Human Reliability and Error in Transportation Systems Balbir S. Dhillon, 2007-07-11 Each year billions of dollars are being spent to develop manufacture and operate transportation systems such as aircraft ships trains and motor vehicles throughout the world During their operation thousands of lives are lost annually due to various types accidents Needless to say approximately 70 to 90 percent of transportation crashes are the result of human error to a certain degree Moreover it may be added that human errors contribute significantly to most transportation crashes across all modes of transportation Human Reliability and Error in Transportation Systems is the first book to cover the subject of human reliability across all types of transportation system The material will be accessible to readers with no previous knowledge in the field and is supported with a full explanation of the necessary mathematical concepts together with numerous examples and test problems

Engineering Systems Olivier L. De Weck, Daniel Roos, Christopher L. Magee, 2011 An overview of engineering systems that describes the new challenges posed for twenty first century engineers by today s highly complex sociotechnical systems Engineering for much of the twentieth century was mainly about artifacts and inventions Now it s increasingly about complex systems As the airplane taxis to the gate you access the Internet and check email with your PDA linking the communication and transportation systems At home you recharge your plug in hybrid vehicle linking transportation to the electricity grid Today s large scale highly complex sociotechnical systems converge interact and depend on each other in ways engineers of old could barely have imagined As scale scope and complexity increase engineers consider technical and social issues together in a highly integrated way as they design flexible adaptable robust systems that can be easily modified and reconfigured to satisfy changing requirements and new technological opportunities Engineering Systems offers a comprehensive examination of such systems and the associated emerging field of study Through scholarly discussion concrete examples and history the authors consider the engineer s changing role new ways to model and analyze these systems the impacts on engineering education and the future challenges of meeting human needs through the technologically enabled systems of today and tomorrow
