A Study in Earth's Geological Evolution Nikolay O. Sorokhtin, Nikolay E. Kozlov, Viktor N. Glaznev, Eugeny V. Martynov, 2020-09-09 A valuable resource for geologists, engineers and students across multiple disciplines, this is the most comprehensive and in-depth study of the development of the Baltic Shield, its features as a representative of other similar areas around the world and the implications for practical applications such as oil and ore production. Like Sorokhtin's most recent book *The Origins of Natural Diamonds*, also available from Wiley Scrivener at www.wiley.com, this is not just the story of the origin and evolution of the Baltic Shield but a story about the evolution of the Earth's geology in general. Important to geologists, geophysicists and engineers across multiple disciplines, written by experts on the Earth's geological evolution, this volume represents the state of the art in major Earth geological processes. Of particular importance to mining engineers and petroleum engineers, it is also a practical guide for those who work in the mining or petroleum industry. Before presenting the most in-depth discussion of the Baltic Shield available and its implications for study by geologists and various industries such as the petroleum industry, the authors present a theory for how the Earth, as we know it, came into existence and developed. They base this theory on scientific evidence and mathematical models, using this as a basis for further explanation of the Earth's geological evolution. Valuable as either a learning tool for the student or as a reference or refresher for the veteran scientist or engineer, the authors explain important geological processes such as the Earth's origin, composition and structure, the Earth's energy balance, continental drift, tectonic activity, the evolution of the Earth's crust and others. It is within this geological framework that the authors offer practical guidance for engineers and scientists who work in industry or academia. It is a must-have for any geologist, geophysicist or engineer working in mining or petroleum engineering.
