction to the latest trends in reproductive research and our understanding of reproductive events Whereas each chapter and each volume is intended to stand alone as a review of that topic or vertebrate group respectively the volumes are prepared so as to provide a thorough topical treatment across the vertebrates Terminology has been standardized across the volumes to reduce confusion where multiple names exist in the literature and a comprehensive glossary of these terms and their alternative names is provided A complete essential and up to date reference for research scientists working on vertebrate hormones and reproduction and on animals as models in human reproductive research Covers the endocrinology neuroendocrinology physiology behaviour and anatomy of vertebrate reproduction Structured coverage of the major themes for all five vertebrate groups allows a consistent treatment for all Special chapters elaborate on features specific to individual vertebrate groups and to comparative aspects similarities and differences between them

Hormones and Signaling Lutz Birnbaumer, James Darnell, Ronald Evans, Tony Hunter, Anthony R. Means, Vale Wylie, 1997-11-14 Hormones and Signaling focuses on the mechanism of gene regulation at the cellular level It also covers the way hormones act to modulate gene regulation and animal development Includes information on Nuclear receptors coactivators and corepressors Membrane receptors kinases and phosphorylation on cascades Hormonal regulation of development Calcium channels and neurotransmitters Chromatin transcription factors and regulation of gene expression JAK STAT pathways Hormone regulated development and gene knock out

Hormones and Reproduction of Vertebrates David O. Norris, Kristin H. Lopez, 2010-11-25 This series of volumes represents a comprehensive and integrated treatment of reproduction in vertebrates from fishes of all sorts through mammals It is designed to provide a readable coordinated description of reproductive basics in each group of vertebrates as well as an introduction to the latest

trends in reproductive research and our understanding of reproductive events Whereas each chapter and each volume is intended to stand alone as a review of that topic or vertebrate group respectively the volumes are prepared so as to provide a thorough topical treatment across the vertebrates Terminology has been standardized across the volumes to reduce confusion where multiple names exist in the literature and a comprehensive glossary of these terms and their alternative names is provided A complete essential and up to date reference for research scientists working on vertebrate hormones and reproduction and on animals as models in human reproductive research Covers the endocrinology neuroendocrinology physiology behaviour and anatomy of vertebrate reproduction Structured coverage of the major themes for all five vertebrate groups allows a consistent treatment for all Special chapters elaborate on features specific to individual vertebrate groups and to comparative aspects similarities and differences between them **Principles of Bone Biology** John P.

Bilezikian, Lawrence G. Raisz, T. John Martin, 2008-09-29 Principles of Bone Biology provides the most comprehensive authoritative reference on the study of bone biology and related diseases It is the essential resource for anyone involved in the study of bone biology Bone research in recent years has generated enormous attention mainly because of the broad public health implications of osteoporosis and related bone disorders Provides a one stop shop There is no need to search through many research journals or books to glean the information one wants it is all in one source written by the experts in the field The essential resource for anyone involved in the study of bones and bone diseases Takes the reader from the basic elements of fundamental research to the most sophisticated concepts in therapeutics Readers can easily search and locate information quickly as it will be online with this new edition *The Endometrium* John D. Aplin, Asgerally T

Fazleabas, Stanley R Glasser, Linda C Giudice, 2008-04-07 The first edition of The Endometrium was a landmark publishing event in reproductive biology and medicine Many important developments have occurred in the field and this new edition has been substantially updated and expanded to include new topics with an improved format With the addition of several new authors and topics the Second Edition of Mammary Tumor Cell Cycle, Differentiation, and Metastasis Robert B.

Dickson, Marc E. Lippman, 2012-12-06 Mammary Tumor Cell Cycle Differentiation and Metastasis is the fifth volume since 1988 in a series designed to broadly examine current advances in the cellular and molecular biology of breast cancer As in previous volumes the editors have invited recognized experts in cutting edge topics to provide a chapter focused on their area of research The editors have turned to the researchers who study rodent models of the disease and to those who study the cellular and molecular basis of human breast cancer The first section of the book is devoted to new mouse models of mammary development and tumorigenesis The second section moves to studies of human breast cancer and focuses on receptors signalling and the cell cycle The final section deals with defective tissue interactions in human breast cancer We are now in a period of extremely rapid accumulation of data on the molecular and cellular biology of breast cancer These findings are highlighted in chapters from Mammary Tumor Cell Cycle Differentiation and Metastasis Advances in Cellular

and Molecular Biology of Breast Cancer The Endometrium Stanley R. Glasser, John D. Aplin, Linda C. Giudice, Siamak Tabibzadeh, 2002-05-16 The Endometrium is devoted to a comprehensive multi disciplinary account of the uterine endometrium This book is the first to define the regulatory biological interrelationships between epithelial and stromal cell phenotypes endothelial cells extracellular matrix and immunobiological elements It highlights their relevance to clinical conditions **Hormonal Carcinogenesis III** Jonathan J. Li, Sara A. Li, Janet R. Daling, 2012-12-06 Since our previous symposium in 1995 the pace of research in hormones and cancer has accelerated Progress in our understanding of hormonal carcinogenic processes has been a direct result of the advances made in cell biology endocrinology and carcinogenesis at the molecular level The newer fields of molecular genetics and cytogenetics already have and are expected to continue to play a major role in furthering our understanding of the cellular and molecular events in hormonal carcinogenesis It has become increasingly clear that the risk of naturally occurring sex hormones in carcinogenic processes both in human and in animal models requires only minute quantities of hormones at both the serum and tissue levels Moreover hormone target tissues for neoplastic transformation perhaps with the exception of the liver generally have relatively modest ability to metabolize sex hormones such as the breast and prostate Table 1 summarizes the serum and in most cases the tissue levels of sex hormones both endogenously and exogenously ingested which are associated with increased risk for endocrine associated cancers such as breast endometrium and prostate as well as the hormone levels of four experimental models that have been shown to elicit high tumor incidences In contrast to the human in which the hormone levels are cyclic however the latter require continuous hormone exposure at these relatively low levels Endocrinology of Pregnancy Fuller W. Bazer, 2012-12-06 A comprehensive cutting edge review of the complex interactions between maternal and fetal placental tissues that control the establishment and maintenance of pregnancy the proper development of the fetus the birth process and the behavioral aspects of bonding between mother and newborn Expert researchers review the endocrine and physiological events that culminate in the delivery of offspring and provide a solid base of comparative information on the menstrual cycle of primates including humans They also discuss the sources and functions of both steroid and protein hormones from the placenta and the details of their effects on uterine function placental development fetal growth and well being and maternal responses to pregnancy This book will become the standard reference source not only for reproductive scientists but also for those clinicians who want better to understand the complex factors that affect pregnancy and their pregnant patients
