Carers' Stories Gill Constable, 2014-07-08 It is estimated that 750 000 people are living with dementia in the UK and 500 000 partners family members and friends are involved in caring for someone with dementia at a value of 6 billion a year if care was provided by health and social care services Department of Health 2009 This book is about hearing the stories of six carers half the carers identified as lesbian or gay The findings were illuminating as the carers did not experience the person with dementia as a burden but rather found contact with health and social care services to be burdensome due to the fragmentation of services an absence of knowledge about carers entitlements and care services seeing the dementia first rather than the person Positive aspects in the relationships between the carers and the cared for endured This book is relevant to anyone who supports a person with dementia in a paid or unpaid capacity or has a role in the provision or commissioning of services and wants to understand better the policy context and most importantly the strategies that support people with dementia to maintain a sense of identity and wellbeing

Realising Participation Kathryn Roberts, Tom Chapman, 2017-10-05 This title was first published in 2001 During the last twenty years government rhetoric in the UK has increasingly advocated that statutory health and social care services should regard and treat recipients as consumers in the same way as companies and organizations in the private sector This involves a considerable cultural change on the part of both service providers and their clients and this timely study explores the extent to which such a cultural change is actually taking place in British society The utilization of welfare services by a sample of people aged 70

and above on discharge from inpatient care and in a short period afterwards is examined as a critical testbed for key components of consumerism including participation representation access choice information and redress The book explores not only the extent to which opportunities are being provided for users to play an active role in their care but also their degree of willingness to assume such a role By investigating the experiences of clients from a generation which might be considered relatively resistant to a more active participation in health and social care the study offers an important insight into the extent to which a real social transformation is indeed taking place in the British welfare services
