The Ecology of Trees in the Tropical Rain Forest I. M. Turner,2001-07-05 Our knowledge of the ecology of tropical rain forest trees is limited with detailed information available for perhaps only a few hundred of the many thousand of species that occur Yet a good understanding of the trees is essential to unravelling the workings of the forest itself This book aims to summarise contemporary understanding of the ecology of tropical rain forest trees The emphasis is on comparative ecology an approach that can help to identify possible adaptive trends and evolutionary constraints and which may also lead to a workable ecological classification for tree species conceptually simplifying the rain forest community and making it more amenable to analysis

Riches of the Rain Forest Wendy Veevers-Carter,1991 Even to a botanist the rain forests of the tropics consist of a bewildering variety of plants and plant forms most of them woody and tall and therefore bearing their flowers and fruits discretely out of sight in the dense high canopy Animal and bird life is arboreal heard but not often seen while the insects fungi and bacteria at work are specialized studies in themselves In this eminently readable book the author brings together an interesting collection of vignettes on plant and animal life in the rain forests of Malaysia and Indonesia the richest in numbers of species in the world Each plant chosen exemplifies some aspect of the wonderful web of

rain forest life Evolving and proliferating through millions of years the complex interrelationships of a rain forest can be admired or destroyed by human beings but never replaced The author cogently illustrates the basic principles of rain forest ecology which in its intricate complexity makes of any rain forest a wonder of the natural world and uses examples throughout to develop a passionate plea for conservation The book is elegantly illustrated with color plates drawn by Mohamed Anwar of the Bogor Herbarium and line drawings by the author herself Australian Rain-forest Trees William Douglas Francis,1929 Fast Facts: Mysterious Rain Forests Editors of Kingfisher,2016-03-15 An introduction to the wide range of life in the world s tropical rainforests conveys facts about such topics as the biggest snakes the varieties of rainforest trees and the creatures who live in the high canopies **Tropical Forest Community Ecology** Walter Carson,Stefan Schnitzer,2011-08-31 Historically tropical ecology has been a science often content with descriptive and demographic approaches which is understandable given the difficulty of studying these ecosystems and the need for basic demographic information Nonetheless over the last several years tropical ecologists have begun to test more sophisticated ecological theory and are now beginning to address a broad array of questions that are of particular importance to tropical systems and ecology in general Why are there are so many species in tropical forests and what mechanisms are responsible for the maintenance of that vast species diversity What factors control species coexistence Are there common patterns of species abundance and distribution across broad geographic scales What is the role of trophic interactions in these complex ecosystems How can these fragile ecosystems be conserved Containing contributions from some of the world s leading tropical ecologists **Tropical Forest Community Ecology** provides a summary of the key issues in the discipline of tropical ecology Includes contributions from some of the world s leading tropical ecologists Covers patterns of species distribution the maintenance of species diversity the community ecology of tropical animals forest regeneration and conservation of tropical ecosystems **Reproductive Ecology of Tropical Forest Plants** K.S. *Changes and Disturbance in Tropical Rainforest in South-East Asia* D. M. Newbery, T. H. Clutton-Brock, Ghilleen T. Prance, Royal Society (Great Britain), 2000 Views on the dynamics of tropical forests are changing rapidly with the recognition that their environment is variable on the decadal to century scale Fluctuating climatic conditions partly determine tropical forest structure species composition and dynamics Tropical communities are also highly contingent in space and time with respect to site and historical factors Tropical forests have experienced to some degree this disturbance regime in the past but climatologists are now predicting increasingly frequent extreme events in the new century The combination of increasing deforestation and land use conversion by man plus an increasingly variable environment means a situation that could be very difficult to manage
