Resolving Social Conflicts Kurt Lewin,1948 The major theme of this book is the influence of the group to which an individual belongs the ground for his perceptions his feelings and his actions *The Observation of Human Systems* Joshua W. Clegg,2017-12-02 Contemporary mainstream psychology has moved toward methodological specificity bounded by instrumental experimentalism However this institutional reduction of sanctioned methods has not been fully embraced by all social scientists nor even by all experimental psychologists The social sciences are rife with examples of practicing empirical scientists disaffected with the reductionism and atomism of traditional experimentalism The empirical theory and practice of four of these disaffected social scientists Lev Vygotsky James Baldwin James Gibson and Kurt Lewin is explored in this volume Each of the scientists considered here argued for a rigorously empirical method while still maintaining a clear anti reductionist stance They justified their disaffection with the dominant psychological paradigms of their respective eras in terms of a fidelity to their phenomena of study a fidelity they believed would be compromised by radical reductionism and ontological atomism The authors in this collection explore the theory and practice of these eminent researchers and from it find inspiration for contemporary social science The primary argument running through these analyses is that the social sciences should take seriously the notion of holistic empirical investigation This means among other things re establishing the indissoluble ties between theory method and procedure and resisting the manualization of research procedures It also means developing theories of relations and not simply of elemental properties Such theories would concern particular units fields or systems of relations and not be reduced to or interpreted in the terms of other systems Finally a holistic social science requires integration of the active agent into theory method and procedure an integration that points toward both participatory and emancipatory methods *Investigating Human Interaction through Mathematical Analysis* Kurt T. Brintzenhofe,2023-01-16 Investigating Human Interaction through Mathematical Analysis offers a new and unique approach to social intragroup interaction by using mathematics and psychophysics to create a

mathematical model based on social psychological theories It draws on the work of Dr Stanley Milgram Dr Bibb Latane and Dr Bernd Schmitt to develop an algebraic expression and applies it to quantitatively model and explain various independent social psychology experiments taken from refereed journals involving basic social systems with underlying queue like structures It is then argued that the social queue as a resource system containing common pool resources meets the eight design principles necessary to support stability within the queue Making this link provides a means to advance to more complex social systems It is envisioned that if basic social systems as presented can be modeled then with further development more complex social systems may eventually be modeled for the purpose of identifying and validating social structures that might eventually support stable governments in our common environment called Earth This is a fascinating reading for academics and advanced students interested in political theory detection theory social psychology organizational behavior psychophysics and applied mathematics in the social and information sciences The Open Access version of this book available at www.taylorfrancis.com has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license

The Disappearance of the Social in American Social Psychology John D.

Greenwood, 2003-11-24 The Disappearance of the Social in American Social Psychology is a critical conceptual history of American social psychology In this challenging work John Greenwood demarcates the original conception of the social dimensions of cognition emotion and behaviour and of the discipline of social psychology itself that was embraced by early twentieth century American social psychologists He documents how this fertile conception of social psychological phenomena came to be progressively neglected as the century developed to the point that scarcely any trace of the original conception of the social remains in contemporary American social psychology In a penetrating analysis Greenwood suggests a number of subtle historical reasons why the original conception of the social came to be abandoned stressing that none of these were particularly good reasons for the neglect of the original conception of the social By demonstrating the historical contingency of this neglect Greenwood indicates that what has been lost may once again be regained

Dynamic Process Methodology in the Social and Developmental Sciences Jaan Valsiner, Peter C. M. Molenaar, Maria C.D.P. Lyra, Nandita Chaudhary, 2009-07-09 All psychological processes like biological and social ones are dynamic. Phenomena of nature, society, and the human psyche are context bound, constantly changing, and variable. This feature of reality is often not recognized in the social sciences where we operate with averaged data and with homogeneous stereotypes and consider our consistency to be the cornerstone of rational being. Yet we are all inconsistent in our actions within a day or from one day to the next, and much of such inconsistency is of positive value for our survival and development. Our inconsistent behaviors and thoughts may appear chaotic, yet there is generality within this highly variable dynamic. The task of scientific methodologies, qualitative and quantitative, is to find out what that generality is. It is the aim of this handbook to bring into one framework various directions of construction of methodology of the dynamic processes that exist in the social sciences at the beginning of the 21st century. This handbook is set up to bring together pertinent methodological scholarship from all over the world and equally from the quantitative and qualitative orientations to methodology. In addition to consolidating the pertinent knowledge base for the purposes of its further growth, this book serves the major educational role of bringing practitioners, students, researchers, and professionals interested in applications the state of the art know how about how to think about extracting evidence from single cases and about the formal mathematical/statistical tools to use for these purposes.

