First Responder Careers Expose Individuals to Higher Risks of Developing Trauma Some careers include a higher likelihood of experiencing traumatic events that can lead to the development of PTSD Serving in the military is a high risk factor for developing PTSD However combat veterans develop PTSD at different rates depending on the severity and length of exposure to traumatic experiences There are also high incidences of reported sexual harassment and sexual abuse in the military As a result the rates of PTSD are relatively high compared to the overall prevalence in the general population Not only can law enforcement officers

experience direct threats and stressful conditions but they also regularly witness the devastating effects of assaults robberies kidnappings and violent events However individuals in this profession have lower than expected rates of PTSD surprisingly An estimated 20 percent overall may result from having access to counseling and rigorous pre employment screenings EMTs and paramedics are routinely exposed to life threatening incidents and have more health problems than individuals in other occupations PTSD rates in this group are as high as 20 percent PTSD prevalence in this profession is comparable to law enforcement Firefighters conduct paramedic activities and are the first responders to natural disasters Firefighting is a dangerous profession that exposes workers to stressful conditions and traumatic events ranging from threats to their safety and experiencing the devastating effects of catastrophes As a result the prevalence of PTSD in this group can be as high as 20 percent Volunteer firefighters may have even higher rates because they don t have access to the same level of support as career firefighters Healthcare workers especially those working in emergency rooms and intensive care units are also at higher risk For example nurses working in critical care units are more likely to develop PTSD than nurses in other groups In addition while senior level nurses report fewer PTSD symptoms than junior ones they report higher rates of burnout Finally healthcare workers exposed to patients that have experienced violence such as an assault victim are more likely to develop PTSD than surgeons who treat assault victims Rescue workers medical workers and volunteers who act as first responders during disasters witness the aftermath of horrific events and can even become involved in severe traumatic events The prevalence of PTSD in these individuals has been estimated to be between 15 and 30 percent Journalists who work as war correspondents are at higher risk of being injured killed or kidnapped Their lifetime prevalence of PTSD which can be as high as 30 percent reflects their lack of access to support and PTSD treatment options Transit and train operators are frequently exposed to physical threats and witness suicide incidents such as person under train events Exposure to these traumatic and threatening circumstances can be a daily or weekly occurrence Bus drivers are more prone to PTSD because they have more direct contact with the general public than train drivers locked in secure train cabs In these high risk professions the incidence of trauma declines when policies are in place to debrief victims give victims immediate access to counseling and screen for individuals at high risk of having adverse reactions to traumatic conditions

Polyvagal Theory Stephen W. Porges, Deb Dana, 2018-06-12 Innovative clinicians share their experiences integrating Polyvagal Theory into their treatment models Clinicians who have dedicated their work to bringing the benefits of the Polyvagal Theory to a range of clients have come together to present Polyvagal Theory in a creative and personal way Chapters on a range of topics from compassionate medical care to optimized therapeutic relationships to clinician's

experiences as parents extract from the theory the powerful influence and importance of cases and feelings of safety in the clinical setting. Additionally, there are chapters which elaborate on the principle of safety in clinical practice with children with abuse histories, explain the restorative consequences of movement rhythm and dance in promoting social connectedness and resilience in trauma survivors, explain how Polyvagal Theory can be used to understand the neurophysiological processes in various therapies, discuss dissociative processes and treatments designed to experience bodily feelings of safety and trust, examine fear of flying and how using positive memories as an active bottom-up neuroceptive process may effectively down-regulate defense, shed light on the poorly understood experience of grief. Through the insights of innovative and benevolent clinicians whose treatment models are Polyvagal informed, this book provides an accessible way for clinicians to embrace this groundbreaking theory in their own work.

The Role of Will in Addiction and Recovery Shelby Boone, 2004-04-29. In *The Role of Will in Addiction and Recovery*, Ms Boone addresses the puzzling, contradictory and misunderstood will with clarity and compassion. Her wisdom and intuition breathe life and understanding into an abstraction that has baffled humanity for ages. Ms Boone fleshes out will and the reader consciously experiences will as a concrete reality. Conscious awareness of will is the first step toward its proper use. Will is a spiritual organ. Learning right use of will is an arduous task for us on our spiritual journey. Will is a powerful spiritual tool we can use judiciously to accomplish anything our heart desires when we come to understand it and respect its sacred nature. Ms Boone provides specific exercises designed to help the reader develop qualities of will that can be used to arrest addictions and create a meaningful life. In a bold stroke of insight and genius, Ms Boone locates the specific area of the brain through which will operates. It is in this same location that addictions take root and become equated with other survival behaviors such as eating, breathing, and procreating. This discovery provides powerful insight and believable evidence for addiction as a disease, not a moral failing.
