radiometric validation is growing rapidly in importance both because of the advent of operational satellite missions for routine environmental monitoring and because of the rapid expansion in the number of satellite missions including CubeSat constellations with limited cal val resources This enhanced need for radiometric validation data covering a wide VIS NIR SWIR range e g 380 2400nm preferably with a hyperspectral resolution must be met by new techniques and hardware particularly ground based automated radiometry

Microwave Radiometer Systems Niels Skou,D. M. Le Vine,2006 Thoroughly revising and updating an Artech House classic from 1989 this authoritative resource offers you a comprehensive and current understanding of radiometer systems and shows you how to design a system based on given specifications taking into account both technical aspects and geophysical realities The second edition contains a wealth of new material including coverage of two of today s hottest microwave radiometry topics polarimetric measurements and aperture synthesis The book provides you with a complete explanation of radiometer sensitivity and describes the concept of absolute accuracy and it s associated problems The four major radiometer principles total power Dicke noise injection and correlation are presented in detail and their sensitivities are derived from the basic sensitivity formula provided in the book Additionally you find detailed review of the DTU noise injection radiometer system