Complex Human Dynamics Andrzej Nowak, Katarzyna Winkowska-Nowak, David Brée, 2013-01-08 This book, edited and authored by a closely collaborating network of social scientists and psychologists, recasts typical research topics in these fields into the language of nonlinear dynamic and complex systems. The aim is to provide scientists with different backgrounds (physics, applied mathematics, and computer sciences) with the opportunity to apply the tools of their trade to an altogether new range of possible applications. At the same time, this book will serve as a first reference for a new generation of social scientists and psychologists wishing to familiarize themselves with the new methodology and the thinking in complexity.

More Examples, Less Theory Michael Billig, 2019-10-03 By examining key psychologists from the past, this book shows why examples are so important and theory is overvalued.

The Non-Linearity of Peace Processes Daniela Körppen, Norbert Ropers, Hans J. Giessmann, 2011-08-30 Systemic thinking in peacebuilding. This is the first comprehensive publication analysing the value added by integrating systemic thinking and peacebuilding theory and practice. Against the background of different case studies, practitioners and scholars frame their various understandings of systemic thinking and present a great variety of systemic concepts such as systems theory, systemic action research, and constellation work. Furthermore, this volume links current discussions about peacebuilding with various systemic discourses. It analyses to what extent systemic thinking and systemic methods are helpful in further developing existing approaches to conflict transformation. In addition, most recent debates in the peacebuilding field (e.g. on liberal peace, the relevance of conflict analysis for strategy planning, bridging the attribution gap, the non-linearity of conflict dynamics, etc.) are taken

account of **Centrality of History for Theory Construction in Psychology** Sven Hroar Klempe, Roger Smith, 2016-11-03 This book offers a comprehensive overview of the purpose of history for psychology Its purpose is to ask why history should be of concern to psychologists in teaching and research and in theory and in practice The future position of humanities subjects is currently highly debated on all fronts Chapters focus on the arguments from psychologists upgrade the precision and quality of discussion and thus provide a base for affirming the place of history of psychology in the broad field of psychological activity A fundamental question dominates the discussion Is the purpose of the history of psychology to serve current psychology rather than to contribute to historical knowledge and to enter large debates about what historical knowledge means for being human If the answer is yes as most psychologists who come to the issues will presume in what ways Are these ways philosophically grounded or do the social and political conditions of power and funding in universities dominate the arguments In this volume the contributors demonstrate the relation between historical investigations and current practice Featured topics include The history of psychology and its relation to feminism The history of psychology and its relation to current research assessment and curriculum The history of science and its relation to psychology The metalanguage for psychology Case studies of history in theory construction Centrality of History for Theory Construction in Psychology will be of interest to psychologists professors graduate psychology students and scholars in the human sciences

Research and Critical Psychology Martin Dege, 2023-06-06 This book examines the theoretical developments in the field of Action Research from a historical perspective The central focus of the investigation is the concepts of democracy and subjectivity as defined by the field s various traditions To address this issue this book offers a thorough investigation of the theoretical and historical underpinnings of Action Research in order to argue that such a clarification allows for a transcendence of the distinction between theory and practice in political action This transcendence will be achieved with the

theories of the German critical psychologist Klaus Holzkamp and his interpretation of subjectivity and democracy Holzkamp establishes a comprehensive mode of change based on the contradiction of existing possibilities for action and restrictions in a concretely given empirical situation This book is aimed at History of Psychology Classes Social Workers Activism Researchers Undergraduate Courses in Critical Thinking and Political Action and Decolonial Theory in Psychology
