## **Radioactive Waste Management:**

**Radioactive Waste Management**, 1995-04 *Radioactive Waste Management* James Saling, 2018-04-27 This reviews sources of radioactive waste and introduces radioactive decay and radiation shielding calculations It covers technical and regulatory aspects of waste management with discussion questions at the end of each chapter to provide an opportunity to explore the many facets of waste management issues An extensive reference list at the end of each chapter retains the references from the first edition of the book and incorporates references used in preparing this revised text giving readers an opportunity to look at historical records as well as current information

**Low-Level Radioactive Waste Management and Disposition** National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Nuclear and Radiation Studies Board, Planning Committee on Low-Level Radioactive Waste Management and Disposition: A Workshop, 2017-06-05 The Department of Energy's Office of Environmental Management DOE is responsible for the safe cleanup of sites used for nuclear weapons development and government sponsored nuclear energy research Low level radioactive waste LLW is the most volumetrically significant waste stream generated by the DOE cleanup program LLW is also generated through commercial activities such as nuclear power plant operations and medical treatments The laws and regulations related to the disposal of LLW in the United States have evolved over time and across agencies and states resulting in a complex regulatory structure DOE asked the National Academies of Sciences Engineering and Medicine to organize a workshop to discuss approaches for the management and disposition of LLW Participants explored the key physical chemical and radiological characteristics of low level waste that govern its safe and secure management and disposal in aggregate and in individual waste streams and how key characteristics of low level waste are incorporated into standards orders and regulations that govern the management and disposal of LLW in the United States and in other major waste producing countries This publication summarizes the presentations and discussions from the workshop

Improving the Regulation and Management of Low-Activity Radioactive Wastes National Research Council, Division on Earth and Life Studies, Board on Radioactive Waste Management, Committee on Improving Practices for Regulating and Managing Low-Activity Radioactive Wastes, 2003-10-14 Low activity radioactive wastes include a broad spectrum of materials for which a regulatory patchwork has evolved over almost 60 years These wastes present less of a radiation hazard than either spent nuclear fuel or high level radioactive waste Low activity wastes however may produce potential radiation exposure at well above background levels and if not properly controlled may represent a significant chronic and in some cases an acute hazard For some low activity wastes the present system of controls may be overly restrictive but it may result in the neglect of others that pose an equal or higher risk The purpose of this interim report is to provide an overview of current low activity waste regulations and management practices Improving the Regulation and Management of Low Activity Radioactive Wastes Interim Report on Current Regulations Inventories and Practices identifies gaps and inconsistencies that suggest areas for

improvements The final report will assess options for improving the current practices and provide recommendations

Radioactive Waste Management In The 21st Century William R Roy, 2021-06-10 The safe management of radioactive wastes is of paramount importance in gaining both governmental and societal support for nuclear energy The scope of this new textbook is to provide a comprehensive perspective on all types of radioactive wastes as to how they are created classified characterized and disposed Written to emphasize how geology and radionuclide chemistry impact waste management this book is primarily designed for engineers who have little background in geology with low level wastes decommissioning wastes high level wastes and spent nuclear fuel This textbook provides the most up to date information available on waste management in several countries The content of this work includes transporting radioactive materials to disposal facilities The textbook cites numerous case studies to illustrate past practices current methodologies and to provide insights on how radioactive wastes may be managed in the future An international perspective on waste management is also provided to help the readers better understand the diversity in approaches while highlighting what many countries have in common Review questions for classroom use are provided at the end of each chapter Related Link s

**Disposition of High-Level Waste and Spent Nuclear Fuel** National Research Council, Division on Earth and Life Studies, Board on Radioactive Waste Management, Committee on Disposition of High-Level Radioactive Waste Through Geological Isolation, 2001-07-05 Focused attention by world leaders is needed to address the substantial challenges posed by disposal of spent nuclear fuel from reactors and high level radioactive waste from processing such fuel The biggest challenges in achieving safe and secure storage and permanent waste disposal are societal although technical challenges remain Disposition of radioactive wastes in a deep geological repository is a sound approach as long as it progresses through a stepwise decision making process that takes advantage of technical advances public participation and international cooperation Written for concerned citizens as well as policymakers this book was sponsored by the U S Department of Energy U S Nuclear Regulatory Commission and waste management organizations in eight other countries

*Disposition of High-Level Radioactive Waste Through Geological Isolation* National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Board on Radioactive Waste Management, 1999-10-07 During the next several years decisions are expected to be made in several countries on the further development and implementation of the geological disposition option The Board on Radioactive Waste Management BRWM of the U S National Academies believes that informed and reasoned discussion of relevant scientific engineering and social

issues can and should play a constructive role in the decision process by providing information to decision makers on relevant technical and policy issues A BRWM initiated project including a workshop at Irvine California on November 4 5 1999 and subsequent National Academies report to be published in spring 2000 are intended to provide such information to national policy makers both in the U S and abroad To inform national policies it is essential that experts from the physical geological and engineering sciences and experts from the policy and social science communities work together Some national programs have involved social science and policy experts from the beginning while other programs have only recently recognized the importance of this collaboration An important goal of the November workshop is to facilitate dialogue between these communities as well as to encourage the sharing of experiences from many national programs The workshop steering committee has prepared this discussion for participants at the workshop It should elicit critical comments and help identify topics requiring in depth discussion at the workshop It is not intended as a statement of findings conclusions or recommendations It is rather intended as a vehicle for stimulating dialogue among the workshop participants Out of that dialogue will emerge the findings conclusions and recommendations of the National Academies report

