Resource Competition James P. Grover, 2012-12-06 As one of the most quantitative of ecological subdisciplines resource competition is an important central area of ecology Recently research into this area has increased dramatically and resource competition models have become more complex The characterisation of this phenomenon is therefore the aim of this book Resource Competition seeks to identify the unifying principles emerging from experimental and theoretical approaches as well as the differences between organisms illustrating that greater knowledge of resource competition will benefit human and environmental welfare This book will serve as an indispensable guide to ecologists evolutionary biologists and environmental managers and all those interested in resource competition as an emerging discipline **Resource**

Competition and Community Structure David Tilman, 2020-03-31 One of the central questions of ecology is why there are so many different kinds of plants and animals Here David Tilman presents a theory of how organisms compete for resources and the way their competition promotes diversity Developing Hutchinson's suggestion that the main cause of diversity is the feeding relations of species this book builds a mechanistic resource based explanation of the structure and functioning of ecological communities In a detailed analysis of the Park Grass Experiments at the Rothamsted Experimental Station in England the author demonstrates that the dramatic results of these 120 years of experimentation are consistent with his theory as are observations in many other natural communities The consumer resource approach of this book is applicable to both animal and plant communities but the majority of Professor Tilman's discussion concentrates on the structure of plant communities All theoretical arguments are developed graphically and formal mathematics is kept to a minimum The final chapters of the book provide some testable speculations about resources and animal communities and explore such problems as the evolution of super species the differences between plant and animal community diversity patterns and the cause of plant succession *Ethnicity and Resource Competition in Plural Societies* Leo A. description available for *Ethnicity and Resource Competition in Plural Societies* Dialogue to address the roots of resource competition: Lessons for policy and practice Ratner, B.D.[Author]; Burnley, C.[Author]; Mugisha, S.[Author]; Madzudzo, E.[Author]; Oeur, Il[Author]; Mam, K.[Author]; Rüttinger, L.[Author]; Chilufya, L.[Author]; Adriázola, P.[Author], Conflict management is an intrinsic element of natural resource management and becomes increasingly important amid growing pressure on natural resources from local uses as well as from external drivers such as climate change and international investment If policymakers and practitioners aim to truly improve livelihood resilience and reduce vulnerabilities of poor rural households issues of resource competition and conflict management cannot be ignored This synthesis report summarizes outcomes and lessons from three ecoregions Lake Victoria with a focus on Uganda Lake Kariba with a focus on Zambia and Tonle Sap Lake in Cambodia Partners used a common approach to stakeholder engagement and action research that we call Collaborating for Resilience In each region partners assisted local stakeholders in developing a shared

understanding of risks and opportunities weighing alternative actions developing action plans and evaluating and learning from the outcomes These experiences demonstrate that investing in capacities for conflict management is practical and can contribute to broader improvements in resource governance

Competition and Coexistence Ulrich Sommer, Boris Worm, 2002 The global loss of biodiversity has led to a renewed interest in the underlying mechanisms that explain spatial differences and temporal change of diversity This book synthesises recent advances in our understanding of interactions that enhance or diminish coexistence among competing species It features an innovative spatial view of competition and coexistence The chapters are logically grouped and stitched together by the central organising principle of spatial distribution and mobility of competing species and their resources The text also covers ecological modelling and experimental evidence in the search for general principles across ecosystems from lake plankton and rocky shore benthos to grasslands and insects Back cover

Plant Competition in a Changing World Judy Simon, Susanne Schmidt, 2017-06-22 Competitiveness describes a key ability important for plants to grow and survive abiotic and biotic stresses Under optimal but particularly under non optimal conditions plants compete for resources including nutrients light water space pollinators and other Competition occurs above and belowground In resource poor habitats competition is generally considered to be more pronounced than in resource rich habitats Although competition occurs between different players within an ecosystem such as between plants and soil microorganisms our topic focusses on plant plant interactions and includes inter specific competition between different species of similar and different life forms and intra specific competition Strategies for securing resources via spatial or temporal separation and different resource needs generally reduce competition Increasingly important is the effect of invasive plants and subsequent decline in biodiversity and ecosystem function Current knowledge and future climate predictions suggest that in some situations competition will be intensified with occurrence of increased abiotic e g water and nutrient limitations and biotic stresses e g mass outbreak of insects but competition might also decrease in situations where plant productivity and survival declines e g habitats with degraded soils Changing interactions climate change and biological invasions place new challenges on ecosystems Understanding processes and mechanisms that underlie the interactions between plants and environmental factors will aid predictions and intervention There is much need to develop strategies to secure ecosystem services via primary productivity and to prevent the continued loss of biodiversity This Research Topic provides an up to date account of knowledge on plant plant interactions with a focus on identifying the mechanisms underpinning competitive ability The Research Topic aims to showcase knowledge that links ecological relevance with physiological processes to better understanding plant and ecosystem function

Pastoral Resource Competition in Uganda Frank Emmanuel Muhereza, Peter O. Otim, 2002 In the Ankole region the overriding concern since the colonial period has been the commercialization of livestock production through the introduction of commercial ranching The lack of success in this endeavor is due not only to the political and economic crises over the years but to a failure to

understand the underlying bottlenecks faced by the various categories of cattle keepers In pastoral Karamoja the proliferation of firearms has had a profound impact on the organization of herd management The inherent military organization of the harding cooperatives forced the Ngakarimojong people to adapt not only to changes in their physical environment but also to regional factors This study examines the two issues that figure large in contemporary Ugandan agricultural and political studies ranching and pastoral institutions where the cattle move with seasons and droughts **Bay Cities and Water Politics** Sarah S. Elkind,1998 Combining insights from urban western and environmental history Elkind examines the ways that people s reactions to their natural surroundings drive both demand for improved public services and political reform She traces public works development in the Gilded Age and Progressive Era to explain how these programs united each city with its suburban neighbors creating new political entities and allowing Boston and Oakland to appropriate rural resources and thus overcome the environmental limits to their continued growth and prosperity She also shows how when the power of regionalism is turned to urban development environmental and social costs are sometimes overlooked
