**Applied Ethics in Animal Research** John P. Gluck, Tony DiPasquale, F. Barbara Orlans, 2002 This volume is a collection of chapters all contributed by individuals who have

presented their ideas at conferences and who take moderate stands with the use of animals in research. Specifically the chapters bear of the issues of notions of the moral standings of animals, history of the methods of argumentation, knowledge of the animal mind, nature and value of regulatory structures, how respect for animals can be converted from theory to action in the laboratory. The chapters have been tempered by open discussion with individuals with different opinions and not audiences of true believers. It is the hope of all that careful consideration of the positions in these chapters will leave reader with a deepened understanding, not necessarily a hardened position. *In the Name of Science* F. Barbara

Orlans, 1993-07-08 Few arguments in biomedical experimentation have stirred such heated debate in recent years as those raised by animal research. In this comprehensive analysis of the social, political and ethical conflicts surrounding the use of animals in scientific experiments, Barbara Orlans judges both ends of the spectrum in this debate: unconditional approval or rejection of animal experimentation to be untenable. Instead of arguing for either view, she thoughtfully explores the ground between the extremes and convincingly makes the case for public policy reforms that serve to improve the welfare of laboratory animals without jeopardizing scientific endeavor. This book presents controversial issues in a balanced manner based on careful historical analysis and original research. Different mechanisms of oversight for animal experiments are compared and those that have worked well are identified. This compelling work will be of interest to biomedical scientists, ethicists, animal welfare advocates and other readers concerned with this critical issue.
