Solar System Radio Astronomy Jules Aarons, 2012-12-06 The Ionospheric Institute of the National Observatory of Athens has had two interests in recent years the study of the ionosphere and the study of the sun In our previous Advanced Study Institutes in 1960 1961 and 1962 we have emphasized the ionosphere For the Advanced Study Institute of 1964 however we invited Dr Jules Aarons of the Air Force Cambridge Research Laboratories to collaborate in preparing and directing a program of studies of the sun the moon the planets and the interplanetary medium The lectures of this Advanced Study Institute form essentially an advanced course in radio astronomy Without being a textbook on the matter we feel that the present book can be considered as an excellent reference for those students starting their research work in the field of solar system radio astronomy All lecturers tried to present their subjects in a simple form based upon their extensive personal experience but without emphasizing their personal research We must recognize that it was an excellent achievement for them to keep their text exactly at the level indicated by the Program Director and outlined by the general program of Advanced Study Institutes of NATO We are deeply grateful to all the invited scientists for their outstanding contributions in lecturing on their subjects in a clear and authoritative manner The Scientific Affairs Division of NATO in its aid to basic research sponsors various programs Among them is the Program of Advanced Study Institutes A Survey of Radio Observations of Solar Eclipses John P. Castelli, 1965 *Radio Physics of the Sun* M. R. Kundu, T.E. Gergely, 1980-06-30 For over 35 years radio astronomical techniques have made an impressive series of advances in our understanding of solar phenomena However although the subject has been partially discussed in Paris Symposium on Radio Astronomy in 1958 NASA GSFC Symposium on Physics of Solar Flares in 1963 and the IAU Symposium No 57 on Coronal Disturbances in 1973 there has not been a major international meeting dedicated to Radio Physics of the Sun This is the first major symposium on the subject held under the auspices of the International Astronomical Union It was jointly sponsored by IAU Commission 40 Radio Astronomy and by IAU Commission 10 Solar Activity It was also sponsored by the Solar Physics Division of the American Astronomical Society This volume contains the proceedings of this meeting IAU Symposium No 86 on Radio Physics of the Sun that was held in College Park Maryland August 7-10 1979 The Scientific Organizing Committee of the Symposium consisted of M R Kundu chairman G A Dulk O Hachenberg M Kuperus D J McLean D Melrose M Pick J L Steinberg T Takakura A Tlamicha and V V Zheleznyakov The topics and speakers were chosen in order to emphasize the current observational material with particular reference to centimeter wavelength observations of a few arc second resolution fast two dimensional pictures of the sun at meter decimeter wavelengths and the recent advances in plasma and radiation theory *Fourth Symposium on Chemical Evolution and the Origin and Evolution of Life* Robert A. Written by two prominent figures in radio astronomy this well established graduate level textbook is a thorough introduction to radio telescopes and techniques It is an invaluable overview for students and researchers turning to radio astronomy for the first time The first half of the book describes how radio telescopes work from basic antennas and single aperture dishes through to full aperture synthesis arrays It includes reference material on the fundamentals of astrophysics and observing techniques The second half of the book reviews radio observations of our galaxy stars pulsars radio galaxies quasars and the cosmic microwave background This third edition describes the applications of fundamental techniques to newly developing radio telescopes including ATA LOFAR MWA SKA and ALMA which all require an understanding of aspects specific to radio astronomy Two entirely new chapters now cover cosmology from the fundamental concepts to the most recent results of WMAP **Interferometry in Radioastronomy and Radar Techniques** R. Wohlleben,H. Mattes,Th. Krichbaum,2012-12-06

In recent years aperture synthesis and interferometry have become very powerful tools in radioastronomy Investigation of distant galaxies for example have revealed structures with sizes of less than a kiloparsec In general the study of galaxies has benefited from the great power of these techniques Radar applications have also dramatically increased their quality by using the interferometry principle Tracking and airborne radar can now determine position and velocity of objects with a much higher accuracy This book describes in the first six short chapters the basics of interferometry and aperture synthesis The following two long chapters treat the aspects of radioastronomical interferometers and radar applications of interferometry in great detail The text offers readers a very good opportunity to familiarize themselves with the mathematical background of these very complex techniques For researchers and students in radioastronomy and electrical engineering