**Geological Disposal of Radioactive Wastes and Natural Analogues** W. Miller,R. Alexander,N. Chapman,John C McKinley,J.A.T. Smellie,2000-11-09 Many countries are currently exploring the option to dispose of highly radioactive solid wastes deep underground in purpose built engineered repositories A number of surface and shallow repositories for less radioactive wastes are already in operation One of the challenges facing the nuclear industry is to demonstrate confidently that a repository will contain wastes for so long that any releases that might take place in the future will pose no significant health or environmental risk One method for building confidence in the long term future safety of a repository is to look at the physical and chemical processes which operate in natural and archaeological systems and to draw appropriate parallels with the repository For example to understand why some uranium orebodies have remained isolated underground for billions of years Such studies are called natural analogues This book investigates the concept of geological disposal and examines the wide range of natural analogues which have been studied Lessons learnt from studies of archaeological and natural systems can be used to improve our capabilities for assessing the future safety of a radioactive waste repository **Radioactive Waste Management** Great Britain. Department of the Environment,1984 **Decision-making and Radioactive Waste Disposal** Andrew Newman,Gerry Nagtzaam,2015-11-19 The International Atomic Energy Agency estimates that nuclear power generation facilities produce about 200 000 cubic meters of low and intermediate level waste each year Vital medical procedures industrial processes and basic science research also produce significant quantities of waste All of this waste must be shielded from the population for extended periods of time Finding suitable locations for disposal facilities is beset by two main problems community responses to siting proposals are generally antagonistic and as a result governments have tended to be reactive in their policy making Decision making and Radioactive Waste Disposal explores these issues utilizing a linear

narrative case study approach that critically examines key stakeholder interactions in order to explain how siting decisions for low level waste disposal are made Five countries are featured the US Australia Spain South Korea and Switzerland This book seeks to establish an understanding of the political economic environmental legal and social dimensions of siting across those countries This valuable resource fills a gap in the literature and provides recommendations for future disposal facility siting efforts The book will be of interest to students and scholars of environmental law justice management politics energy and security policy as well as decision makers in government and industry

**The Road to Yucca Mountain** J. Samuel Walker,2009 Examines the United States government s efforts to deal with the technical and political problems associated with radioactive waste describing various approaches used by the U S Atomic Energy Commission to deal with radioactive waste sites throughout the country

**Nuclear Waste Management Strategies** Mark H. Sanders,Charlotta E. Sanders,2019-10-16 Nuclear Waste Management Strategies An International Perspective presents worldwide insights into nuclear waste management strategies from a technical engineering perspective with consideration for important legal aspects It provides a one stop comprehensive analysis of both historical and up to date nuclear waste management strategies while consulting important legal aspects of decision making and implementation processes With case studies from around the world this book provides a unique understanding of nuclear waste management technologies and methods available ensuring that researchers and engineering professionals are equipped with the right knowledge to design build implement and improve their own waste management strategies This book will benefit those researching and learning in the nuclear energy sector especially those specializing in nuclear waste management strategies as well as technical and legal communities within nuclear and environmental areas It is also a valuable resource for lawmakers and regulatory bodies concerned with nuclear policy and waste management Provides a one stop location for reference material on nuclear waste management strategies from around the world Focuses on the associated technical engineering elements of planning for and implementing waste management strategies Includes real life examples from Europe North America South America Asia the Middle East and Africa

**The Principles of Radioactive Waste Management** International Atomic Energy Agency,1995 This Safety Fundamentals document should complement national standards and criteria in the development of radioactive waste management programmes in Member States It encompasses all aspects of radioactive waste management from waste minimization to disposal and sets out objectives and principles for the protection of human health and the environment present and future Please note this publication is superseded by SF 1

**The Impact of Low-Level Radioactive Waste Management Policy on Biomedical Research in the United States** National Research Council,Commission on Life Sciences,Board on Radiation Effects Research,Committee on the Impact of Low-Level Radioactive Waste Management Policy on Biomedical Research in the United States,2001-02-09 The National Research Council s Committee on the Impact of Low Level Radioactive Waste Management Policy on Biomedical Research in the United States was called on to assess the effects

of the low level radioactive waste management policy on the current and future activities of biomedical research This report provides an assessment of the effects of the current management policy for low level radioactive waste LLRW and resulting consequences such as higher LLRW disposal costs and onsite storage of LLRW on the current and future activities of biomedical research That assessment will include evaluating the effects that the lack of facilities and disposal capacity and rules of disposal facilities have on institutions conducting medical and biological research and on hospitals where radioisotopes are used for the diagnosis and treatment of disease

**Civilian Nuclear Waste Disposal** Mark Holt,2012-10-07      *Nuclear Waste Management Facilities Rehab* O Abdel Rahman,2024-02-24

*Nuclear Waste Management Facilities Advances Environmental Impacts and Future Prospects* examines best practices and recent trends in improving nuclear safety and reducing the negative environmental impacts of nuclear waste With strong emphasis on regulatory requirements this reference is essential for designing new integrated waste management practices using lessons learned from historical and current practices Divided into three key sections Part One introduces the reader to the safety and environmental impacts of the nuclear industry Part Two reviews recent technological and methodological approaches to enhancing safety as well as reducing the carbon footprint of both individual processes and integrated facilities Topics covered include waste processing transmutation and decommissioning Part Three consider potential management schemes for special waste from innovative sources and wastes that contain emerging contaminants including waste recycling opportunities

*Nuclear Waste Management Facilities Advances Environmental Impacts and Future Prospects* is a crucial tool needed to implement the safest and most environmentally considerate best practices within nuclear waste management facilities Presents recent approaches used to assess and improve the safety and reduce the environmental impacts of nuclear waste management facilities Offers technical guidance to support the development and defense of the environmental impact assessment EIA and Safety Cases to support the waste management facilities licensing throughout their lifecycles Highlights the future perspectives for wastes produced from innovative reactors and wastes containing emerging contaminants and recycling opportunities
