Ultra-wideband Radar Technology James D. Taylor,2018-10-03 In 1995 James D Taylor's Introduction to Ultra Wideband Radar Systems introduced engineers to the theory behind a promising new concept for remote sensing Since then the field has undergone enormous growth with new applications realized and more applications conceptualized at a remarkable pace However understanding ultra wideband UWB radar requires a new philosophical approach Concepts such as radar cross section will have new meanings as range resolution becomes smaller than the target Ultra Wideband Radar Technology is a guide to the future of radar by an international team of experts They present the problems solutions and examples of UWB radar remote sensing Chapters discuss the theory and ideas for future systems development and show the potential capabilities The writers present concepts such as the differences between UWB and conventional radars improving over resolved target detection receivers and waveforms micropower systems high power switching and bistatic radar polarimetry Finding comparable information elsewhere might require consulting hundreds of other books technical journals and symposium proceedings Ultra Wideband Radar Technology offers a unique opportunity to explore the theory applications and technology of UWB radar within a single source

Ultrawideband Phased Array Antenna Technology for Sensing and Communications Systems Alan J. Fenn,Peter T. Hurst,2015-04-10 Practical ultrawideband phased array technology used in airborne and ground based systems applications Ultrawideband phased array antennas are an enabling technology for many ground based and airborne communications and radar systems This book surveys electromagnetic theory and phased array antenna theory and provides examples of ultrawideband phased array antenna technology It describes some of the research on ultrawideband phased arrays undertaken by the authors and their colleagues at MIT Lincoln Laboratory over the last ten years The book focuses on experimental prototype ultrawideband phased array technology developed at Lincoln Laboratory for applications in the VHF and UHF bands from approximately 100 MHz to 1 GHz and addresses dipole monopole loop and other antenna array elements It offers examples of antennas for both airborne and ground vehicle applications Most of the examples are developed in the context of rapid prototyping for quick assessment of communications and radar systems feasibility with measurements and numerical electromagnetic simulation results provided for many prototype examples The book is intended primarily for practicing antenna engineers radar engineers and communications engineers and for graduate students and researchers in electrical engineering Readers

Stutzman's 3rd edition of *Antenna Theory and Design* provides a more pedagogical approach with a greater emphasis on computational methods. New features include additional modern material to make the text more exciting and relevant to practicing engineers: new chapters on systems, low profile elements and base station antennas, organizational changes to improve understanding, more details to selected important topics such as microstrip antennas and arrays and expanded measurements topic DDC Retrieval and Indexing Terminology Defense Documentation Center (U.S.), 1975 **Radio**

Frequency Identification Paulo Crepaldi, Tales Pimenta, 2017-11-29 Radio frequency identification (RFID) is one of the modern names that is becoming increasingly popular as a result of many years of researches and investigations. Powerful hardware and software tools have contributed and still do to place the radio frequency identification as a popular and widely used technology from large corporations to individuals and custom applications. Although RFID offers many advantages over other technologies, it is essential to be aware of its limitations. Therefore, it will be possible to overcome the limitations and to increase its applications. As an example, cost, safety, security, transmissions, formats and international standards are important merit figures of continuous improvement. In this book, we present important proposals that will certainly contribute to the evolution of RFID. Theoretical and practical aspects are presented and discussed by the authors and thus we invite everyone for a pleasant reading **Introduction to Modern EW Systems, Second Edition** Andrea De Martino, 2018-06-30 In

Technology Beyond NEXRAD,2002-08-31 Weather radar is a vital instrument for observing the atmosphere to help provide weather forecasts and issue weather warnings to the public The current Next Generation Weather Radar NEXRAD system provides Doppler radar coverage to most regions of the United States NRC 1995 This network was designed in the mid 1980s and deployed in the 1990s as part of the National Weather Service NWS modernization NRC 1999 Since the initial design phase of the NEXRAD program considerable advances have been made in radar technologies and in the use of weather radar for monitoring and prediction The development of new technologies provides the motivation for appraising the status of the current weather radar system and identifying the most promising approaches for the development of its eventual replacement The charge to the committee was to determine the state of knowledge regarding ground based weather surveillance radar technology and identify the most promising approaches for the design of the replacement for the present Doppler Weather Radar This report presents a first look at potential approaches for future upgrades to or replacements of the current weather radar system The need and schedule for replacing the current system has not been established but the committee used the briefings and deliberations to assess how the current system satisfies the current and emerging needs of the operational and research communities and identified potential system upgrades for providing improved weather forecasts and warnings The time scale for any total replacement of the system 20 to 30 year time horizon precluded detailed investigation of the designs and cost structures associated with any new weather radar system The committee instead noted technologies that could provide improvements over the capabilities of the evolving NEXRAD system and recommends more detailed investigation and evaluation of several of these technologies In the course of its deliberations the committee developed a sense that the processes by which the eventual replacement radar system is developed and deployed could be as significant as the specific technologies adopted Consequently some of the committee s recommendations deal with such procedural issues
