Seabirds And Other Marine Vertebrates Competition Predation And Other Interactions:

Seabirds & Other Marine Vertebrates Joanna Burger, 1988 Many marine biologists have concentrated on the species approach to the study of marine vertebrates Although it has long been recognized that species interact it has been far easier to study that interaction from the viewpoint of only one of the participants Recently biologists have tried to study interactions from the viewpoint of all participants Because of the high visibility of birds it is easy to observe their interactions with other vertebrates such as fish porpoises and whales but it is difficult to obtain quantitative data on their interactions Seabirds and Other Marine Vertebrates the only comprehensive examination of its kind fills a particular niche that of pulling together in one place the exciting current work in marine species interactions between seabirds and other marine vertebrates The majority of essays in this work are structured to include a balance between literature review original data and synthesis They concern obvious aspects of predation competition and commensalism These topics relate directly to food acquisition and survival in a marine environment and provide paradigms for the future study of marine birds and other organisms Since man's encroachment in coastal and pelagic environments is increasing and poses a threat to marine birds a volume elucidating various aspects of their interactions has multiple uses As well as being of value to ornithologist this work should be useful to other vertebrate biologists behaviorists ecologists and managers involved with coastal planning It is a forerunner of things to come in marine biology
