Shock and the Adult Respiratory Distress Syndrome Wolfgang J. Kox, David J. Bihari, 2012-12-06 The interrelated syndromes of shock and the adult respiratory distress to attract the attention of both clinical and syndrome ARDS continue laboratory scientists This reflects both the size of the problem and its unresponsiveness to current lines of treatment Doubtless a greater appreciation of the underlying pathophysiological disturbances during the past two decades has led to appropriate action and increased survival in the early stages but once established these syndromes have remained remarkably immune to a wide spectrum of therapeutic modalities This observation stresses the importance of prevention but also indicates the need for continued research into the nature of the established syndromes and the means whereby they may be reversed Drs Kox and Bihari are to be congratulated on bringing together within the covers of this volume many of the acknowledged European

experts in these two fields of investigation Each author has provided an up to date account of his current experimental and clinical research and their combined contributions makes fascinating reading Undoubtedly these are exciting times in the development of understanding of shock and ARDS Inevitably more questions are raised than answers provided but the accumulated knowledge presented here adds significantly to our understanding of this complex biological jigsaw From this corporate endeavour will come the clinically useful developments of the future and with them the ultimate hope that the term refractory shock may be finally removed from our vocabulary **Acute Respiratory Distress Syndrome** James A. the key roles deregulated systemic inflammation and coagulation play in this devastating clinical syndrome Despite substantial advances in our understanding of the pathogenesis of ARDS until recently little progress had been made in uncovering clinical strategies to improve the outcome of patients with ARDS However over the past 10 years protective ventilation and other supportive management strategies have been identified that markedly improve the outcome in ARDS More recently research has identified patients at risk for the development of the syndrome Currently clinical trials are underway
