Mapping Psychic Reality James Rose, 2018-05-08 This book is about how we can deepen our understanding of subjectivity through the use of the concept of triangulation Fundamentally this book seeks to address the question of how we can be objective about subjectivity If psychology as a scientific discipline is concerned with the study of human experience which is essentially subjective then we are faced with the problem of how apply the scientific method as it is commonly understood If experience is essentially unique to the experiencer then there seems to be a basic incompatibility with the scientific method As currently practised this method searches for psychic phenomena which can be validly measured e.g. intelligence showing a range of individual differences But this does not enable us to examine individual experience An individual's experience seems to become impenetrable because generalisation across different individuals experience entails the loss of individuality in the generalisation
