First 20 years of radiocarbon dating: an annotated bibliography 1948-1968, by DIMITR POLACH. P 164, 4 tables, 1 fig, index. Canberra, 1979 (Australian Natl Univ, Radiocarbon Dating Research Laboratory).—As Frederick Johnson, author of the first radiocarbon bibliography, published in *Radiocarbon* (1959, v 1, p 199-214) observed, the diversity of interests and application of natural radiocarbon measurements makes literature retrieval difficult, and continued proliferation of journals, conference proceedings, monographs, and reports, as well as indexing and abstracting services, compounds the problem.

Dimitr Polach has compiled a valuable reference, focusing on early radiocarbon literature for the period 1948-1968, a period not covered by existing bibliographic resources. Even though this is a pilot project, restricted to about 1/3 of the English publications for the period covered, the 1000 entries present a broad and balanced array of radiometric topics. The bibliography is divided into 14 categories: bibliographical works, theory and theoretical research, techniques and instrumentation, general geology, glacial geology, ocean studies, pleistocene, archaeology-Africa, archaeology-America, archaeology-Asia, archaeology-Europe, archaeology-Oceania, conference symposia, date lists.

The study includes a survey of 8 computer data retrieval systems, using 1978 as a test year. Of 566 items retrieved, only 218 (<39 percent) were relevant or unique and 83 were duplicate retrievals. This implies a fairly high noise level in terms of retrieval time and effort, as well as a very low incidence (<15 percent) of multiple listing in separate data bases.

Computer data bases produced only about 50 percent of the projected total publications, ranging from 7.5 percent for date lists to 65 percent for geologic references to an unacceptable low of 16 percent for archaeologic sites. *Radiocarbon* was among the casualties, as neither date lists nor technical articles from this journal were recovered from the data bases tested.

The dispersion of radiocarbon citations among several data bases, as well as the obviously inadequate coverage shown by the test searches demonstrate both the relevance and utility of the bibliographic approach in Mr Polach's pilot study.

Searching of computer data bases is time-consuming and expensive and, at a projected 4000+ publications per year by 1980, with a growth rate of 5 percent, the task of keeping up with one's field will increasingly require specialized bibliographies and computer-assisted retrieval.

Radiocarbon Dating Literature The First 21 Years 1947 1968 An Annotated Bibliography:

Radiocarbon Dating Literature Dilette Polach, 1988 Although the technique of radiocarbon dating has been established and used as a research tool in a variety of fields since the late 1940s no serious effort has been made to compile a comprehensive annotated bibliography of the literature devoted to radiocarbon dating and its applications This is partly due to the multi disciplinary aspect of the topic causing indexing of radiocarbon dating literature to be scattered in a variety of abstracting services and scientific fields and also partly due to the rapid and constant growth of the literature This makes searching for literature on the general topic of radiocarbon dating a very cumbersome task Radiocarbon dating appears as an indexed subject only since 1965 however current literature shows that early works are still widely referred to indicating their importance as foundation and framework for new research Thus the selected range of the bibliography 1947 1968 fills the gap not covered by indexing services or computer information retrieval This bibliography lists over 2800 articles in the English language and the bibliography is divided into 14 chapters Within the chapters the entries are in alphabetical order by title The bibliography also has three indexes which offer access to material by author subject and geographical names

Radiocarbon Dating R.E. Taylor, Ofer Bar-Yosef, 2016-06-03 This volume is a major revision and expansion of Taylor's seminal book Radiocarbon Dating An Archaeological Perspective It covers the major advances and accomplishments of the ^{14}C method in archaeology and analyzes factors that affect the accuracy and precision of ^{14}C based age estimates In addition to reviewing the basic principles of the method it examines ^{14}C dating anomalies and means to resolve them and considers the critical application of ^{14}C data as a dating isotope with special emphasis on issues in Old and New World archaeology and late Quaternary paleoanthropology This volume again a benchmark for ^{14}C dating critically reflects on the method and data that underpins in so many cases the validity of the chronologies used to understand the prehistoric archaeological record

Field Methods in Archaeology Thomas R Hester, Harry J Shafer, Kenneth L Feder, 2016-09-16 Field Methods in Archaeology has been the leading source for instructors and students in archaeology courses and field schools for 60 years since it was first authored in 1949 by the legendary Robert Heizer Left Coast has arranged to put the most recent Seventh Edition back into print after a brief hiatus making this classic textbook again available to the next generation of archaeology students This comprehensive guide provides an authoritative overview of the variety of methods used in field archaeology from research design to survey and excavation strategies to conservation of artifacts and record keeping Authored by three leading archaeologists with specialized contributions by several other experts this volume deals with current issues such as cultural resource management relations with indigenous peoples and database management as well as standard methods of archaeological data collection and analysis
